MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT

June 2026

Reservoirs 1 and 2 Pump Station Upgrades Project

File No.: M21-210B2

Description: The Reservoir Upgrades Project has several components to increase the efficiency and reliability of Reservoirs 1 and 2: Chemical storage and feed systems (sodium hypochlorite and aqueous ammonia) to help reduce nitrification issues in the distribution system; Pump replacement and conversion of drivers from gas engines to electrical motors; Upgrades to reservoir electrical service through SCE; Installation of diesel generator systems to power the reservoirs in the event of an emergency; Miscellaneous system rehabilitation and upgrades including electrical gear replacement, pipeline rehabilitation, pipeline modifications, and instrument replacement based on the results of site visits and related analyses; and Slurry Dewatering Pit upgrades located at the Reservoir 1 site.

Status: Following the approval of the recommendations of the Water, Power, and Supply Chain Reliability Assessment, Mesa Water developed a design Scope of Work for the Reservoirs 1 and 2 Upgrades Project. A proposal was solicited from a CIPR on-call design consultant and the project's Preliminary and Final Design was kicked off in May 2021. The consultant delivered a draft version of Technical Memorandum No.1 – Reservoir 1 Site Master Plan and the draft Permit Plan in July 2021. Following Mesa Water's review of TM1 and the Permit Plan, the consultant began work on the Preliminary Design Report. The Preliminary Design Report was delivered in November 2021 and the Preliminary Design Report Workshop was held in September 2021. In March 2023, the Final Bid documents and cost estimate were received and reviewed by staff. After receiving approval for the project's reduced scope, the project team began modifying the Bid Documents. The revised Bid Documents were received in August 2023. Request for Bids were released to the prequalified contractors in August 2023. A job walk was conducted in August 2023 and attended by five prequalified contractors. The bid opening was held in October 2023. Four bids were received. A recommendation for contract time extension negotiation and award was approved November 2023. The contract time extension negotiation to accommodate equipment lead times was completed and Notice to Proceed was provided January 2024. A preconstruction meeting and a site walk with the contractor team were held February 2024. The construction team mobilized at Reservoir 2 in June 2024 and Reservoir 1 in October 2024. The contractor installed and started new mixers in Reservoir 2 in August 2024. At Reservoir 2, the contractor poured and coated the concrete foundation for the Reservoir chemical facility and constructed yard piping and electrical. The chemical tanks were delivered in August 2025 and anchored to the chemical pads. Work is stopped due to the impacts of the contractor-installed pipeline

MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT

June 2026

break at Reservoir 2 on October 18, 2025. The initial forensic site investigation was completed in November 2025. Testing and repair of the damaged equipment is in process. The contractor's insurance representatives inspected the damage on January 21, 2026. The forensic lab work is scheduled for July 14-15, 2026. The damaged electrical equipment and instrumentation has been repaired or replaced. Engines 1 and 3 have been repaired and the right angle gear drives were installed in June 2026. The new jockey pumps and motors were delivered in June 2026; however, the pump columns and shafts are longer than the pump cans and cannot be installed as delivered. The contractor is responsible for corrective action. The variable frequency drives were destroyed in the October 18, 2025 incident and need to be replaced by the contractor. The water in Reservoir 2 is being drained to sewer and staff is soliciting proposals for cleaning and disinfecting the tank interior. At Reservoir 1, the contractor has demolished yard structures, excavated for the new Heavy Equipment Port, Slurry Dewatering Pit, Chemical Facility, and Generator Pads. The Slurry Dewatering Pit went into operation in April 2025. After a rain delay, concrete foundations for the Heavy Equipment Port and Chemical Facility were poured in March 2025. The structural steel for the Heavy Equipment Port was received in April 2025, and the building is currently under construction. The building panels were delivered in August 2025. The contractor is coordinating with Southern California Edison for working in the vicinity of its power lines. The Air Quality Management District Permits to Construct and Operate the diesel backup generators were received in March 2025. The generator concrete pads were poured in May 2025. The generators were set on the pads in June 2025. The chemical tanks were delivered in August 2025 and anchored to the chemical pads. The electrical subcontractor is running the electrical conduits. The electrical subcontractor poured the concrete pad for the generator switchgear in April 2026. The pumps and motors were delivered to the contractor's warehouse in June 2026. The main switchboard is expected to be delivered in July 2026. Work in the Reservoir 1 Pump Station is delayed until Reservoir 2 and its Pump Station are back on line.

Local groundwater Supply Improvement Project (Local SIP)

File No.: M24-105

Description: The Local SIP will develop a feasibility study that meets the requirements of the Bureau of Reclamation's (USBR) Feasibility Study Directives and Standards (WTR 11-01) for a brackish groundwater desalination facility. The project is being conducted in partnership and cost sharing with Orange County Water District, City of Huntington Beach and City of Newport Beach.

MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT

June 2026

Status: A contract was awarded to Black & Veatch Corporation (Black & Veatch) in May 2024. The project team has completed the evaluation of aquifer zones and selected the Talbert Gap on which to focus the alternative analysis for the feasibility study. The project team has also completed modeling the potential wellfield locations, developing treatment plant footprints, the Class V level life-cycle cost for the project, and developing the preferred alternative. The Board approved a contract amendment to the Black & Veatch contract for Clean Energy Capital to perform a funding analysis. The draft Feasibility Study was received and a review workshop was held in August 2025. Preliminary comments were received from USBR in September 2025. The final Feasibility Study was submitted to USBR in September 2025. Staff received comments on the final Feasibility Study from USBR in January 2026. Mesa Water submitted the final revised Feasibility Study to USBR and received confirmation of acceptance from USBR in April 2026. In February 2026, staff met with USBR to discuss the Feasibility Study and next steps for the project and funding opportunities. Staff presented an update on the Local SIP at the April 8, 2026 Board meeting and the Spring Board workshop. Staff and the real estate consultants are actively looking for properties for the wells and the treatment plant. Staff is also working with our partner agencies for funding the next steps in the Feasibility Study and applying for grants. The Board approved an amendment to the Black & Veatch contract at the May 27, 2026 Board meeting for the next steps in the Feasibility Study. Staff is working with Black & Veatch to incorporate Orange County Water District's recent work on basin subsidence into the next steps.

Interagency Water Transfers (Newport Beach)

File No.: M25-108

Description: Conduct a feasibility study to determine if Mesa Water can reliably serve groundwater to the City of Newport Beach.

Status: A contract was awarded to MKN & Associates (MKN). The draft feasibility study was received in July 2025 and a workshop to review was held in August 2025. MKN presented the results at the September 10, 2025 Board meeting. Staff coordinated with MKN and the City of Newport Beach to design the connection. MKN submitted the 60% drawings in February 2026, which staff has provided comments on. The City of Costa Mesa issued an encroachment permit, and potholing activities were completed in February 2026. Final design was completed in March 2026 and staff has applied for the construction encroachment permit with the City. Staff is also coordinating with Southern California Edison for power for the intertie. The contracts for Engineering Support During Construction and Construction Management have been executed as of

MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT

June 2026

May 2026. The contract for Construction is is on the Board's June 24, 2026 agenda. Staff is working with MKN (now Ardurra) to finalize drawings based on coordination with SCE and the City for review/permitting. A preconstruction partnering meeting including the City and SCE is planned for June 16, 2026.

Interagency Water Transfers (Huntington Beach)

File No.: M25-101

Description: Conduct a feasibility study to determine if Mesa Water can reliably serve groundwater to the City of Huntington Beach.

Status: A Cooperative Agreement was executed with the City of Huntington Beach in October 2024. Staff received three proposals from qualified consultants in June 2025. The Board awarded a contract to MKN & Associates (MKN) in July 2025. Notice to Proceed was provided in August 2025. A kickoff meeting was held in September 2025, and supply and demand data was collected in October 2025 and as of November 2025, MKN delivered a draft Feasibility Study in December 2025, which has been reviewed by staff from Mesa Water and the City of Huntington Beach. Comments have been provided to the consultant, and MKN is incorporating revisions, including refinement of regulatory considerations and infrastructure assumptions. The project has been introduced to the Department of Drinking Water, and coordination with DDW is ongoing. In February 2026, staff received and provided comments on the Draft Final Feasibility Study and continued discussions with DDW. The Final Feasibility Study was received in March 2026 and presented to the Board at the March 11, 2026 Board meeting. MKN (now Ardurra) presented to the City of Huntington Beach's Public Works Commission in May 2026 and received a positive response. The Commissioners were invited to visit the MWRF and MWECC. Staff is working with Ardurra to outline the scope for next steps, expected to begin in June 2026.

Pipeline Integrity Program

File No.: M25-103

Description: Implement Resolution No. 1525 Replacement of Assets.

Status: Since its inception in 2015, the Pipeline Integrity Program has been implemented by staff to use pipeline condition, rather than pipeline age, to prioritize pipeline replacements. The current and previous fiscal year's progress is described in this report. In Fiscal Year (FY) 2024, the Pipeline Integrity Program Consultant reviewed mainline break data from FY 2022

MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT

June 2026

and FY 2023 and recommended condition assessment for pipeline groups with break thresholds that exceed the standards of Resolution No. 1525. These recommendations were presented to the Board in September 2023. Based on the recommendations, staff negotiated a proposal for ePulse condition assessment of 2.2 miles of AC pipe. The field work was completed in May 2024 and the report was received in July 2024. The results of the condition assessment were reviewed by the Pipeline Integrity Program Consultant. The consultant's report was received in October 2024 and reviewed by staff. No AC pipelines were recommended in the report. Additionally, Municipal Water District of Orange County (MWDOC) staff performed 100 miles of Leak Detection in May and June 2024. The final leak detection report was received in June 2024 and no mainline leaks were reported. Staff evaluated the feasibility of a condition assessment technology for small diameter metal pipelines, and has requested a proposal from a vendor. The contract for small diameter pipeline condition assessment was approved at the March 12, 2025 Board meeting. The condition assessment was attempted on June 16-17, 2025 but was not successful. Staff sent ten AC pipe samples collected in conjunction with routine work for wall thickness measurement in February 2025. The wall thickness measurements were received in April 2025 and were reviewed by staff and the Pipeline Integrity Program Consultant. No immediate pipeline replacements were suggested by the data. The Consultant's report was received in June 2025 and was reviewed by staff. MWDOC completed 100 miles of Leak Detection in May 2025. No mainline leaks were found. Permanent pressure transient monitoring at the pump stations and other strategic locations was installed in June 2025. Staff is evaluating several AI models to predict mainline breaks and prioritize pipeline replacement. A contract was awarded to HDR to continue as the Pipeline Integrity Program consultant for FY 2026. A kickoff meeting for FY 2026 work was held in September 2025. An update to the Board was presented in October 2025. An updated Replacement of Assets resolution was brought to the January 28, 2026 Board meeting and the Board's comments were incorporated. The revised Replacement of Assets resolution was brought to the February 11, 2026 Board meeting. Sixteen AC pipe samples collected as part of break repairs and valve and hydrant replacements were sent to the lab for wall thickness testing on February 24, 2026. Wall thickness results are expected in June 2026.

SCADA Needs Assessment

File No.: M26-100

MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT

June 2026

Description: Assess Mesa Water's current Supervisory Control and Data Acquisition system, compile a comprehensive asset list, and define a path forward for modernization and future system improvements.

Status: Staff developed a draft Scope of Work and incorporated feedback from expert consultants. The Request for Proposal was posted in October 2025 and six proposals were received in November 2025. An information item was provided at the December 2025 Board meeting. A contract was awarded to West Yost at the January 14, 2026 Board meeting. The contract was executed in February 2026 and the kickoff occurred in March 2026. Site visits were completed in March 2026. West Yost is reviewing SCADA related documentation and staff interviews were completed in May and June 2026.

Mesa Water Education Center Flagpole

File No.: M25-104

Description: Evaluate the most appropriate location and height of the flagpole at the Mesa Water Reliability Facility and then execute the construction of the selected flagpole.

Status: Staff received a draft report regarding the installation of a flagpole at the Mesa Water Education Center in December 2024. Staff reviewed the draft report and presented recommendations at the April 23, 2025 Board meeting. A design proposal was received in November 2025. In order to minimize the time to get the flagpole contracted and installed, a revised proposal for a single contract (design and construction) is expected in May 2026. Design details are being finalized as of June 2026.

Mesa Water Reliability Facility Electric Vehicle Charging Station

File No.: M25-105

Description: Conduct a feasibility study and preliminary cost estimate of constructing electric vehicle (EV) charging stations at the Mesa Water Reliability Facility (MWRF).

Status: Mesa Energy Systems submitted a proposal for a feasibility study in January 2026. A kickoff meeting and site visit was held in March 2026. The draft feasibility study was submitted in April 2026. Comments were provided and a revised feasibility study was received in April 2026. A review workshop was held in May 2026. The next step is evaluation of a non-binding agreement with Tesla for Tesla to determine if the location is acceptable as a Tesla charging location.

MESA WATER AND OTHER AGENCY PROJECTS STATUS REPORT
June 2026

Well Nos. 12 and 14 Power Quality Mitigation

File No.: M26-200

Description: Evaluate and implement solutions to mitigate power quality disturbances affecting Well Nos. 12 and 14. The project includes installation of power quality monitoring equipment and evaluation of technologies such as flywheel uninterruptible power supply (UPS) systems and battery energy storage systems (BESS) to maintain well operations during voltage dips, outages and Public Safety Power Shutoff (PSPS) events.

Status: In late 2025, staff began evaluating mitigation strategies for increasing power quality disturbances affecting Well Nos. 12 and 14. In December 2025, applications were submitted to the Self-Generation Incentive Program (SGIP) through Southern California Edison and Southern California Gas Company for battery energy storage systems at both well sites. Battery feasibility analysis is currently underway to evaluate system sizing, resilience benefits and long-term financial performance. The results of this analysis will be incorporated into a broader backup power technology evaluation. In March 2026, staff received a proposal from Lee + Ro to evaluate backup power technologies for Well Nos. 12 and 14, including flywheel UPS systems, battery energy storage systems, and hybrid solutions. Power quality monitoring has been installed at both well sites, and the collected data will be used to inform the feasibility analysis and technology evaluation. Contracting with Lee + Ro is complete as of May 2026. The kickoff meeting and site visits were held on May 28, 2026 and the evaluation is expected to be complete by July 2026.

Water Quality Call Report

May 2026

Date: 5/12/2026
Source: E-mail
Address: 226 Sierks Street
Description: Customer sent an online inquiry regarding chlorine taste and odor.
Outcome: Staff attempted to contact the customer by phone and email but were unable to reach them. Water from a nearby hydrant was tested, and the chlorine residual was found to be within the normal range. Staff also did not detect any unusual odor in the water.

Date: 5/12/2026
Source: Phone
Address: 2165 Raleigh Avenue
Description: Customer inquired about fluoridation, calcium, magnesium and chlorination.
Outcome: Staff explained to the customer that Mesa Water District's water meets all applicable state and federal drinking water standards. Staff also provided the customer with information regarding the average and typical range of fluoride, calcium and magnesium.

Date: 5/28/2026
Source: Phone/Visit
Address: 3068 Edgeway
Description: Customer reported discolored water.
Outcome: Staff responded to the customer's report of discolored water and advised the customer to flush their household faucets. Staff also flushed nearby hydrants and the water main in the area. The customer was satisfied with staff's response and attention to their concern.

MEMORANDUM

TO: Board of Directors
FROM: Calvin Hsu, CPA, Chief Financial Officer
DATE: June 24, 2026
SUBJECT: Monthly Financial Reports

RECOMMENDATION

Receive and file the Monthly Financial Reports.

STRATEGIC PLAN

Goal #3: Be financially responsible and transparent.

PRIOR BOARD ACTION/DISCUSSION

None.

DISCUSSION

The attached Treasurer's status reports reflect the performance of Mesa Water District's cash and investment accounts.

FINANCIAL IMPACT

None.

ATTACHMENTS

Attachment A: Monthly Treasurer's Status Report on Investments as of 5/31/2026
Attachment B: Monthly Treasurer's Status Report on Investments as of 4/30/2026

Mesa Water District
Monthly Treasurer's Status Report on Investments
5/31/2026

Investments are in compliance with the Investment Policy adopted as Resolution 1575 of the Mesa Water District Board of Directors. The liquidity of investments will meet cash flow needs for the next six months except under unforeseen catastrophic circumstances.

INVESTMENTS	YTM@Cost	Cost Value	Market Value	Maturity Date	Days to Maturity	% of Portfolio	Policy % Limit

(1) Local Agency Investment Fund | LAIF includes funds designated for allocation of working capital cash to reserves, working capital cash and advances for construction. LAIF market value on Monthly Treasurer's Status Report on Investments for months between quarters is the dollar amount invested times the fair market value Fair Value factor of prior quarter end. The general ledger LAIF carrying value reflects market value (unrealized gains and losses) only at fiscal year end. LAIF provides the Fair Value factor as of March 31, June 30, September 30 and December 31 each year. LAIF market value on this report is based on the March 31, 2026 Fair Value Factor of 0.999980831.

MEMORANDUM

TO: Board of Directors
FROM: Kaitlyn Norris, Public Affairs Supervisor
DATE: June 24, 2026
SUBJECT: Outreach Update

RECOMMENDATION

Receive and file the Outreach Update.

STRATEGIC PLAN

Goal #4: Increase public awareness of Mesa Water.

PRIOR BOARD ACTION/DISCUSSION

This item is provided monthly at a Mesa Water District (Mesa Water®) Board of Directors (Board) meeting.

DISCUSSION

Mesa Water's outreach program aims to connect the District with its constituents in order to achieve Goal #4 of the Board's Strategic Plan. Outreach activities are also designed to achieve the Strategic Plan goals related to customer service and/or regional water issues involvement by educating and informing the District's constituents about Mesa Water, water issues, and water in general. Mesa Water's constituents include external audiences, such as customers, community members, elected officials, industry colleagues, media, water districts and special districts – as well as internal audiences, such as staff, retirees and Board members.

Upcoming Fiscal Year 2026 Events

1. **Lions Club Fish Fry** – Friday & Saturday, June 26 & 27, 2026, Lions Park – 570 W. 18th Street, Costa Mesa, CA 92627
2. **Concerts in the Park** – Tuesdays, July 14, 21 & 28, 2026, Fairview Park – 2525 Placentia Avenue, Costa Mesa, CA 92626

The benefits of Mesa Water's outreach program include:

- Informing constituents about Southern California's perpetual drought, the historical drought facing California, and the importance of developing local and cost-effective sources of safe, reliable water for Mesa Water's service area and the region at large;
- Educating constituents about the importance of water and water stewardship, in order to sustain Southern California's population, quality of life, business, and economy;
- Educating constituents about Mesa Water's stewardship of ratepayer funds and financial responsibility to fund, invest in, and save for the current and future provision of safe and reliable water for the District's service area;

- Informing constituents of the District's infrastructure improvements to ensure water quality and water reliability for its service area;
- Learning from constituents and evolving as a well-informed Board of Directors;
- Promoting water use efficiency to Mesa Water's customers and community members to help them save water, money, and the environment;
- Ensuring, for public health and safety reasons, that Mesa Water customers and community members identify the District as their water provider and as the source of information about water in emergency situations;
- Supporting Mesa Water's service area as an actively involved participant in programs that provide added value and benefits to the community;
- Informing the media of Mesa Water's activities that benefit the District's customers and community;
- Empowering Mesa Water's Board and staff with information that will help them provide the best possible service to the District's customers and community members; and
- Strengthening Mesa Water's industry relations to provide opportunities for improving the District's business and operations -- including the areas of financial and human resources strength, infrastructure and technological innovation, and setting/supporting policies that have a positive impact on Mesa Water's service area -- so that the District can continue to provide safe, high-quality, reliable, and affordable water to its customers.

FINANCIAL IMPACT

In Fiscal Year 2026, \$1,139,850 is budgeted for Public Affairs Support Services; \$490,965 has been spent to date.

Satisfying our Community's
Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Stacy Taylor, Water Policy Manager
DATE: June 24, 2026
SUBJECT: Letter of Support for the Association of California Water Agencies' Vision for Our Water Future

RECOMMENDATION

Approve Mesa Water District's letter of support for the Association of California Water Agencies' "Vision for Our Water Future" initiative.

STRATEGIC PLAN

Goal #1: Provide an abundant, local, reliable and safe water supply.
Goal #2: Perpetually renew and improve our infrastructure.
Goal #3: Be financially responsible and transparent.
Goal #4: Increase public awareness of Mesa Water.
Goal #5: Attract, develop and retain skilled employees.
Goal #6: Provide excellent customer service.
Goal #7: Actively participate in regional and statewide water issues.
Goal #8: Practice continual business improvement.

PRIOR BOARD ACTION/DISCUSSION

None.

DISCUSSION

At the Association of California Water Agencies' (ACWA) Spring Conference in May 2026, ACWA launched its "Vision for Our Water Future" initiative, a statewide effort to establish a long-term, unified vision for California's water future. The initiative's intent is to elevate water as a priority issue for California's next Governor and state leaders, while promoting policies and investments necessary to ensure reliable, affordable and sustainable water supplies for future generations.

California's water agencies face increasing challenges, including aging infrastructure, regulatory complexities, population growth, prolonged droughts and weather extremes, and the need to ensure affordable and sustainable water supply reliability. ACWA developed its "Vision for Our Water Future" initiative to provide a common framework for addressing these challenges and to demonstrate broad support within California's water community for practical, science-based solutions that enhance water resilience throughout the state.

The initiative outlines key principles and priorities designed to improve California's water future, including advancement of water recycling and groundwater sustainability efforts, expansion of water supply reliability, investment in water infrastructure, protection of local water management control, and support for innovation and regional collaboration.

During and following the Spring 2026 Conference, ACWA's Board President encouraged all

member agencies to become "Vision Partners" by adopting a resolution or submitting a letter of support. By becoming a Vision Partner, Mesa Water District (Mesa Water®) would join water agencies throughout California in demonstrating a collective commitment to ensuring safe, reliable and affordable water supplies for the communities we serve.

Participation in the initiative aligns closely with Mesa Water's Strategic Plan, particularly Goal #1 (Provide an abundant, local, reliable and safe water supply) and Goal #7 (Actively participate in regional and statewide water issues). Supporting the initiative also reinforces Mesa Water's longstanding leadership role in advancing sound water policy and advocating for investments and strategies that strengthen California's water reliability.

Vision Partner agency logos will be featured in the "Partners" section on ACWA's Vision webpage and may be highlighted in ACWA outreach efforts, including in social media posts and advocacy discussions with California's gubernatorial candidates and other policymakers to demonstrate the water community's broad support for the initiative.

Additional information regarding the initiative is available in Attachment A and on ACWA's Vision webpage at ACWA.com/vision. Staff recommends the Board approve a letter of support for ACWA's "Vision for Our Water Future" initiative.

FINANCIAL IMPACT

None.

VISION

FOR OUR WATER FUTURE

Setting the Vision

The Association of California Water Agencies (ACWA) represents approximately 470 public water agencies that collectively deliver approximately 90 percent of the water used by Californians — in their homes, on their farms, and for their businesses.

Water agencies are being proactive and are on the front lines of the state's most pressing challenges — from droughts, floods, and wildfires to aging infrastructure and the need for more housing. Meaningful progress requires state partnership with local water suppliers to achieve common goals. Bold leadership from the governor is critical to setting a unified direction, accelerating action, and delivering results to prepare California for the future. Action is needed now.

Why Water Matters

Water is the foundation upon which California is built. This State is the world's fourth-largest economy, the nation's breadbasket, a global technology leader, and home to extraordinary ecosystems. None of it functions without water.

Water is not a single-sector issue. It is the backbone every other sector depends on. It determines where homes can be built, whether farms can produce, how businesses operate and grow, and whether species can survive a changing climate. A safe, reliable, and affordable water supply is one of the most important investments California can make.

ACTION IS NEEDED NOW

**Lead
on Water**

**Protect
Affordability**

**Deliver Critical
Infrastructure**

**Modernize Water
Management**

California Thrives With Water

- › **Housing:** California must plan for 2.5 million new homes in the next decade. Every unit requires a reliable water supply.
- › **Agriculture:** California agriculture is 12% of the state's economy, contributing \$60 billion; employing over 400,000 people; and producing more than half of the nation's fruits, nuts, and vegetables. Both surface and groundwater are fundamental to California's agriculture sector.
- › **Economy:** California's \$4 trillion economy spans technology, innovation, manufacturing, trade, and tourism. Every dollar of it depends on a reliable water supply.
- › **Environment:** California's extraordinary ecosystems — its rivers, wetlands, and floodplains — depend on the same water system managed by local water suppliers. A thriving California requires managing water to sustain both communities and ecosystems.
- › **Public Health:** Water suppliers are California's first line of public health defense, delivering safe, clean drinking water to every community in the state.
- › **Climate Resilience:** Climate whiplash — the swing between extreme droughts and extreme floods — is increasing, snowpack is diminishing, and wildfires are growing more severe. Water suppliers are modernizing, but they cannot do it alone.

Building A Modern System

Securing California's water future requires more than incremental fixes. It demands a fundamental shift in how the State leads, invests, and operates. The Vision for Our Water Future provides an essential framework for ensuring a resilient and reliable water system.

Funded, built, and managed for extreme conditions, our modern water system is resilient, coordinated, and flexible — meeting the needs of California's communities, economy, and environment.

- › **Anchored by Backbone Infrastructure:** The State Water Project and Central Valley Project form the foundation of the statewide water system. These assets capture and manage California's highly variable hydrology and move water where and when it is needed.
- › **Strengthened by Regional Resiliency:** Regional and watershed-based partnerships strengthen local water reliability under changing hydrologic conditions and during emergencies through coordinated planning, interconnected infrastructure, diversified supplies, and shared responsibility.
- › **Delivered Locally:** Water is delivered by local suppliers, even when conveyed through or interconnected with statewide or regional systems. Local agencies set rates and policies — ratepayers fund approximately 85% of California's water system costs — while navigating structural constraints from Proposition 218, regulatory mandates, and permitting complexity.

Key Elements of A Modern Water System

- › Designed and upgraded for the future
- › Flexible and responsive to changing climate conditions
- › Supported by aligned state permitting, regulatory, and investment frameworks
- › Informed by technology, data, and science
- › Grounded in long-term affordability

A modern water system must be resilient, coordinated, and flexible to meet California's evolving needs.

LEAD ON WATER

Recognize water as an essential resource and the infrastructure that underpins California's economy, housing growth, food production, environmental health, and community resilience. Sustained executive leadership is needed to improve water supply reliability, accelerate climate resilience, and ensure coordinated action across state government.

- **Set a Bold Water Agenda (First 100 Days):** Establish a focused statewide water agenda aligned with this Vision for Our Water Future.

- **Appoint Leaders to Deliver Results:** Appoint and empower leaders to deliver measurable outcomes.
- **Unify State Agencies:** Direct state agencies to align under unified statewide water priorities and jointly advance implementation in partnership with local, regional, and federal water managers. Designate a cabinet-level water policy executive, reporting directly to the Governor, to align agencies and organize state resources to implement California's water priorities.

PROTECT AFFORDABILITY

Ensure safe and reliable water remains affordable by strengthening sustained state investment and funding partnerships with local, regional, and federal agencies to address rising infrastructure, climate, and regulatory costs. California's ratepayers fund more than 85% of the system. Without predictable investment, these costs will increasingly fall on households, businesses, and farmers.

- **Secure Sustainable Water Funding:** Create a reliable sustainable state funding source for water infrastructure that provides predictable, long-term investment. This funding should support critical water infrastructure projects, environmental needs, and California's Human Right to Water while leveraging federal, regional, and local investment.

- **Accelerate Funding:** Improve funding programs and coordination so investments reach projects faster — reducing administrative delays, lowering project costs, and accelerating infrastructure delivery.
- **Integrate Investments Across Sectors:** Align state investments and integrate water infrastructure funding across energy, housing, and climate and hazard mitigation to advance multi-benefit projects and maximize federal, state, and regional investment.

DELIVER CRITICAL INFRASTRUCTURE

Future-proof California's critical water infrastructure to ensure reliable supplies in the face of climate change, growing economic and community demands, and escalating emergency risks. This requires strengthening the statewide water system, including both built and natural infrastructure, while advancing regional resilience to maximize systemwide reliability.

- › **Strengthen the State's Water Backbone:** Upgrade, repair, and optimize California's essential backbone infrastructure — the California State Water Project and Central Valley Project.
 - ◆ **Modernize and Protect Infrastructure:** Advance a durable Delta conveyance solution, strengthen Delta levees, safeguard critical infrastructure from subsidence and seismic risk, and upgrade system technologies — including Forecast Informed Reservoir Operations, snowpack measurement, and remote monitoring control.
 - ◆ **Improve Coordinated Operations:** Integrate operations of the California State Water Project and Central Valley Project to increase system flexibility, expand the storage and movement of water, and enhance water supply reliability.
- › **Safeguard Colorado River Water Supplies:** Protect California's Colorado River allocation, consistent with the State's legal entitlements and the efforts of the Colorado River Board of California.
- › **Empower Regional Water Solutions:** Champion regional and watershed-based solutions. State policy should empower regions with the tools, flexibility, and investment needed to advance regional planning, partnerships, and projects that diversify water supplies, strengthen system connectivity and operational efficiency, and restore ecosystem functions to ensure reliable water supplies.

MODERNIZE WATER MANAGEMENT

Improve California's regulatory and operational systems so water projects can move forward reliably and efficiently, infrastructure can be operated more flexibly, and agencies can respond more rapidly to changing conditions. California's regulatory framework should deliver clear, coordinated decisions grounded in the best available science, while maintaining environmental protections, public transparency, and California's existing water rights priority system.

- › **Improve Permitting Performance:** Enhance the clarity, coordination, and efficiency of state permitting processes to accelerate infrastructure and operational improvements; eliminate avoidable costs; and ensure state and local agencies deliver timely, accountable results.
 - ◆ **Integrate Permit Requirements:** Integrate requirements and processes across regulatory agencies to eliminate redundancy and inconsistency.
 - ◆ **Enhance Regulatory Certainty:** Establish transparent procedures, clear criteria for permit approval, and accountable timelines for agency decisions — developed in direct partnership with water suppliers.
 - ◆ **Streamline Pathways:** Create efficient pathways to advance multi-benefit, climate-resilient water supply projects.
- › **Modernize Water Operations:** Advance operational approaches that reflect changing climate realities to improve water supply reliability across environmental, agricultural, and urban sectors. This may include coordinated reservoir management, flexible diversion rules tied to real-time hydrology, accelerated groundwater recharge and conjunctive use, expanded water transfers, and other adaptive strategies.
- › **Strengthen Water Data and Science:** Invest in integrated, science-based statewide data systems and technology that improve transparency, inform real-time decisions, and strengthen regulatory and operational performance to increase efficiency and better manage water resources.

VISION
FOR OUR WATER FUTURE

Vision for Our Water Future is an initiative of the Association of California Water Agencies, representing approximately 470 public water agencies in California.

BOARD OF DIRECTORS

Marice H. DePasquale

The Association of California Water Agencies (ACWA)
Attn: Ernie Avila, President, ACWA Board of Directors
980 9th Street, Ste. 1000
Sacramento, CA 95814

Dear President Avila:

On behalf of Mesa Water District (Mesa Water®), I am writing to express our support for the Association of California Water Agencies' (ACWA) *Vision for Our Water Future* initiative and its recommendations to help guide California's water priorities under the next governor to take office in January 2027.

Water is foundational to California's communities, economy, agriculture, environment and climate resilience. As California faces increasing challenges from affordability pressures, aging water infrastructure, changing weather patterns and water policy and regulatory complexity, strong statewide leadership and coordinated action on water have never been more important.

Mesa Water supports the *Vision for Our Water Future* priorities, which call on state leaders to:

- Elevate water as a statewide priority through sustained leadership and coordinated action.
- Ensure safe and reliable water remains affordable through stable funding partnerships and streamlined investment delivery.
- Strengthen and modernize California's water infrastructure, including both built and natural systems.
- Improve regulatory, operational, and scientific frameworks to support efficient project delivery and adaptive water management.

As a local water agency, Mesa Water understands firsthand the importance of reliable and resilient water supplies to the state's people, businesses, farms and ecosystems. Local agencies are essential partners in implementing practical, science-based solutions that meet California's diverse water needs.

Providing an abundance of local, reliable, clean, safe water.

1965 Placentia Avenue Costa Mesa, CA 92627

MesaWater.org

I appreciate ACWA's leadership in bringing together water agencies and stakeholders from across the state to advance a collaborative vision for California's water future. Mesa Water looks forward to working with state leaders and regional partners to help implement policies and investments that support long-term water reliability, affordability and resilience.

Sincerely,

Marice H. DePasquale
President, Board of Directors
Mesa Water District

c: Mesa Water Board of Directors
Paul E. Shoenberger, P.E., Mesa Water General Manager
ACWA Communication Specialist Ellen Martin (ellenm@acwa.com)
ACWA Policy Analyst Jen Stein (jens@acwa.com)

Providing an abundance of local, reliable, clean, safe water.

Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Karyn Igar, P.E., Principal Engineer
DATE: June 24, 2026
SUBJECT: Newport Beach Interagency Water Transfer Project

RECOMMENDATION

Approve a contract with T.E. Roberts, Inc. for \$749,478 and a 10% contingency of \$74,948 for a total authorized amount not to exceed \$824,426 for construction of the Newport Beach Interagency Water Transfer Project, and authorize execution of the contract.

STRATEGIC PLAN

Goal #1: Provide an abundant, local, reliable and safe water supply.
Goal #2: Perpetually renew and improve our infrastructure.
Goal #3: Be financially responsible and transparent.
Goal #4: Increase public awareness of Mesa Water.
Goal #7: Actively participate in regional and statewide water issues.

PRIOR BOARD ACTION/DISCUSSION

At its April 3, 2025 workshop, the Board of Directors (Board) directed the General Manager to negotiate a contract with MKN & Associates for an amount not to exceed \$46,691 to conduct a feasibility study for an interagency water transfer from Mesa Water District to the City of Newport Beach.

At its September 10, 2025 meeting, the Board authorized the General Manager to proceed, up to his signing authority, with MKN & Associates for the Newport Beach Interagency Water Transfer cost estimate for design and construction.

At its November 12, 2025 meeting, the Board authorized the General Manager to approve contracts for an amount not to exceed \$500,000 for the construction, construction management and engineering services necessary to proceed with a new interconnection between Mesa Water District and the City of Newport Beach.

At its April 29, 2026 workshop, the Board received an update on the City of Newport Beach Interagency Water Transfer Project.

DISCUSSION

Mesa Water District (Mesa Water®) and the City of Newport Beach (Newport Beach) have completed design of a new interconnection that will allow Newport Beach to receive water from Mesa Water. The project consists of approximately 120 feet of 12-inch pipeline, a flow meter, pressure-sustaining control valve, electrical improvements, and associated appurtenances within a new precast vault. The interconnection will improve regional water supply reliability and provide Newport Beach with an alternative water source.

Staff recommends awarding a sole-source construction contract to T.E. Roberts, Inc. (T.E. Roberts) who has been involved throughout project development, including performing potholing investigations, participating in site visits and coordination meetings, and providing constructability and safety review of the design. Their early involvement helped identify potential utility conflicts, traffic control considerations and construction challenges prior to completion of the final plans. Maintaining continuity with a contractor already familiar with the project will help minimize construction risk and support timely completion of the interconnection.

Mesa Water worked with T.E. Roberts on the Vault Abandonment Project and has found them to be responsive, qualified and capable of completing the work. They have extensive experience working in the City of Costa Mesa right-of-way. T.E. Roberts is also an on-call contractor for Newport Beach and was highly recommended by the Newport Beach project team members. T.E. Roberts submitted a proposal in the amount of \$749,478 for construction of the Newport Beach Interagency Water Transfer Project. The proposal scope does not include SCADA panels required to connect the equipment to the SCADA network. Staff will bring an item to a future board meeting to approve the cost for the SCADA panels.

FINANCIAL IMPACT

In Fiscal Year 2027, \$750,000 was budgeted for the Newport Beach Interagency Water Transfer Project; no funds have been spent to date.

MEMORANDUM

TO: Board of Directors
FROM: Karyn Igar, P.E., Principal Engineer
DATE: June 24, 2026
SUBJECT: Geographic Information System Support Services

RECOMMENDATION

Approve a contract amendment with Carollo Engineers, Inc. for \$50,000, to provide Geographic Information System Support Services and Hydraulic Model Hosting and Maintenance Services from July 1, 2026 to December 31, 2026, and authorize execution of the contract.

STRATEGIC PLAN

Goal #2: Perpetually renew and improve our infrastructure.

PRIOR BOARD ACTION/DISCUSSION

At its December 11, 2012 meeting, the Board of Directors (Board) approved a contract with RBF Consulting (a company of Michael Baker International) for \$95,500 to provide Geographic Information System (GIS) Support Services.

At its August 8, 2013 meeting, the Board approved a change order with RBF Consulting in the amount of \$157,000 to provide GIS Support Services.

At its July 10, 2014 meeting, the Board approved a change order with RBF Consulting for an amount not to exceed \$133,500 to provide GIS Support Services.

At its November 12, 2015 meeting, the Board approved Change Order #3 to Michael Baker International in the amount of \$325,000 for two and a half years.

At its July 16, 2019 meeting, the Engineering and Operations Committee received an Information Item that staff was preparing a Request for Proposal for GIS Support Services.

At its October 10, 2019 meeting, the Board awarded a contract to Carollo Engineers, Inc. (Carollo) in the amount of \$140,000 per year for five years for an amount not to exceed \$700,000 with two 1-year renewal options to provide GIS and Hydraulic Model Hosting and Maintenance Services.

At its June 14, 2023 meeting, the Board approved amendments to Carollo's GIS Support and Hydraulic Model Hosting and Maintenance Services contract for Fiscal Year (FY) 2023 for an additional \$86,500 for a total annual amount not to exceed \$226,500, and an additional \$90,000 for FY 2024 for a total annual amount not to exceed \$230,000.

BACKGROUND

Mesa Water District (Mesa Water®) has developed a versatile GIS that is central to managing its infrastructure assets. GIS is used to provide as-needed maps of Mesa Water's assets, including for Mesa Water Notify. GIS also functions as the backbone for the hydraulic model, record drawings database, pipeline breaks database, pipeline integrity testing database, and demographic and parcel information database.

In October of 2019, Carollo was competitively selected to provide GIS and Hydraulic Model Hosting and Maintenance Services under a five-year contract with up to two annual renewals. Carollo has enhanced Mesa Water's GIS capabilities, including building the ArcGIS Online viewer, developing department-specific GIS mapping and applications, and providing training to staff. The Carollo GIS team also works closely with Mesa Water's Engineering department to ensure that GIS is updated when capital projects and customer developments are completed. The Carollo Hydraulic Modeling team supports Mesa Water customers with a residual pressure evaluations requirement for fire system design, as well as providing Engineering and Water Operations with insights into how distribution system flows and pressures will change under non-standard operating conditions.

In addition to the routine GIS and hydraulic modeling work, Carollo's GIS team has been instrumental in GIS support of the following Mesa Water initiatives:

- Mesa Water Notify
- Mesa Water Infrastructure Maps for the Education and Career Center
- Lead Service Line Inventory for Compliance with Environmental Protection Agency Regulations
- Hydraulic Modeling Support for Capital Improvement Projects
- Water Atlas Update
- Spatial Mapping Technology Evaluations
- Night Valve Maintenance

DISCUSSION

Carollo's GIS and Hydraulic Model Hosting and Maintenance Services contract is expiring at the end of June 2026. Carollo does not intend to propose on the next GIS and Hydraulic Modelling Request for Proposal. To facilitate the transition, Carollo has proposed a contract amendment for \$50,000 through December 31, 2026. The amendment includes continued GIS maintenance and mapping, hydraulic model runs, development of the draft scope of work, proposal review and training of the selected consultant. The proposed contract amendment is included in Attachment A. Staff recommends the Board approve a contract amendment to Carollo for \$50,000 to provide GIS and Hydraulic Model Hosting and Maintenance Services from July 1, 2026 to December 31, 2026.

FINANCIAL IMPACT

In Fiscal Year 2026, \$140,000 is budgeted for GIS and Hydraulic Model Hosting and Maintenance Services; \$119,187 has been spent to date.

In Fiscal Year 2027, \$155,000 is budgeted for GIS and Hydraulic Model Hosting and Maintenance Services.

ATTACHMENTS

None.

*Dedicated to
Satisfying our Community's
Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Kurt Lind, Business Manager
DATE: June 24, 2026
SUBJECT: Integrated Meter Reading Software Technical Support

RECOMMENDATION

Approve a three-month contract with T2 Tech Group for \$14,703 and a 10% contingency of \$1,470 for a total authorized amount not to exceed \$16,173 to provide technical support for the integrated meter reading software implementation, and authorize execution of the contract.

STRATEGIC PLAN

Goal #2: Perpetually renew and improve our infrastructure.

Goal #3: Be financially responsible and transparent.

Goal #6: Provide excellent customer service.

PRIOR BOARD ACTION/DISCUSSION

At its September 24, 2025 meeting, the Board of Directors (Board) received an Information Item regarding integrated meter reading software.

At its October 8, 2025 meeting, the Board awarded a three-year contract, with the option for two additional one-year renewals, to Ferguson Enterprises, Inc. for \$427,257.45 and a 10% contingency of \$42,725 for a total authorized amount not to exceed \$469,982.45 to secure integrated meter reading software and implementation services.

BACKGROUND

Following a competitive procurement process, Mesa Water District (Mesa Water®) selected Ferguson Enterprises, Inc. (Ferguson), the authorized distributor for Neptune Technology Group (Neptune), to deliver an integrated meter reading solution that will modernize the District's meter reading infrastructure. Ferguson emerged as the top-ranked firm from a field of qualified proposers, distinguished by the depth of their technical approach, the maturity of the Neptune platform and their demonstrated capability to support both automated and manual read configurations. The Neptune solution provides Mesa Water with a scalable, field-ready system designed to enhance read accuracy, improve operational efficiency and strengthen the District's overall meter management and inventory capabilities.

DISCUSSION

T2 Tech Group (T2) has been engaged to provide technical support for the Neptune Information Technology (IT) Integration project on a time-and-materials basis. The Neptune meter reading platform and the SpryCIS Customer Information System (CIS) are operationally linked. Meter read data collected by field staff using the Neptune mobile application is processed and presented to customers through the CIS billing workflow.

Both the Neptune/Ferguson and SpryCIS/SpryPoint implementations are now proceeding concurrently, with IT staff coordinating across both vendor engagements to ensure data compatibility and unified access control governance.

The Statement of Work with T2 defines six work packages covering the full lifecycle of the Okta integration for the Neptune platform. The project is billed on a time-and-materials basis. A summary of each work package is provided below:

No.	Work Package	Key Tasks	Deliverables
2.1	System Solution Requirements Review & Kickoff	Proposal review; stakeholder requirements meetings; prerequisite documentation; integration workflow diagram; vendor meetings; design reviews	Initial prerequisite documentation; Okta integration workflow diagram
2.2	System Lifecycle Integration with Okta (SCIM)	Configure API integration; validate user mapping and data updates; create test users; test onboarding/offboarding workflows	Configured and validated Okta SCIM provisioning for Neptune
2.3	Okta Single Sign-On (SSO) Integration	Configure SSO; validate IdP-initiated and SP-initiated login; validate sign-in following termination; confirm mobile app flow; validate security and role settings	Configured and validated Okta SAML SSO for Neptune (web and mobile)
2.4	Mobile Application Deployment	Create Neptune Mobile App in Microsoft Intune; test the application; deploy to mobile devices	Neptune Mobile App deployed to District mobile devices via Intune MDM
2.5	IT Operations Training & Handoff	Develop Operations Manual; develop User Guide; conduct team demonstrations	Operations Manual; User Guide; completed team demos and knowledge transfer
2.6	Project Management	Sprint planning; budget tracking; sprint reviews; stakeholder communications; project oversight	Project management of all tasks, budget, and stakeholder reporting

Staff recommends the Board award a three-month contract to T2 Tech Group for \$14,703 and a 10% contingency of \$1,470 for a total authorized amount not to exceed \$16,173 to provide technical support for the integrated meter reading software implementation, and authorize execution of the contract.

FINANCIAL IMPACT

Over Fiscal Years 2026 and 2027, \$500,000 is budgeted under Capital Expenditures.

ATTACHMENTS

None.

Satisfying our Community's
Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Calvin Hsu, CPA, Chief Financial Officer
DATE: June 24, 2026
SUBJECT: Guidelines for the Procurement of Goods and Services and Disbursements

RECOMMENDATION

Adopt Resolution No. 1614 Providing Guidelines for the Procurement of Goods and Services and Disbursements, Superseding Resolution No. 1589.

STRATEGIC PLAN

Goal #3: Be financially responsible and transparent.
Goal #6: Provide excellent customer service.
Goal #7: Actively participate in regional and statewide water issues.

PRIOR BOARD ACTION/DISCUSSION

At its June 14, 2023 meeting, the Board of Directors (Board) adopted Resolution No. 1581 Providing Guidelines for the Procurement of Goods and Services and Cash Disbursements. Superseding Resolution No. 1508.

At its February 14, 2024 meeting, the Board adopted Resolution No. 1589 Providing Guidelines for the Procurement of Goods and Services and Cash Disbursements, Superseding Resolution No. 1581.

DISCUSSION

Resolution No. 1589 establishes the guidelines for the procurement of goods and services for Mesa Water District (Mesa Water®) use when purchases require Board approval, and sets the controls governing disbursement of District funds. Frequent updates to these guidelines and controls strengthen Mesa Water's procurement and disbursement policy by establishing clear requirements for competitive solicitation, defining the procurement methods available for use, and outlining when written agreements are required. The policy also clarifies when Sole Source procurement is appropriate, provides guidance for emergency purchases and credit card usage, and updates Mesa Water's disbursement controls to ensure alignment with current laws, the Water Code and industry best practices.

Staff recommends the following key updates to Resolution No. 1589:

- Establish a four-year review cycle for this policy.
- Increase the maintenance service Board-approval amount from \$75,000 to \$150,000 per year.
- Provide additional clarification and definitions for key procurement terms and processes, including Competitive Solicitation, General Procurement, Capital Construction Change Orders, Sole Source Exceptions, Credit Card Use, Emergency Purchases and Temporary Labor.

- Strengthen agreement requirements by explicitly prohibiting verbal contracts, eliminating automatic contract renewals and requiring Board approval for contracts exceeding seven years.
- Establish provisions for contract signing authority.
- Incorporate formatting and grammatical revisions to improve clarity, consistency and readability throughout the resolution.

The Board will continue to review and approve a majority of the District's procurement of goods and services.

LEGAL REVIEW

Mesa Water's General Legal Counsel – Atkinson, Andelson, Loya, Ruud & Romo – has reviewed this resolution and recommends Board approval.

FINANCIAL IMPACT

None.

ATTACHMENTS

Attachment A: Draft Resolution No. 1614
Attachment B: Resolution No. 1589, Redline

RESOLUTION NO. 1614

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS PROVIDING GUIDELINES FOR THE PROCUREMENT OF GOODS AND SERVICES AND DISBURSEMENTS, SUPERSEDING RESOLUTION NO. 1589

WHEREAS, Mesa Water District (Mesa Water® or District) is a county water district organized and operating pursuant to the provisions of the laws of the State of California (State or California); and

WHEREAS, as a county water district, Mesa Water is not obligated to solicit competitive bids on its contracts for goods or services or for its construction projects; and

WHEREAS, Mesa Water's goal is to acquire needed goods and services for fair and competitive prices from reliable vendors and/or providers, as applicable; and

WHEREAS, the Board of Directors (Board) of Mesa Water District desires to adopt a policy statement relative to the procurement of goods and services, certain matters relating to public works contracts and concerning funds leaving Mesa Water's control.

NOW THEREFORE, THE BOARD OF DIRECTORS OF MESA WATER DISTRICT DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

Section 1. This Resolution establishes the guidelines for the procurement of goods and services for Mesa Water use as set forth in Attachment A, attached hereto and incorporated herein by this reference.

Section 2. This Resolution establishes the controls governing disbursement of Mesa Water funds as set forth in Attachment B, attached hereto and incorporated herein by this reference.

Section 3. This Resolution shall be effective immediately upon adoption by the Board.

Section 4. Mesa Water's General Manager and Chief Financial Officer are authorized to take such other and further actions as may be necessary or convenient to implement the directives of this Resolution.

Section 5. This Resolution shall, upon adoption, supersede Resolution No. 1589 and all other related actions of the Board governing the procurement of goods and services and disbursements as referenced herein.

Section 6. Water Code Section 30579.5 states that the Board is also authorized, subject to limitations set forth by the Board, to delegate its authority to execute contracts on behalf of the District by the "GM or an Officer of the District."

Section 7. In any situation, circumstance or emergency where both the GM and the Officers are unavailable or absent, all agreements shall be signed by the Board President and countersigned by the District Secretary, as required by Water Code Sections 30578 and 30579.

Section 8. It shall be the policy of the Board that this Resolution be reviewed by the Board every four years.

ADOPTED, SIGNED and APPROVED this 24th day of June 2026 by the following roll call vote:

Denise Khalifa
District Secretary

ATTACHMENT A

RESOLUTION NO. 1614

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS PROVIDING GUIDELINES FOR THE PROCUREMENT OF GOODS AND SERVICES AND DISBURSEMENTS, SUPERSEDING RESOLUTION NO. 1589

PROCUREMENT POLICY GUIDELINES

The use of all Mesa Water District (Mesa Water® or District) funds is subject to the Delegation of Authority to the General Manager resolution.

Authorization

The General Manager (GM) is authorized to operate Mesa Water in accordance with the approved budget.

Procurement Statement

Mesa Water's procurement objectives shall be to obtain the best quality materials, supplies, labor, services and equipment in the most optimal time frame for the minimum appropriate price. Quality of performance, as well as cost, may be considered in the procurement selection process.

Buy American-Made Preference

Mesa Water recognizes the importance of supporting domestic industries and promoting economic growth within the United States. In alignment with this commitment, Mesa Water hereby adopts a Buy American-Made Preference Policy to govern procurement activities.

Vendors participating in the procurement process with Mesa Water shall be informed that priority will be given to vendors who supply goods that are produced, manufactured or substantially transformed in the United States. American-made products will be the preference in cases where quality and availability are comparable to foreign alternatives.

Competitive Solicitation

Conducting a competitive solicitation process and signing a written agreement is required for the acquisition of all goods and services that are anticipated to cost \$25,000 or more per year. Mesa Water uses both informal and formal solicitation to ensure procurement transparency, competition and fiscal accountability.

a. **Informal Solicitation**

Informal solicitation consists of requesting written quotes from vendors. These solicitations are not required to be publicly advertised. Informal solicitation for the acquisition of all goods and services that are anticipated to cost up to \$25,000 per year requires only a single quote.

b. **Formal Solicitation**

Formal solicitation is required for goods and services with a total value exceeding \$25,000. The process involves structured, publicly advertised procurement such as Invitation for Bids, Invitation for Quotes, Request for Proposals, Request for Qualifications or Piggyback. The formal solicitation process shall be advertised for at least fourteen (14) calendar days with an exception when using Invitation for Quotes. Receiving fewer than three quotes, bids or proposals does not invalidate the solicitation process or necessitate obtaining additional submissions.

Written Agreements

- a. Written agreements are required for acquisition of goods and services that are anticipated to cost \$25,000 or more per year, including District templates such as Professional Services Agreements, piggyback contracts and purchase orders. Engagement in verbal contracts is expressly prohibited. Mesa Water does not permit automatic renewal clauses in its contracts.
- b. Splitting or separating goods and services to avoid any part of the required procurement process is prohibited.
- c. Modifications to an existing executed contract that change the entire scope of work and/or the nature of services or work products are prohibited.
- d. Any contractual agreement with a duration exceeding seven (7) years must undergo a competitive solicitation process or obtain approval from the Board before exercising any renewal options, at least 60 calendar days prior to expiration. This requirement is applicable regardless of the total contract amount.

Types of Procurement

1. GENERAL PROCUREMENT

The GM is authorized to approve the acquisition of all District goods, materials, supplies, equipment and temporary labor that were approved by the Board with the fiscal year budget.

a. Purchase:

The purchase of all District goods, materials, supplies and equipment with a total cost exceeding \$25,000 requires competitive solicitation.

b. Lease:

Leasing any goods or equipment with a total cost exceeding \$25,000 requires competitive solicitation.

c. Temporary Labor Services:

The GM is authorized to approve temporary labor services on an as needed basis without competitive solicitation.

2. CAPITAL CONSTRUCTION PROJECTS

For capital construction projects, the following will apply:

Bid and Award

Mesa Water's Board will review all bids on a project when Mesa Water staff proposes to recommend approval of a bid for a project that is anticipated to cost \$250,000 or more per bid. The Board may award the bid and authorize an amount for the project/construction that may include a contingency. Unless otherwise directed by the Board, the GM shall execute approved construction contracts.

Change Orders

- a. Change orders approval:
 - i. For originally approved Capital Construction Projects > \$250K, the GM is authorized to approve up to \$75,000 in change orders.
 - ii. For originally approved Capital Construction Projects < \$250K, the GM is authorized to approve all change orders up to a cumulative project spending of \$250,000.
- b. Handling of cumulative change orders:
 - i. For originally approved Capital Construction Projects > \$250K, if the cumulative change orders exceed \$75,000, no additional work will be allowed, until the Board authorizes additional funds for the project
 - ii. For originally approved Capital Construction Projects < \$250K, if the cumulative change orders cause the cumulative project spending to exceed \$250,000, no additional work will be allowed, until the Board authorizes additional funds for the project.
- c. The GM is authorized to approve an emergency field change order when failure to authorize the change order will cause Mesa Water to incur significant additional

costs or significant delays, even if the change order will exceed the GM's delegated authority. The GM will promptly inform the Board of such action(s) and the Board will review ratification of the GM's decision(s).

3. MAINTENANCE SERVICES

For maintenance services defined as routine, recurring and usual work for the preservation or protection of District facilities and operations, the following will apply:

- a. If the maintenance services are anticipated to cost \$150,000 or more per year, the selection of the maintenance service provider will be reviewed by the Board and will be subject to approval by the Board. The Board will authorize a budgeted amount for the specified work. Unless otherwise specified by the Board, the GM is authorized to approve and execute the agreement between Mesa Water and the approved maintenance service provider.
- b. If the cost of the work is anticipated to exceed the amount authorized by the Board, there will be no further work until the Board authorizes additional funds. The Board will review all requests for additional funds.

4. PROFESSIONAL SERVICES

When professional services are required, the following will apply:

- a. Professional service providers are defined as attorneys, engineering consultants, water quality consultants, architects, auditors, actuarial consultants, financial advisors, human resource consultants, information systems/technology consultants, public relations services, management consultants, meeting facilitators and firms hired to perform construction inspection, construction management and/or engineering surveying. If the work of a professional service provider is anticipated to cost \$75,000 or more per year, the selection of the professional service provider will be reviewed by the Board and will be subject to approval by the Board. The Board will authorize a budgeted amount for the specified work. Unless otherwise specified by the Board, the GM is authorized to approve and execute the agreement between Mesa Water and the approved professional service provider.
- b. If the cost of the work is anticipated to exceed the amount authorized by the Board, there will be no further work until the Board authorizes additional funds. The Board will review all requests for additional funds.

5. SOLE SOURCE AND EXCEPTIONS TO COMPETITIVE SOLICITATION

Any use of the Sole Source or Exceptions to Competitive Solicitation procurement process must be thoroughly documented using the District's designated form which must be approved by the GM prior to entering into a contract.

The Board will be notified, no less than annually, of all contracts entered into under the Sole Source and Exceptions Competitive Solicitation procurement process.

a. **Sole Source Procurement**

Sole Source Procurement is permitted only when a good or service is available from a single vendor with no reasonable alternatives. This method requires written justification using the District's designated form demonstrating that no other supplier can meet the specific requirements due to proprietary technology, unique capabilities or exclusive rights.

b. **Exceptions to Competitive Solicitation**

The justification to support a recommendation for the exception to competitive solicitation of the procurement of goods and services shall meet the following criteria:

- i. **Compelling Reason** - there is a compelling reason, a preferred brand or material to match existing District equipment or facilitate effective maintenance and support.
- ii. **Purchases from Piggyback** - Mesa Water may arrange to enter an agreement involving the purchase of goods or services in cooperation/piggyback with another local, county, state, federal or other public entity within the United States.
- iii. **Exceptions List** - The following purchases of goods and services do not require competitive solicitation:
 - Customer Water Meters
 - Mesa Water Utilities (electricity, water, telephone)
 - Water and water-related costs to the Orange County Water District or the Municipal Water District of Orange County
 - Temporary Labor

6. CREDIT CARDS

Credit cards are to be used when necessary to accomplish small business transactions that require immediate payment, including, but not limited to, business meals, conference/seminar registration, travel costs, District events and emergency supplies. Every department has been assigned a credit card for such purposes.

7. EMERGENCY PURCHASE, REPAIR, AND SERVICES

An emergency is a sudden and unforeseen situation that requires immediate action to protect public health or safety, prevent damage to District property or infrastructure, maintain essential services or avoid significant financial or legal risk. An emergency exists

only when the GM determines that unplanned and unexpected repairs or services are essential to the continued operation of District facilities and that using the normal procurement process would create a harmful delay.

In the event of an emergency, the GM has full authority to commit Mesa Water funds in excess of the approved budget limits, or reallocation of funds within those limits, in accordance with, and subject to, the limitations set out in the Delegation of Authority to the General Manager resolution.

The GM may make immediate purchases of materials and/or services in the event of an emergency, including any purchase required to prevent imminent danger or to prevent or mitigate the loss or impairment of life, health, property or interruption of essential public services. Any emergency expenditure shall be submitted to the Board for review and ratification within 30 days of the end of the emergency.

RESOLUTION NO. 1614

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS PROVIDING GUIDELINES FOR THE PROCUREMENT OF GOODS AND SERVICES AND DISBURSEMENTS, SUPERSEDING RESOLUTION NO. 1589

GUIDELINES FOR DISBURSEMENTS

The use and expenditure of all Mesa Water funds is subject to the Delegation of Authority to the General Manager resolution.

All checks, wires, electronic funds transfer authorizations and other documents (except petty cash requests) containing instructions that cause funds to leave Mesa Water's control shall have two authorized signatures. Authorized signers are:

Members of the Board of Directors
General Manager
Assistant General Manager
Chief Financial Officer
District Secretary
District Treasurer
Assistant District Treasurer

Facsimile signatures may be used on routine payments provided adequate safeguards are used to protect the signature plates, chip or other source. Such safeguards shall be set out in writing.

An authorized manager or supervisor can approve petty cash requests subject to the limits of Mesa Water's current petty cash policy.

The Chief Financial Officer and Controller may authorize inter-bank transfers for the purpose of satisfying payroll requirements.

The Board shall review and sign, and approve, as applicable, checks, wires and electronic funds transfer authorizations that meet the following criteria:

1. \$40,000 or more will leave Mesa Water's control except when paying for:
 - a. Payroll or payroll related expenses, including employee benefits
 - b. Utilities
 - c. Chemicals used in water treatment

ATTACHMENT B

- d. Water and water related costs to Orange County Water District or the Municipal Water District of Orange County
 - e. Debt Service Payments
- 2. California Government Code Section 53065.5 requires all special districts to disclose any reimbursements of one hundred dollars (\$100) or more for each individual charge for services or products received or paid to elected officials and/or staff within the preceding fiscal year. The individual charge can include, but is not limited to, tuition, certification or license reimbursement; meals, lodging and transportation reimbursement; or registration fee reimbursement. The disclosure requirement is fulfilled by including the reimbursement information in a document published or printed at least annually and shall be made available for public inspection.

RESOLUTION NO. ~~16141589~~

**RESOLUTION OF THE
MESA WATER DISTRICT BOARD OF DIRECTORS
PROVIDING GUIDELINES FOR THE PROCUREMENT
OF GOODS AND SERVICES AND ~~CASH~~ DISBURSEMENTS,
SUPERSEDING RESOLUTION NO. 158~~91~~**

WHEREAS, Mesa Water District (Mesa Water® ~~or District~~) is a county water district organized and operating pursuant to the provisions of the laws of the State of California (State or California); and

WHEREAS, as a county water district, Mesa Water is not obligated to solicit competitive bids on its contracts for goods or services or for its construction projects; and

WHEREAS, Mesa Water's goal is to acquire needed goods and services for fair and competitive prices from reliable vendors and/- or providers, as applicable; and

WHEREAS, the Board of Directors (Board) of ~~the~~ Mesa Water District desires to adopt a policy statement relative to the procurement of goods and services, certain matters relating to public works contracts and concerning funds leaving Mesa Water's control.

NOW THEREFORE, THE BOARD OF DIRECTORS OF ~~THE~~ MESA WATER DISTRICT DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

Section 1. This Resolution establishes the guidelines for the procurement of goods and services for Mesa Water use as set forth in Attachment A, attached hereto and incorporated herein by this reference.

Section 2. This Resolution establishes the controls governing disbursement of Mesa Water funds as set forth in Attachment B, attached hereto and incorporated herein by this reference.

Section 3. This Resolution shall be effective immediately upon adoption by the Board.

Section 4. Mesa Water's General Manager and Chief Financial Officer are authorized to take such other and further actions as may be necessary or convenient to implement the directives of this Resolution.

Section 5. This Resolution shall, upon adoption, supersede Resolution No. 1589 and all other related actions of the Board governing the procurement of goods and services and disbursements as referenced herein.

Section 6. Water Code Section 30579.5 states that the Board is also authorized, subject to limitations set forth by the Board, to delegate its authority to execute contracts on behalf of the District by the "GM or an Officer of the District."

Section 7. In any situation, circumstance or emergency where both the GM and the Officers are unavailable or absent, all agreements shall be signed by the Board President and countersigned by the District Secretary, as required by Water Code Sections 30578 and 30579.

Section 8. It shall be the policy of the Board that this Resolution be reviewed by the Board every four years.

ADOPTED, SIGNED, and APPROVED this 24th day of June~~14th day of February~~ 2026~~4~~ by the following roll call vote:

ATTACHMENT A

RESOLUTION NO. ~~16141589~~

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS PROVIDING GUIDELINES FOR THE PROCUREMENT OF GOODS AND SERVICES AND ~~CASH~~ DISBURSEMENTS, SUPERSEDING RESOLUTION NO. 158~~91~~

PROCUREMENT POLICY GUIDELINES

The use of all Mesa Water District (Mesa Water® or District) funds is subject to the Resolution No. 1507, Delegation of Authority to the General Manager resolution.

Authorization

The General Manager (GM) is authorized to operate Mesa Water in accordance with the approved budget.

Procurement Statement

Mesa Water's procurement objectives shall be to obtain the best quality materials, supplies, labor, services, and equipment in the most optimal time frame for the minimum appropriate price. Quality of performance, as well as cost, may be considered in the procurement selection process.

Buy American-Made Preference

Mesa Water recognizes the importance of supporting domestic industries and promoting economic growth within the United States. In alignment with this commitment, Mesa Water ~~District~~ hereby adopts a Buy American-Made Preference Policy to govern procurement activities.

Vendors participating in the procurement process with Mesa Water shall be informed that priority will be given to vendors who supply goods that are produced, manufactured, or substantially transformed in the United States. American-made products will be the preference in cases where quality and availability are comparable to foreign alternatives.

Competitive Solicitation

Conducting a competitive solicitation process and signing a written agreement is required for the acquisition of all goods and services that are anticipated to cost \$25,000 or more per year. Mesa Water uses both informal and formal solicitation to ensure procurement transparency, competition and fiscal accountability.

a. Informal Solicitation

Informal solicitation consists of requesting written quotes from vendors. These solicitations are not required to be publicly advertised. Informal solicitation for the acquisition of all goods and services that are anticipated to cost up to \$25,000 per year requires only a single quote.

b. Formal Solicitation

Formal solicitation is required for goods and services with a total value exceeding \$25,000. The process involves structured, publicly advertised procurement such as Invitation for Bids, Invitation for Quotes, Request for Proposals, Request for Qualifications or Piggyback. The formal solicitation process shall be advertised for at least fourteen (14) calendar days with an exception when using Invitation for Quotes. Receiving fewer than three quotes, bids or proposals does not invalidate the solicitation process or necessitate obtaining additional submissions.

Written Agreements

~~Competitive procurement and written agreements will be required for the acquisition of all goods and services that are anticipated to cost \$25,000 or more per year. Written agreements for the purposes of these Procurement Guidelines include contracts (Mesa Water Contracts) and purchase orders. The General Manager is authorized to approve and execute all agreements for the acquisition of goods and services in accordance with the approved annual budget. Written agreements within the limits set by the annual budget may be for one year, or multi-year with annual renewals. Mesa Water's policy is that contracts shall not normally include terms for automatic renewal.~~

- a. Written agreements are required for acquisition of goods and services that are anticipated to cost \$25,000 or more per year, including District templates such as Professional Services Agreements, piggyback contracts and purchase orders. Engagement in verbal contracts is expressly prohibited. Mesa Water does not permit automatic renewal clauses in its contracts.
- b. Splitting or separating goods and services to avoid any part of the required procurement process is prohibited.
- c. Modifications to an existing executed contract that change the entire scope of work and/or the nature of services or work products are prohibited.
- d. Any contractual agreement with a duration exceeding seven (7) years must undergo a competitive solicitation process or obtain approval from the Board before exercising any renewal options, at least 60 calendar days prior to expiration. This requirement is applicable regardless of the total contract amount.

Types of Procurement

1. GENERAL PROCUREMENT

~~For materials, supplies, labor, services (not including Capital Construction, Maintenance Services or Professional Services) and equipment, the following procedures will apply:~~

~~It shall be Mesa Water's goal to utilize a competitive procurement process, which includes soliciting a minimum of three written quotes, bids, or proposals, as applicable. The receipt of less than three quotes, bids or proposals shall not invalidate the solicitation process or require the solicitation of additional quotes, bids, or proposals.~~

~~Exceptions: Competitive procurement may not be required in the following situations: (1) procurement where it appears only one viable source exists, (2) there is a compelling reason, a preferred brand, material to match existing District equipment or facilitate effective maintenance and support, or (3) purchases from vendors who have been awarded the same type of purchase by a federal agency, a state agency or other public agency after a competitive procurement process.~~

~~Exceptions to competitive procurement must be deemed appropriate by the authority of the General Manager. Mesa Water District's Board of Directors (Board) will be notified annually of all contracts entered into by Mesa Water under the exceptions to competitive procurement process.~~

~~The GM is authorized to approve the acquisition of all District goods, materials, supplies, equipment and temporary labor that were approved by the Board with the fiscal year budget.~~

a. Purchase:

~~The purchase of all District goods, materials, supplies and equipment with a total cost exceeding \$25,000 requires competitive solicitation.~~

b. Lease:

~~Leasing any goods or equipment with a total cost exceeding \$25,000 requires competitive solicitation.~~

c. Temporary Labor Services:

~~The GM is authorized to approve temporary labor services on an as needed basis without competitive solicitation.~~

2. CAPITAL CONSTRUCTION PROJECTS

For capital construction projects, the following ~~procedures~~ will apply:

Bid and Award

Mesa Water's Board will review all bids on a project when Mesa Water staff proposes to recommend approval of a bid for a project that is anticipated to cost \$250,000 or more per bid. The Board may award the bid and authorize an amount for the project/construction that may include a contingency. Unless otherwise directed by the Board, the ~~General Manager~~GM shall execute approved construction contracts.

Change Orders

a. Change orders approval:

- i. For originally approved Capital Construction Projects > \$250K, the GM is authorized to approve up to \$75,000 in change orders.
- ii. For originally approved Capital Construction Projects < \$250K, the GM is authorized to approve all change orders up to a cumulative project spending of \$250,000.

~~The General Manager is authorized to approve change orders until the cumulative amount of those change orders is anticipated to exceed the amount authorized by the Board for construction by 30 percent or \$75,000, whichever is less.~~

b. Handling of cumulative change orders:

- i. For originally approved Capital Construction Projects > \$250K, if the cumulative change orders exceed \$75,000, no additional work will be allowed, until the Board authorizes additional funds for the project
- ii. For originally approved Capital Construction Projects < \$250K, if the cumulative change orders cause the cumulative project spending to exceed \$250,000, no additional work will be allowed, until the Board authorizes additional funds for the project

~~If the cumulative change orders are anticipated to exceed the amount authorized for construction by 30 percent or \$75,000, whichever is less, there will be no further change orders until the Board authorizes additional funds for the project under the terms of the agreement (subject to change order terms).~~

a.c. The ~~General Manager~~GM is authorized to approve an emergency field change order when failure to authorize the change order will cause Mesa Water to incur significant additional costs or significant delays, even if the change order will exceed the ~~General Manager~~GM's delegated authority. The ~~General Manager~~GM will promptly inform the Board of such action(s) and the Board will review ratification of the ~~General Manager~~GM's decision(s).

3. MAINTENANCE SERVICES

For maintenance services defined as routine, recurring and usual work for the

preservation or protection of District facilities and operations, the following **procedures** will apply:

- a. If the maintenance services are anticipated to cost \$~~15075~~,000 or more per year, the selection of the maintenance service provider will be reviewed by the Board and will be subject to approval by the Board. The Board will authorize a budgeted amount for the specified work. Unless otherwise specified by the Board, the ~~General Manager GM~~ is authorized to approve and execute the agreement between Mesa Water and the approved maintenance service provider.
- b. If the cost of the work is anticipated to exceed the amount authorized by the Board, there will be no further work until the Board authorizes additional funds. The Board will review all requests for additional funds.

4. PROFESSIONAL SERVICES

When professional services are required, the following **procedures** will apply:

- a. Professional service providers are defined as attorneys, engineering consultants, water quality consultants, architects, auditors, actuarial consultants, financial advisors, human resource consultants, information systems/technology consultants, public relations services, management consultants, meeting facilitators and firms hired to perform construction inspection, construction management and/or engineering surveying. If the work of a professional service provider is anticipated to cost \$75,000 or more per year, the selection of the professional service provider will be reviewed by the Board and will be subject to approval by the Board. The Board will authorize a budgeted amount for the specified work. Unless otherwise specified by the Board, the ~~General Manager GM~~ is authorized to approve and execute the agreement between Mesa Water and the approved professional service provider.
- b. If the cost of the work is anticipated to exceed the amount authorized by the Board, there will be no further work until the Board authorizes additional funds. The Board will review all requests for additional funds.

5. SOLE SOURCE AND EXCEPTIONS TO COMPETITIVE SOLICITATION

Any use of the Sole Source or Exceptions to Competitive Solicitation procurement process must be thoroughly documented using the District's designated form which must be approved by the GM prior to entering into a contract.

The Board will be notified, no less than annually, of all contracts entered into under the Sole Source and Exceptions Competitive Solicitation procurement process.

a. Sole Source Procurement

Sole Source Procurement is permitted only when a good or service is available from a single vendor with no reasonable alternatives. This method requires written

justification using the District's designated form demonstrating that no other supplier can meet the specific requirements due to proprietary technology, unique capabilities or exclusive rights.

b. Exceptions to Competitive Solicitation

The justification to support a recommendation for the exception to competitive solicitation of the procurement of goods and services shall meet the following criteria:

- i. Compelling Reason - there is a compelling reason, a preferred brand or material to match existing District equipment or facilitate effective maintenance and support.
- ii. Purchases from Piggyback - Mesa Water may arrange to enter an agreement involving the purchase of goods or services in cooperation/piggyback with another local, county, state, federal or other public entity within the United States.
- iii. Exceptions List - The following purchases of goods and services do not require competitive solicitation:
 - Customer Water Meters
 - Mesa Water Utilities (electricity, water, telephone)
 - Water and water-related costs to the Orange County Water District or the Municipal Water District of Orange County
 - Temporary Labor

6. CREDIT CARDS

Credit cards are to be used when necessary to accomplish small business transactions that require immediate payment, including, but not limited to, business meals, conference/seminar registration, travel costs, District events and emergency supplies. Every department has been assigned a credit card for such purposes.

7. EMERGENCY PURCHASE, REPAIR, AND SERVICES

An emergency is a sudden and unforeseen situation that requires immediate action to protect public health or safety, prevent damage to District property or infrastructure, maintain essential services or avoid significant financial or legal risk. An emergency exists only when the GM determines that unplanned and unexpected repairs or services are essential to the continued operation of District facilities and that using the normal procurement process would create a harmful delay.

In the event of an emergency, the ~~General Manager~~GM has full authority to commit Mesa Water funds in excess of the approved budget limits, or reallocation of funds within those limits, in accordance with, and subject to, the limitations set out in the Delegation of Authority to the General Manager resolution. Resolution No. 1507.

The GM may make immediate purchases of materials and/or services in the event of an emergency, including any purchase required to prevent imminent danger or to prevent or mitigate the loss or impairment of life, health, property or interruption of essential public services. Any emergency expenditure shall be submitted to the Board for review and ratification within 30 days of the end of the emergency.

Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Karyn Igar, P.E., Principal Engineer
DATE: June 24, 2026
SUBJECT: Public Hearing Regarding the 2025 Urban Water Management Plan

RECOMMENDATION

- a. Conduct public hearing;
- b. Review and discuss Resolution Nos. 1615 and 1616;
- c. Adopt Resolution No. 1615 Approving the Adoption of the 2025 Urban Water Management Plan; and
- d. Adopt Resolution No. 1616 Approving the Adoption of the 2025 Water Shortage Contingency Plan.

STRATEGIC PLAN

Goal #1: Provide a safe, abundant, and reliable water supply.
Goal #4: Increase public awareness about Mesa Water.
Goal #6: Provide excellent customer service.
Goal #7: Actively participate in regional and statewide water issues.

PRIOR BOARD ACTION

At its June 9, 2016 meeting, the Board of Directors (Board) held a public hearing for the 2015 Urban Water Management Plan and adopted Resolution No. 1477 Approving the Adoption of the 2015 Urban Water Management Plan.

At its June 10, 2021 meeting, the Board held a public hearing and adopted Resolution No. 1541 Approving the Adoption of the 2020 Urban Water Management Plan; Resolution No. 1542 Approving the Adoption of the 2020 Water Shortage Contingency Plan; and Resolution No. 1543 Approving an Amendment to the 2015 Urban Water Management Plan.

At its June 10, 2026 meeting, the Board received an Information Item regarding the availability of the 2025 Urban Water Management Plan and 2025 Water Shortage Contingency Plan for public review and the notice of a public hearing on June 24, 2026.

BACKGROUND

In 1983, the California Legislature enacted the Urban Water Management Planning (UWMP) Act (Act) (Division 6 Part 2.6 of the Water Code §10610 - 10656). The Act states that every urban water supplier that provides water to 3,000 or more customers, or that provides over 3,000 acre-feet of water annually, should make every effort to ensure the appropriate level of reliability in its water service to meet the needs of its various categories of customers during normal, dry and multiple dry years. Mesa Water District (Mesa Water®) has met the requirements of this legislation since the Act's inception.

An UWMP is a comprehensive document that provides an evaluation of a water supplier's reliability over a long-range planning horizon of 20 to 25 years to meet future demands. Since the adoption of Mesa Water's 2015 UWMP, the Department of Water Resources (DWR) added new requirements to the UWMP reporting process in conformance with state legislation. These changes included the Water Shortage Contingency Plan (WSCP), drought response stages, a drought risk assessment and future annual reporting. This 2025 UWMP contains all elements needed to comply with the new requirements of the Act as amended since 2015. The UWMP and WSCP must be updated at least every five years, adopted by the Board at a noticed public hearing, and submitted to the DWR by July 1 of the years it is due.

Mesa Water must make the draft UWMP and WSCP available for public review; the documents are available on Mesa Water's website and attached herein. Mesa Water must also provide notification of the availability of the UWMP and WSCP for review to the Cities and Counties it supplies ahead of holding a public hearing for adoption of the documents. Staff sent notification letters to the City of Costa Mesa, the City of Newport Beach and the County of Orange on April 23, 2026.

Before the date of the public hearing, Mesa Water is required to place an advertisement once a week for two weeks in a local newspaper announcing the public hearing. Staff placed legal advertisements announcing the June 24, 2026 public hearing in the LA Times Daily Pilot on June 6 and June 13, 2026. The same notice was posted on the District's website and kiosk; and at Costa Mesa City Hall. Once adopted, the UWMP and WSCP must be submitted to DWR by July 1, 2026.

DISCUSSION

The Municipal Water District of Orange County (MWDOC) took the lead preparation of the UWMP and WSCP for the retail agencies in Orange County, as MWDOC did for the 2015 and 2020 UWMPs and 2020 WSCP. As a member agency of MWDOC, many sections of Mesa Water's plan are intended to supplement MWDOC's regional plan. MWDOC's plan provides more detailed information on public awareness, education and water conservation activities that have been implemented and/or which may be implemented on behalf of retail agencies.

MWDOC issued a Request for Proposal (RFP) for a consultant to assist in developing UWMPs and WSCPs for retail agencies in Orange County. The contract was awarded to Carollo Engineers, Inc. (Carollo). Carollo had recently performed a supply and demand assessment for Mesa Water's Master Plan update and the same demand projections were used for the 2025 UWMP.

2025 Urban Water Management Plan - The 2025 UWMP is a comprehensive document that presents an evaluation of Mesa Water's reliability over a long-term horizon. The 2025 UWMP provides an assessment of the present and future water supply sources and demands within Mesa Water's service area and updates various 2020 UWMP items related to: water resource needs, water use efficiency, assessment of water reliability, and strategies to mitigate water shortage conditions. Mesa Water's water supply was assumed to come from locally produced groundwater and reclaimed water from the Green Acres Project (GAP). Table 1 summarizes the project demand and estimated available supply. Mesa Water has the ability to produce more groundwater than is shown in Table 1. The excess capacity over the planning period equates to 101,277 acre-feet and is listed as emergency water supplies.

Table 1. UWMP Project Demand and Supply (Baseline)

	2030	2035	2040	2045	2050	Sum
Projected Water Demands (AF)	15,820	16,777	17,681	17,787	17,767	85,832
Estimated Available Water Supply (AF)	15,820	16,777	17,681	17,787	17,767	85,832
Emergency Water Supplies (AF)	21,602	20,645	19,741	19,635	19,655	101,277
Shortfall	0	0	0	0	0	0

Table 2 summarizes the “worst case” scenario in the UWMP, which is water demand after five consecutive dry years. Even in this scenario, Mesa Water still has adequate supply to meet the demand. As in Table 1, the available supply shown in Table 2 recognizes that Mesa Water would not produce more water than is needed to meet the projected demand. Even in the “worst case” scenario, Mesa Water still has 86,921 acre-feet of emergency water supplies over the planning period.

Table 2. UWMP Projected Demand and Supply after Five Consecutive Dry Years

	2030	2035	2040	2045	2050	Sum
Projected Water Demands (AF)	18,466	19,583	20,638	20,762	20,739	100,188
Estimated Available Water Supply (AF)	18,466	19,583	20,638	20,762	20,739	100,188
Emergency Water Supplies (AF)	18,956	17,839	16,784	16,660	16,683	86,921
Shortfall	0	0	0	0	0	0

2025 Water Shortage Contingency Plan – The 2025 WSCP is a strategic planning document designed to prepare for, and respond to, water shortages. This WSCP complies with California Water Code Section 10632, which requires that every urban water supplier shall prepare and adopt a WSCP as part of its UWMP. The WSCP is a guide that can be used to prevent catastrophic service disruptions through proactive management. The WSCP has prescriptive elements, such as an analysis of water supply reliability; the water shortage response actions for each of the six standard water shortage levels that correspond to water shortage percentages ranging from 10% to greater than 50%; an estimate of the potential to close the supply gap for each measure; protocols and procedures to communicate identified actions for any current or predicted water shortage conditions; procedures for an Annual Assessment; and reevaluation and improvement procedures for evaluating the WSCP.

LEGAL REVIEW

Mesa Water’s Legal Counsel -- Atkinson, Andelson, Loya, Ruud & Romo -- has reviewed the proposed resolutions and recommends Board approval.

FINANCIAL IMPACT

In Fiscal Year 2026, \$49,812 is budgeted for the 2025 Urban Water Management Plan and Water Shortage Contingency Plan; \$49,812 has been spent to date.

RESOLUTION NO. 1615

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS APPROVING THE ADOPTION OF THE 2025 URBAN WATER MANAGEMENT PLAN

WHEREAS, Mesa Water District (Mesa Water) is a county water district organized and operating pursuant to the provisions of the laws of the State of California (State or California); and

WHEREAS, the California Legislature enacted Assembly Bill 797 (California Water Code Section 10610 *et seq.*, known as the Urban Water Management Planning Act, as amended) during the 1983-1984 Regular Session, which mandates that every supplier providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre feet of water annually, prepare an Urban Water Management Plan, the primary objective of which is to ensure the appropriate level of reliability in its water service to meet the needs of its customers during normal, dry and multiple dry years, and to ensure the conservation and efficient use of water; and

WHEREAS, Mesa Water is an urban water supplier providing water to a population over 100,000; and

WHEREAS, Mesa Water's Urban Water Management Plan (UWMP) shall be periodically reviewed at least once every five years and Mesa Water shall make amendments or changes to the UWMP which are indicated by the review; and

WHEREAS, the UWMP must be updated, adopted, and submitted to the California Department of Water Resources by July 1, 2026; and

WHEREAS, the UWMP must be submitted to the California Department of Water Resources, the California State Library, and the cities and county within which Mesa Water provides water supplies, and shall be provided a copy of the UWMP no later than 30 days after adoption thereof; and

WHEREAS, Mesa Water prepared for public review a draft UWMP and held a properly noticed public hearing on June 24, 2026, regarding such UWMP, during which Mesa Water received community input on the UWMP, considered the economic impacts of the UWMP, and adopted a method for determining Mesa Water's urban water use target.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF MESA WATER DISTRICT DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

Section 1. The foregoing recitals are true and correct and are incorporated herein by this reference.

Section 2. The Board of Directors hereby adopts the UWMP, which is incorporated herein by this reference, and will implement the UWMP in accordance with the terms set forth therein.

Section 3. The District Secretary of Mesa Water is hereby directed to submit the UWMP to the California Department of Water Resources, the California State Library, and any city or county within which Mesa Water provides water supplies, no later than 30 days from the date of adoption hereof, in accordance with California Water Code Section 10644(a)(1).

Section 4. The General Manager, District Secretary and other Mesa Water staff are authorized and directed to take all other and further actions necessary or desirable to carry out the directives of this Resolution.

ADOPTED, SIGNED and APPROVED this 24th day of June 2026 by a roll call vote.

AYES: DIRECTORS:
NOES: DIRECTORS:

EXECUTIVE SUMMARY

ES.1 Introduction and UWMP Overview

Mesa Water District (Mesa Water) prepared this 2025 Urban Water Management Plan (UWMP) to submit to the California Department of Water Resources (DWR) to satisfy the UWMP Act of 1983 (UWMP Act or Act) and subsequent California Water Code (Water Code) requirements. UWMPs are comprehensive documents that present an evaluation of a water supplier's reliability over a long-term (20-25 year) horizon. This 2025 UWMP provides an assessment of the present and future water supply sources and demands within Mesa Water's service area. It presents an update to the 2020 UWMP on Mesa Water's water resource needs, water use efficiency programs, water reliability assessment, and strategies to mitigate water shortage conditions. It also presents Mesa Water's updated 2025 Water Shortage Contingency Plan (WSCP), designed to prepare for and respond to water shortages. This 2025 UWMP contains all elements required by the UWMP Act.

ES.2 UWMP Preparation

Mesa Water coordinated the preparation of this 2025 UWMP with other key entities, the Municipal Water District of Orange County (MWDOC), the regional wholesaler of imported water for Orange County, and the Orange County Water District (OCWD), Orange County Groundwater Basin (OC Basin) manager and provider of recycled water in north Orange County. Mesa Water also coordinated with other entities that provided valuable, regionally consistent data for the analyses prepared in this UWMP, including population projections from the Center for Demographic Research (CDR) at California State University, Fullerton, and the Orange County Water Demand Projection Model Technical Memorandum (TM).

ES.3 System Description

Mesa Water is governed by a five-member Board of Directors and is located in a community that originated in about 1906. After the Costa Mesa District Merger Law was signed on June 30, 1959, Mesa Water (formerly known as the Costa Mesa County Water District) commenced operations on January 1, 1960, by acquiring the assets and obligations and assumed the responsibility of consolidating the City of Costa Mesa's Water Department, Fairview County Water District, Newport Mesa Irrigation District, and Newport Mesa County Water District.

Mesa Water's water service area covers approximately 18 square miles, along the coast of Southern California within the County of Orange and includes most of the City of Costa Mesa, portions of the City of Newport Beach and a small portion of unincorporated Orange County. Mesa Water operates nine wells, including seven clear water wells and two amber wells, two reservoirs with a total storage of 29 million gallons (MG), four metered imported water connections, and 15 emergency interconnections. Mesa Water's potable water distribution system consists of one pressure zone with approximately 317-miles of water mains system with approximately 24,425 service connections.

ES.4 Water Use Characterization

ES.4.1 Water Use in the Last Five Years

Total water use within Mesa Water’s service area has fluctuated over the past five years (fiscal year [FY] 2021-25), with an annual average of approximately 16,557 AF. FY 2020-21 through FY 2021-22 saw the highest water use over the last five years due to region-wide drought conditions. FY 2022-23 proved to be one of the wettest years on record in the State and Mesa Water saw a general decrease in water demand following this wet year, as precipitation offsets landscape irrigation demands. These year-to-year fluctuations in precipitation will continue to influence Mesa Water’s annual demands. In general, Mesa Water saw a decrease in demand of 6.7 percent over the 5-year reporting period.

ES.4.2 Projected Water Use

Mesa Water recently completed its 10-year water capital improvement plan, which included water use projections through 2035. Water use projections from 2035 through 2050 are based on the 2025 Orange County Water Demand Projection Model Technical Memorandum (TM).

Over the next 25 years, Mesa Water’s total water demands are projected to increase by 7.6 percent from 16,515 acre-feet (AF) in 2025 to approximately 17,767 AF by 2050. The Orange County Groundwater Basin is expected to continue meeting a notable share of total water demand between 2025 and 2050.

ES.5 Conservation Target Compliance

Mesa Water participated in the Orange County 20x2020 Regional Alliance along with all other Orange County water agencies. The alliance was created by MWDOC in collaboration with all its retail member agencies as well as the Cities of Anaheim, Fullerton, and Santa Ana, to assist Orange County retail agencies in complying with the requirements of the Water Conservation Act of 2009, also known as SBx7-7 (Senate Bill 7 as part of the Seventh Extraordinary Session). Signed into law on February 3, 2010, it required the State of California to reduce urban water use by 20 percent by 2020.

Retail water suppliers are required to comply with SBx7-7 individually or as a region in collaboration with other retail water suppliers, to be eligible for water-related state grants and loans. Orange County, as a region, achieved its 2020 target water use of 159 gallons per capita per day (GPCD) prior to 2020, indicative of the collective efforts in reducing water use in the region. All Orange County water retailers, achieved individual compliance prior to 2020. By 2020, Mesa Water achieved a per capita per day water use of 85 GPCD (compared to its 143 GPCD target) and continues to implement water use efficiency measures.

ES.6 Water Supply Characterization

Mesa Water’s main source of water supply is groundwater from the OC Basin. Recycled water makes up the rest of Mesa Water’s water supply portfolio. In FY 2024-25, Mesa Water used 100 percent local water supplies, relying on 94 percent groundwater and 6 percent recycled water. Imported water is available as an emergency backup or supplemental supply, but Mesa Water has met all potable water demands with local groundwater in recent years. Imported water supply has not been a significant supply source for

Mesa Water since 2013. This supply portfolio is projected to remain stable for the next 25 years through 2050.

ES.7 Water Service Reliability and Drought Risk Assessment

Every urban water supplier is required to assess the reliability of their water service to its customers under a normal year, a single dry year, and multiple dry years. The water service reliability assessment compares projected supply to projected demand for three long-term hydrological conditions. Mesa Water's water sources are local groundwater from the OC Basin and imported water purchased from MWDOC/MET.

The OC Basin manager, OCWD, has developed programs and projects to improve groundwater recharge and augment groundwater through recycled water, conjunctive use, and water transfers. OCWD assesses groundwater conditions and sets its BPP, which determines how much water will be pumped from the basin year, and the Basin Equity Assessment (BEA), which is a surcharge for exceeding the BPP. The BPP is set at 85 percent and is forecasted to remain so through 2050. Mesa Water also has two wells that pump amber-colored groundwater from a deeper aquifer and are treated at the Mesa Water Reliability Facility.

MET, the Southern California regional wholesaler of imported water, has also invested in numerous programs and projects to augment its direct deliveries of imported water, such as water transfers, groundwater banking, and use of its reservoir storage. MET's 2025 UWMP demonstrates that MET will be able to meet its projected water demands for its entire service area for the next 25 years under normal, dry, and five consecutive dry year conditions.

Overall, Mesa Water's service area is projected to meet full-service demands from 2026 through 2050 under normal years, single dry year, and five consecutive dry year conditions.

ES.8 Water Shortage Contingency Planning

The Water Shortage Contingency Plan (WSCP) is a standalone document adopted by Mesa Water serving as the guidance document used to prepare for and respond to water shortages and service disruptions of Mesa Water's water supplies through proactive mitigation measures. A water shortage, when water supply available is insufficient to meet the normally expected customer water use at a given point in time, may occur due to a number of reasons, such as water supply quality changes, climate change, drought, and catastrophic events (e.g., earthquake). Mesa Water's WSCP provides a water supply availability assessment and structured steps designed to respond to actual conditions. This level of detailed planning and preparation will help maintain reliable supplies and reduce the impacts of supply interruptions.

The WSCP contains the processes and procedures that will be deployed when shortage conditions arise so that Mesa Water's governing body and its staff can easily identify and efficiently implement pre-determined steps to mitigate a water shortage to the level appropriate to the degree of water shortfall anticipated.

ES.9 Demand Management Measures

Mesa Water has demonstrated its commitment to water use efficiency through multi-faceted and holistic water use efficiency programs. Mesa Water's water use efficiency implementation can be described broadly under five categories: *Operations Practices* (e.g., conservation pricing, water waste prevention, water loss control, and metering with commodity rates), *Education and Outreach* (e.g., public outreach

programs, K-12 school programs, Water Awareness Poster Contest, Qualified Water Efficiency Landscaper Training Program), *Residential Indoor Program* (e.g. various rebates), *Commercial, Industrial, and Institutional Program* (e.g., rebates, Water Savings Incentive Program, On-site Retrofit Program), and Landscape Programs (e.g., turf replacement, spray-to-drip irrigation rebate, residential landscape design assistance).

ES.10 Plan Adoption, Submittal, and Implementation

The Water Code requires both the UWMP and the WSCP to be adopted by the Supplier's governing body. Before the adoption of the UWMP, Mesa Water notified the public and the cities and counties within its service area that MWDOC was in the process of preparing an UWMP and WSCP per the Water Code. Mesa Water circulated the final draft of the UWMP and WSCP to facilitate public review and held a public hearing to receive input from the public on the UWMP and WSCP. Upon completion of the public hearing, Mesa Water moved to adopt both the UWMP and WSCP. Post adoption, Mesa Water submitted the UWMP to DWR and other key agencies and made the document available for public review within 30 days after filing with DWR.

The UWMP serves as a legal and technical water management foundation for Mesa Water and can be referenced as needed, until its next required update cycle in 2030. With approval from DWR, Mesa Water shall implement this plan into its public resources, providing Mesa Water staff, the public, and elected officials with an understanding of past, current, and future water conditions and management. Furthermore, the WSCP serves as a strategic planning document designed to prepare for and respond to water shortages and service disruptions of Mesa Water's water supplies.

CHAPTER 1 INTRODUCTION AND UWMP OVERVIEW

Mesa Water District (Mesa Water) prepared this 2025 Urban Water Management Plan (UWMP) to submit to the California Department of Water Resources (DWR) to satisfy the UWMP Act of 1983 (UWMP Act or Act) and subsequent California Water Code (Water Code) requirements.

Mesa Water is a retail water supplier that provides water to its residents and other customers sourced from the Orange County Groundwater Basin (OC Basin), which is managed by the Orange County Water District (OCWD), and recycled wastewater from OCWD's Green Acres Project (GAP). Mesa Water, as one of MWDOC's 27 member agencies, prepared this 2025 UWMP in collaboration with MWDOC, Metropolitan Water District of Southern California (MET), OCWD, and other key agencies.

UWMPs are comprehensive documents that present an evaluation of a water supplier's reliability over a long-term (20-25 year) horizon. In response to the changing climatic conditions since the 2020 UWMP, MWDOC has been assisting its member agencies and surrounding communities to manage both their water supplies and demands. The water loss audit program, water conservation measures, public outreach and education on conservation and efforts for increased self-reliance to reduce dependency on imported water from the Sacramento-San Joaquin Delta (the "Delta") are some of the water management actions that Mesa Water has taken to maintain the reliability of water supply for its service area. In addition, Mesa Water has been proactive in managing local water supplies through the addition of two new water supply wells. Lastly, Mesa Water has worked towards increasing supply resilience through the evaluation of a brackish groundwater desalination project with neighboring agencies.

This UWMP provides an assessment of the present and future water supply sources and demands within Mesa Water's service area. It presents an update to the 2020 UWMP on Mesa Water's water resource needs, water use efficiency programs, water reliability assessment and strategies to mitigate water shortage conditions. It also includes Mesa Water's updated 2025 Water Shortage Contingency Plan (WSCP) designed to prepare for and respond to water shortages. This 2025 UWMP contains all elements required by the Act.

1.1 Overview of Urban Water Management Plan Requirements

The UWMP Act enacted by California legislature requires every urban water supplier (Supplier) providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre-feet (AF) of water annually to prepare, adopt, and file an UWMP with the DWR every five years in the years ending in six and one.

For this 2025 UWMP cycle, DWR continues to place emphasis on achieving improvements for long term reliability and resilience to drought and climate change in California. Despite there being no new statutory requirements, Suppliers must now report progress on meeting their 2028 Water Loss Standards and continue to state their compliance with Senate Bill (SB) X7-7 2020 Targets. Additional guidance on stored water accounting and recommendations on identifying the need for future or proposed water supply projects are provided by DWR as well.

1.2 UWMP Organization

This UWMP is organized into 10 chapters aligned with the DWR Guidebook recommendations. The sections within each chapter are customized to include Mesa Water's water supply reliability and future projections as well as plans to overcome any water shortages over a planning horizon of the next 25 years. The Chapters for this UWMP are listed below:

Chapter 1 Introduction and UWMP Overview gives an overview of the UWMP fundamentals and requirements for the 2025 UWMP.

Chapter 2 UWMP Preparation identifies this UWMP as an individual planning effort of Mesa Water, lists the type of year and units of measure used and introduces the coordination and outreach activities conducted by Mesa Water to develop this UWMP.

Chapter 3 System Description gives a background on Mesa Water's water system and its climate characteristics, population projections, demographics, socioeconomics, and predominant current and projected land uses of its service area.

Chapter 4 Water Use Characterization provides historical, current, and projected water use by customer category for the next 25 years for Mesa Water and the projection methodology used by Mesa Water to develop the 25-year projections.

Chapter 5 Conservation Target Compliance restates that Mesa Water's 2020 per capita water use in gallons per capita per day (gpcd) met the compliance target defined by SB X7-7.

Chapter 6 Water Supply Characterization describes the current water supply portfolio of Mesa Water as well as the planned and potential water supply projects and water exchange and transfer opportunities.

Chapter 7 Water Service Reliability and Drought Risk Assessment describes the assessment of the reliability of Mesa Water's water supply service to its customers for a normal year, single dry year and five consecutive dry years scenarios. This section also includes a Drought Risk Assessment (DRA) of all the supply sources for a consecutive five-year drought period beginning 2026.

Chapter 8 Water Shortage Contingency Planning is a brief summary of the standalone WSCP document which provides a structured guide for Mesa Water to deal with water shortages, incorporating prescriptive information and standardized action levels, lists the appropriate actions and water use efficiency measures to be taken to ensure water supply reliability in times of water shortage conditions, along with implementation actions in the event of a catastrophic supply interruption.

Chapter 9 Demand Management Measures provides a description of Mesa Water's current and planned measures and programs to help the retail customers in its service area be water efficient and comply with its urban water use reduction targets.

Chapter 10 Plan Adoption, Submittal, and Implementation provides a record of the process Mesa Water followed to adopt and implement its UWMP.

CHAPTER 2 UWMP PREPARATION

Mesa Water District's (Mesa Water) 2025 Urban Water Management Plan (UWMP) is prepared to meet the California Water Code (Water Code) compliance as a retail water supplier to its customers. The development of this UWMP involved close coordination with its wholesale supplier, the Municipal Water District of Orange County (MWDOC), along with other key entities within the region.

2.1 Individual Planning and Compliance

As described in Chapter 1, every urban water supplier providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre-feet (AF) of water annually must prepare, adopt, and file an UWMP with the California Department of Water Resources (DWR) every five years to meet the compliance requirements of the UWMP Act. As shown in Table 2.1, Mesa Water meets this requirement as it has 24,425 municipal connections and supplied 16,375 AF in Fiscal Year 2025.

Table 2.1 Submittal Table 2-1 Retail: Public Water Systems

Submittal Table 2-1 Retail: Public Water Systems			
Public Water System Number	Public Water System Name	Number of Municipal Connections 2025	Volume of Water Supplied 2025 (AF)
CA3010004	Mesa Water District	24,425	16,515
Total		24,425	16,515
DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3. This table identifies the unit of measure selected in Table 2-3.			
NOTES:			

Mesa Water opted to prepare its own UWMP (Table 2.2) and comply with the Water Code individually, while closely coordinating with MWDOC and various key entities as discussed in Chapter 2.2 to streamline regional integration. The UWMP Checklist was completed to confirm the compliance of this UWMP with the Water Code (Appendix A). All DWR standardized tables are provided in Appendix B. Mesa Water has selected to report demands and supplies using fiscal year as the basis (Table 2.3).

2.2 Coordination and Outreach

2.2.1 Integration with Other Planning Efforts

Mesa Water, as the retail supplier to its customers, coordinated the preparation of this UWMP with its water supplier wholesaler MWDOC, the Orange County Water District (OCWD) as the manager of the Orange County Groundwater Basin, its regional wastewater management agency, Orange County Sanitation District (OCSd). Mesa Water has also developed this Plan in conjunction with other regionally consistent efforts such as population projections from the Center for Demographic Research at California State University, Fullerton (CDR) and the Orange County Water Demand Projection Model Technical Memorandum.

Key planning and reporting documents that were used to develop this UWMP are:

- **Metropolitan Water District of Southern California's (MET) 2025 UWMP** uses assumptions that fall within the plausible futures contemplated in MET's Integrated Water Resources Plan to evaluate MET's future imported water supply reliability.
- **MET's 2020 Integrated Water Resources Plan (IRP) Regional Needs Assessment** is a long-term, scenario-based planning document that guides Metropolitan's programs and investments to ensure reliable water supplies in Southern California and provides a basis for water supply reliability in Orange County.
- **MET's Climate Adaptation Master Plan for Water (CAMP4W)** is an ongoing planning and decision-making tool that accounts for the complexities and uncertainties of climate change. Part of the second phase of MET's long-term IRP planning process, CAMP4W incorporates the results and findings of MET's 2020 IRP Regional Needs Assessment into a collaborative process to identify and evaluate integrated regional solutions.

- **MET's 2025 Water Shortage Contingency Plan (WSCP)** provides a water supply availability assessment and guide for MET's intended actions during water shortage conditions.
- **MWDOC's 2025 WSCP** provides a water supply availability assessment and structured steps designed to respond to actual conditions that will help maintain reliable supplies and reduce the impacts of supply interruptions.
- **MWDOC's 2023 Orange County Water Reliability Study** is a planning document to help guide planning for future water supply reliability for water providers in Orange County and provide input on regional water supply issues for MET.
- **2025 Orange County Water Demand Projection Model Technical Memorandum** is a collaborative effort amongst MWDOC, OCWD, and all retail water suppliers in Orange County that developed water demand projections to produce regionally consistent forecasts across all Orange County water agencies.
- **OCWD's 2025 Groundwater Resilience Plan (GRP)** was completed in February 2025. The GRP is an adaptive strategies management plan outlining strategic projects to secure reliable future water supplies in the Orange County Groundwater Basin (OC Basin).
- **OCWD's 2023-24 Engineer's Report** provides information on the groundwater conditions, water supply and basin utilization of the OC Basin.
- **2022 Basin 8-1 Alternative** is an alternative to the Groundwater Sustainability Plan (GSP) for the OC Basin, provides significant information related to sustainable management of the basin in the past and hydrogeology of the basin, including groundwater quality and basin characteristics, and addresses DWR's recommendations to ensure long-term basin sustainability.
- **Orange County Water & Wastewater Multi-Jurisdictional Hazard Mitigation Plan (2024)** provides the basis for the seismic and other natural and natural disaster risk analysis of the water system facilities.
- **Mesa Water District Capital Improvement Plan** of Mesa Water's service area provides information on water infrastructure planning projects and plans to address any required water system improvements.

2.2.1.1 Statewide Water Planning

In addition to regional coordination with the various agencies described above, Mesa Water as a MWDOC member agency, is currently a part of MET's statewide planning effort to reduce reliance on the water imported from the Sacramento-San Joaquin Delta (Delta).

It is the policy of the State of California to reduce reliance on the Delta in meeting California's future water supply needs through a statewide strategy of investing in improved regional supplies, conservation, technology innovation, partner collaborations and water use efficiency measures. This policy is codified through the Delta Stewardship Council's Delta Plan Policy WR P1 (Cal. Code Regs., tit. 23, § 5003) requires state and local water suppliers to reduce reliance on the Delta by improving regional water self-reliance. It mandates that water exported from, transferred through, or used in the Delta must demonstrate efforts in water conservation, recycling, and supply diversification.

Progress towards achieving the goal of WR P1 is measured through Supplier reporting in each Urban Water Management Planning cycle. WR P1 is relevant to water suppliers that plan to participate in

multi-year water transfers, conveyance facilities, or new diversions in the Delta. Additionally, with the recent amendments to the Bay Delta Plan, tributary flow objectives to the Delta are being updated to account for quality and habitat improvements for local environmental resources. This results in reduced reliance on Delta water supplies. Since 2022, the Bay-Delta Plan Amendment update has been in development. This effort considers additional tributaries from the southern San Joaquin Valley, triggering a re-evaluation of Delta flow requirements and conservation objectives, which ultimately may impact available supply to the State Water Project (SWP).

Through significant local investment, collaboration at both a local and regional scale and integration with MWDOC’s water use efficiency strategies and conservation programs, Mesa Water has demonstrated a reduction in Delta reliance. For member agencies of MWDOC that receive imported water from MET, or in Mesa Water’s case, have the ability to receive imported water from MET, these agencies have passively demonstrated a reduction in Delta reliance and a subsequent improvement in regional self-reliance by participating in MWDOC led regional strategies. A detailed description and documentation of Mesa Water’s consistency with Delta Plan Policy WR P1 is included in Chapter 7.4 and Appendix C.

2.2.2 Wholesale and Retail Coordination

Mesa Water developed its UWMP in conjunction with MWDOC’s 2025 UWMP. As a retail water supplier, Mesa Water provided its historical water use and water use projections data to MWDOC (Table 2.4).

Table 2.4 Submittal Table 2-4 Retail: Water Supplier Information Exchange

NOTES:

2.2.3 Public Participation

For further coordination with other key agencies, and to encourage public participation in the review and update of this Plan, Mesa Water held a public hearing on June 24, 2026, and notified key entities and the public per the Water Code requirements.

CHAPTER 3 SYSTEM DESCRIPTION

Mesa Water District (Mesa Water) is governed by a five-member Board of Directors and is located in a community that originated in about 1906. After the Costa Mesa District Merger Law was signed on June 30, 1959, Mesa Water (formerly known as the Costa Mesa County Water District) commenced operations on January 1, 1960, by acquiring the assets and obligations and assumed the responsibility of consolidating the City of Costa Mesa's Water Department, Fairview County Water District, Newport Mesa Irrigation District, and Newport Mesa County Water District.

Mesa Water's water service area covers approximately 18 square miles, along the coast of Southern California within the County of Orange and includes most of the City of Costa Mesa, portions of the City of Newport Beach and a small portion of unincorporated Orange County. Mesa Water operates nine wells, including seven clear water wells and two amber wells, two reservoirs with a total storage of 29 million gallons (MG), four metered imported water connections, and 15 emergency interconnections. Mesa Water's potable water distribution system consists of one pressure zone with approximately 317-miles of water mains system with approximately 24,425 service connections.

Mesa Water's climate is characterized by southern California's "Mediterranean" climate with mild winters, warm summers and moderate rainfall. In terms of land use, Mesa Water is almost built out with predominantly single and multi-family residential units. The City of Costa Mesa has some medium and high-density ongoing development projects. Most recently planned project is the One Metro West Project which will bring several 100's of high-density housing units. The current population (2025) of 110,432 is projected to increase by 9.5 percent over the next 25 years to 120,958. This equates to an annual growth rate of 0.38 percent.

3.1 Agency Overview

This section provides information on the formation and history of Mesa Water, its organizational structure, roles, and relationship to the Municipal Water District of Orange County (MWDOC).

3.1.1 Formation and Purpose

Mesa Water is located in a community that originated in about 1906. The La Habra Valley Land and Water Company, which drilled the first well in 1910, developed the first water system in the area. In 1913, the Fairview Farms Mutual Water Company constructed a system for agricultural purposes, and in 1918, the Newport Heights Irrigation District was formed to serve domestic and irrigation water. These two agencies acquired the facilities of the La Habra Water Company. With continued growth in the early 1900's the Newport Mesa Irrigation District and Santa Ana Heights Mutual Water Company were created. Fairview Farms Mutual Water Company later became the Fairview County Water District; Newport Mesa Irrigation District became the Newport Mesa County Water District. In 1953, the City of Costa Mesa became an incorporated city and in 1955 created a municipal water system to serve the areas beyond the four existing Mesa Water boundaries. On June 30, 1959, the Governor of the State of California signed Senate Bill 1375 (Costa Mesa District Merger Law), as introduced by Senator Murdy. The general provisions of this law called for the consolidation of four predecessor agencies: the Newport Heights Irrigation District, the

Fairview County Water District, the Newport Mesa County Water District, and the City of Costa Mesa Water Department.

On January 1, 1960, Mesa Water, formerly called the Costa Mesa County Water District, commenced operations pursuant to Sections 33200 et. seq. of the California Water Code (Water Code). The Santa Ana Heights Water Company was originally involved in merger discussions but withdrew before consolidation. Mesa Water set a precedent with this merger because it was the first water agency in California to consolidate two or more water agencies and assume both their assets and debt obligations.

Mesa Water represents a specific geographic area, is not subject to the State's Public Utility Commission, and is not part of any city or the government of the County of Orange. Mesa Water has maintained strong and cooperative relationships with cities and related public agencies that border or interact with it.

3.1.2 Board of Directors

A five-member Board of Directors governs Mesa Water, whose service area is divided into five geographic divisions of approximately equal population. One individual from each division is elected by the voting public to serve alternating four-year terms on the Board.

Mesa Water Board of Directors is responsible for establishing policies. The Board elects one of its members to serve as President and another to serve as First Vice President. The Board appoints a General Manager who serves at the discretion of the Board, as does (R Water Secretary, and Treasurer/Auditor. The General Manager is responsible for the administration of policies and the day-to-day operations.

The current members of the Board of Directors include:

- Marice H. DePasquale – President (Division 3).
- Shawn Dewane – Vice President (Division 5).
- Jim Atkinson – Director (Division 4).
- Fred R. Bockmiller, Jr., P.E. – Director (Division 1).
- James R. Fisler – Director (Division 2).

3.1.3 Relationship to MWDOC

Mesa Water is one of MWDOC's 27 member agencies with the ability to purchase imported water from MWDOC, Orange County's wholesale water supplier and a member agency of Metropolitan Water District of Southern California (MET), however Mesa Water relies on its local groundwater supply to provide water to its customers. Mesa Water's location within MWDOC's service area is shown on Figure 3.1.

Figure 3.1 Regional Location of Mesa Water District and Other MWD OC Member Agencies

3.2 Water Service Area and Facilities

3.2.1 Water Service Area

Mesa Water's water service area is located along the coast of Southern California within the County of Orange. Mesa Water is between one-eighth of a mile to almost six miles inland of the Pacific Ocean. It is also approximately 37 miles southeast of Los Angeles, 88 miles north of San Diego and 475 miles south of San Francisco. The service area is approximately 18 square mile that includes most of the City of Costa Mesa, portions of the City of Newport Beach and a small portion of unincorporated Orange County. Mesa Water shares borders with the County of Orange, the Cities of Huntington Beach, Fountain Valley, Irvine, Santa Ana, and Newport Beach.

Mesa Water is located within the County of Orange, which has one of the most robust economies in California. Mesa Water's service area includes notable landmarks and major regional facilities such as the John Wayne Orange County Airport, State of California's Fairview Development Center, Segerstrom Center for the Arts, Orange County Fairgrounds, Orange Coast College, and South Coast Plaza shopping complex.

Unlike most typical coastal areas, elevation ranges from 30 to 110 feet above sea level near the ocean mesa and declines in elevation inland from the mesa. Mesa Water's geographic location places it over a portion of the Orange County Basin, a large underground aquifer that lies beneath the northern service area, and much of the rest of northern Orange County. Orange County Water District (OCWD) has managed the groundwater basin since 1933. A map of Mesa Water's water service area is shown as Figure 3.2.

Figure 3.2 Mesa Water District Water Service Area

3.2.2 Water Facilities

Mesa Water typically supplies 100 percent of its water demands from groundwater. Mesa Water can use imported water as an emergency backup supply and serves recycled water from the Green Acres Project (GAP). Mesa Water operates seven wells that pump clear groundwater from the main production aquifer of the Orange County Basin, as well as two wells that pump amber-tinted water located below the main production aquifer. The amber-tinted water wells are treated at the Mesa Water Reliability Facility (MWRF), an advanced membrane treatment plant, before being pumped into the distribution system. Mesa Water has approximately 328 miles of water mains and two reservoirs with pump stations for operational and emergency storage. The reservoirs have a total storage of 29.45 MG. Mesa Water has four metered imported water connections. Additionally, Mesa Water has four emergency interconnections with the City of Santa Ana, and emergency interconnections with the City of Newport Beach, and five emergency interconnections with Irvine Ranch Water District (IRWD).

3.3 Climate

Mesa Water's service area is located within the South Coast Air Basin (SCAB) that encompasses all of Orange County, and the urban areas of Los Angeles, San Bernardino, and Riverside counties. The climate in the SCAB area is characterized by southern California's "Mediterranean" climate: a semi-arid environment with mild winters, warm summers, and moderate rainfall.

Local rainfall has limited impacts on reducing water demand in Mesa Water, except for the case of landscape irrigation demand. For example, in August 2023, Orange County as a region experienced the lowest seasonal water demand due to significant summer precipitation events from Tropical Storm Hilary. The increase in precipitation allowed landscape irrigation systems to be turned off, however other municipal and industrial uses (e.g., consumption, processing, and washing remained the same).

Water that infiltrates into the soil may enter groundwater supplies depending on the local geography. However, due to the large extent of impervious cover in Southern California, rainfall runoff quickly flows to a system of concrete storm drains and channels that lead directly to the ocean. OCWD has successfully captured stormwater along the Santa Ana River and in recharge basins for years and used it as an additional source of supply for groundwater recharge. Based on the 2022 Basin 8-1 Alternative Plan Update, OCWD captured an average annual stormwater volume of approximately 54,000 acre-feet (AF) over the period of five years, from Water Year 2016-17 to 2020-21.

MET's water supplies come from the State Water Project (SWP) and the Colorado River Aqueduct (CRA) are influenced by climate conditions in northern California and the Colorado River Basin, respectively. Both regions have variable hydrologic conditions that can significantly affect MET's supplies from year to year. This past decade has seen dramatic swings in annual precipitation, especially in the form of snowpack, which directly affect SWP supply allocations. Similarly, the Colorado River Basin also experienced year-to-year swings in hydrology, and due to the prolonged drought conditions since 2000, storage within the Colorado River system has declined to less than half of its reservoir capacity and has been fluctuating at that level (MET, 2025).

3.4 Population, Demographics, and Socioeconomics

3.4.1 Service Area Population

Mesa Water serves a 2025 population of 110,432 according to Mesa Water’s Capital Improvement Program. The Center for Demographic Research at California State University, Fullerton (CDR) provided more long-term population projections. Overall, the population is projected to increase 9.5 percent by 2050. Table 3.1 shows the population projections in five-year increments out to the year 2050 within Mesa Water’s service area.

Table 3.1 Submittal 3-1 Retail: Population - Current and Projected

Submittal Table 3-1 Retail: Population - Current and Projected Water Code Section 10631(a)						
Population Served	2025	2030	2035	2040	2045	2050(opt)
	110,432	114,184	119,811	120,548	122,460	120,958

Notes:

Source (up to 2035): Transportation Analysis Zone level data provided by Southern California Association of Governments as used in 2024 Connect SoCal.

Source (from 2040 onwards): Center for Demographic Research at California State University, Fullerton, 2025.

3.4.2 Demographics and Socioeconomics

As shown below in Table 3.2, the total number of dwelling units in Mesa Water service area is expected to increase by 28.4 percent in the next 25 years from 42,899 in 2025 to 55,078 in 2050.

Table 3.2 Mesa Water District Service Area Dwelling Units by Type

Dwelling Units	2025	2030	2035	2040	2045	2050
Single Family	15,981	17,073	17,125	17,171	17,211	17,470
All Other ⁽¹⁾	26,918	30,091	33,423	35,688	37,423	37,608
Total	42,899	47,164	50,548	52,859	54,634	55,078

Notes:

Source: Center for Demographic Research at California State University, Fullerton, 2025.

(1) Includes duplex, triplex, apartment, condo, townhouse, mobile home, etc. Yachts, houseboats, recreational vehicles, vans, etc. are included if is primary place of residence. Does not include group quartered units, cars, railroad box cars, etc.

In addition to the types and proportions of dwelling units, various socio-economic factors such as age distribution, education levels, general health status, income and poverty levels affect Mesa Water’s water management and planning. Based on the United States Census Bureau’s [2023 American Community Survey](#), the City of Costa Mesa, which covers majority of Mesa Water service area, has about 12 percent of population of 65 years and over, 67 percent between the ages of 18 and 64 years, and 21 percent under the age of 18 years. Of Mesa Water’s population over 25 years of age, 89.5 percent is at minimum a high school graduate, with 48.4 percent of this age group having at least a bachelor’s degree.

3.4.3 Demographic Projection Methodology

CDR is a collaborative research center established in 1996 to provide accurate and timely demographic data on population, housing, and employment in Orange County. CDR serves as Orange County’s

authoritative source for demographic information. Mesa Water obtains its service area population and dwelling unit data from MWDOC via CDR.

MWDOC contracts with CDR to update the 2010 population estimates through the current year and to provide an annual estimate of population served by each of its retail water suppliers within its service area. CDR uses geographic information system (GIS) mapping and data from the 2000, 2010, and 2020 United States Decennial Censuses, State Department of Finance (DOF) population estimates, and the CDR annual population estimates and Housing Inventory System (HIS). These annual estimates incorporate annual revisions to the DOF annual population estimates, often for every year back to the most recent Decennial Census. As a result, all previous estimates are set aside and replaced with the most current set of annual estimates. Annexations and boundary changes for water suppliers are incorporated into these annual estimates.

Demographic projections used for this UWMP reflect the most recently available set of projections developed by CDR based on its 2022 Orange County Projections. Demographic projections for Orange County are updated every 4 years, with the next set of projections expected in the late fall of 2026. The 2022 Orange County Projections accounted for Draft RHNA rezone sites with jurisdictions including the number of dwelling units that are most likely to occur/get built by the end of 2050 under assumptions and trends existing at the time of the forecasting effort, including a parcel-level inventory of additional housing capacity from sites that were to be rezoned to accommodate the 6th RHNA cycle. In the summer of 2025, projections by water supplier for population and dwelling units by type were estimated using the 2022 Orange County Projections dataset. Growth for each of the five-year increments was allocated using GIS and a review of the traffic analysis zones (TAZ) data with a 2023 aerial photo. The growth was added to the 2025 estimates for each respective water supplier.

3.5 Land Uses

3.5.1 Current Land Uses

Mesa Water's service area can best be described as a predominantly residential community located along the coast in central Orange County, close to scenic beaches and natural preserves. The influx of tourists during the summer months creates higher demands within Mesa Water's service area, especially at the beach facilities, hotels and restaurants:

Based on the zoning designation collected and aggregated by Southern California Association of Government (SCAG) around 2018, the current land use within Mesa Water's service area can be categorized as follows:

- Single family residential: 1.8 percent.
- Multi-family residential: 40.4 percent.
- Commercial: 13.2 percent.
- Industrial: 10.3 percent.
- Institutional/Governmental: – 19.5 percent.

- Agriculture: 1.0 percent.
- Open space and parks: 12.0 percent.
- Other: 1.8 percent (e.g., Undevelopable or Protected Land, Water, and Vacant).

3.5.2 Projected Land Uses

Mesa Water’s service area is close to being built out, except for limited infill development of vacant legal parcels in the existing residential neighborhoods and commercial areas. Some increase in water demands is also anticipated for redevelopment of existing, underutilized lands with increased densities. A few pending developments are listed in Table 3.3 that will change water demands in the future.

Table 3.3 Mesa Water District Major Planned Developments

Project Address	Project Description	Information
2501 Harbor Boulevard	Fairview Development Center	Minimum of 2,300 dwelling units and potentially 4,000 dwelling units with 35,000 square feet (sf) of commercial
2301 S. Shelley Circle	Southern Region Emergency Operations Center (SREOC)	The proposed project includes (2) two buildings: A +/-34,000 gross sf Main Office Building containing the Emergency Operation Center (EOC) and a +/- 20,000 gross sf warehouse building. In addition to the buildings, a 120-foot-tall communication tower, helipad, guard shack, trash enclosures, diesel generators, water storage tank (24-hour capacity), and a sanitary sewer tank (24-hour capacity) are part of the project scope.
1683 Sunflower	One Metro West	15 acres, Mixed-Us, Multi-Family Residential (957 dwelling units via Bldgs. A, B and C) and 6,000 sf retail. 1.5 acres open space.
3150 Bear Street	140-Unit Residential Single Family Homes	
W. 17th Street and Pomona Avenue	425 apartment complex and 46 multi-family residences	

It should be noted that the 2025 Orange County Water Demand Projection Model discussed in Chapter 4 was based on CDR’s 20202 Orange County projections. The developments listed above may have been added or modified since. As a result, the future demands associated with these developments may increase Mesa Water’s water demand beyond what is presented in this Urban Water Management Plan (UWMP).

In addition to the above developments, new developments may potentially also include accessory dwelling units (ADU) beyond 2025, which are separate small dwellings embedded within residential properties. There has been an increase in the construction of ADUs in California in response to the rise in interest in providing affordable housing supply.

The following requirements and changes in laws will impact Mesa Water's future land use moving forward:

- **Regional Housing Needs Assessment (RHNA)** - State law requires jurisdictions to provide their share of the RHNA allocation. SCAG determines the housing growth needs by income for local jurisdictions through RHNA. The cities lying in the service area of Mesa Water will continue planning for their RHNA allocation requirements as outlined in their respective General Plan Housing Elements.
- **Accessory Dwelling Units (ADUs)** – ADUs are separate small dwellings embedded within residential properties. There has been an increase in the construction of ADUs in California in response to the rise in interest to provide affordable housing supply. Since 2020, several landmark laws were passed by State Legislature, updating ADU law to simplify the construction, rental, and sale of ADUs in California. The most significant laws that have recently come into effect include:
 - » [AB-1033 Accessory dwelling units: local ordinances: separate sale or conveyance](#) which authorizes local governments to adopt ordinances permitting the sale of ADUs separately from the primary residence as condominiums.
 - » [AB-976 Accessory dwelling units: owner-occupancy requirements](#) which prohibits a local agency from requiring owner-occupancy for property owners to build and rent an ADU.
 - » [AB-1154 Junior accessory dwelling units](#) which no longer requires owner-occupancy for Junior ADUs (JADU) as long as they have their own bathroom.
 - » [AB-1332 Accessory dwelling units: preapproved plans](#) which requires local agencies to develop a program for pre-approved ADU plans, with projects using these plans having to be approved or denied within 30 days.
 - » [SB-543 Accessory dwelling units and junior accessory dwelling units](#) which requires local agencies to determine if an ADU/JADU application is complete within 15 business days of submittal, revises ADU size to now be measured by "interior livable space", and now re-defines a JADU to be no more than 500 square feet of interior livable space.
 - » [SB-1211 Land use: accessory dwelling units: ministerial approval](#) which authorizes multi-family property owners to build up to eight detached ADUs on a single lot, provided that the number of ADUs does not exceed the number of existing primary units.
 - » [AB-2533 Accessory dwelling units: junior accessory dwelling units: unpermitted developments](#) which prohibits local agencies from denying permits for unpermitted ADUs/JADUs constructed before January 1, 2020, based on code violations unless the structure is a health or safety hazard.

In 2024, a total of 6,162 new residential units were permitted in Orange County, including those for ADUs (CDR, 2025). CDR projects that by 2050, approximately 13,000 more ADUs will be built in Orange County, with 1,206 ADUs expected within Mesa Water's service area. The increase in ADUs is likely to result in an increase in number of people per lot of land. Depending on whether the addition of ADUs results in a net replacement of irrigated area (or other high water use features such as swimming pools), ADUs could increase or decrease water demands.

CHAPTER 4 WATER USE CHARACTERIZATION

One of the main objectives of an Urban Water Management Plan (UWMP) is to provide an insight into the projected future water demands and supplies. This chapter describes Mesa Water District’s (District) current and future water demands for their service area, factors that influence demands, and the methodology used to forecast future water demands over the next 25 years. For this 2025 UWMP, water demand projections will span from planning year 2025 through planning year 2050.

Known for its suburban coastal communities and densely populated inland areas, Orange County has evolved greatly from its beginnings as an agricultural region. As some of the earliest cities in Orange County, the Cities of Anaheim, Fullerton, and Santa Ana all joined with 10 other southern California cities to form the Metropolitan Water District of Southern California (MET) in 1928 with the ambitious dream to bring Colorado River water across the Mojave Desert. The Municipal Water District of Orange County (MWDOC) later joined MET as a member agency in 1951, and with the merger with Coastal Municipal Water District in 2001, now represents the remainder of Orange County to provide and manage the imported water supplies within its service area. Orange County is now mostly comprised of residential, mixed-use, and commercial developments, with less industry in the region. Agriculture in the region has also declined significantly as Orange County has grown more suburban. Thus, modern-day water use within Orange County can be largely summarized by the following four demand sectors:

- Single-family Residential.
- Multifamily Residential.
- Commercial, Industrial, and Institutional (CII).
- Dedicated Irrigation (potable, recycled and raw water).

Figure 4.1 Historical Water Use and Population in Orange County

Figure 4.1 shows Orange County's overall historical water usage compared to population since 1990, when local water conservation programs were first established. As shown, from the early 1990s through the mid-2000s, Orange County's water usage increased as the population increased. Population figures slowed significantly in 2018 and began to decrease during the COVID-19 Pandemic in 2020-2021. Since 2007, retail, municipal, and industrial water use in Orange County has declined due to multiple contributing factors. Decades of sustained investments in water-use efficiency and public education have led to significant adoption of water-efficient appliances and fixtures, and increased public awareness of the need to use water wisely. Furthermore, in response to recurring droughts, growing urban demand, and increasingly limited water supplies, multiple regulatory requirements to promote water conservation have evolved and been implemented over the past two decades throughout California and Orange County.

Orange County's trending decline in water usage can most notably be attributed to Orange County water agencies' past efforts to achieve regional and individual compliance with Senate Bill (SB) X7-7, the Water Conservation Act of 2009, through the Orange County 20x2020 Regional Alliance and compliance with Executive Order (EO) B-29-15. EO B-29-15 mandated 25 percent reduction in potable water use in response to the 2013-2014 drought. Furthermore, Orange County water agencies' ongoing progress towards achieving SB 606 and Assembly Bill (AB) 1668, the *"Making Conservation a California Way of Life"* legislation, water use objectives continue to exemplify Orange County water agencies' commitment to water conservation, water use efficiency, and overall reduction in potable water usage in recent decades.

In 2025, MWDOC and Orange County Water District (OCWD), in collaboration with MWDOC's member agencies and the Cities of Anaheim, Fullerton, and Santa Ana, led the effort to develop the 2025 Orange County Water Demand Projection Model. The Orange County Water Demand Projection Model (MWDOC, 2025) was used to project long-term water demand under three hydrologic conditions (normal year, single dry year, and five consecutive dry years) over a 25-year horizon in 5-year increments, consistent with the 2025 UWMP requirements.

Figure 4.2 Projected Water Use Across All Orange County Water Agencies

Although Orange County demands are forecast to be relatively flat into the future, with water use efficiency efforts counterbalancing new growth, Figure 4.2 shows that annual variations in weather could cause high fluctuations. Some examples of this are described below:

- Single-family consumption is highly seasonal, and the model correlates well with seasonality and temperature by capturing fluctuations in single-family outdoor irrigation.
- Multi-family use is generally less responsive to weather than single-family demands, as much of multi-family outdoor irrigation has been shifted into the irrigation-specific water use sector (dedicated irrigation meters), and generally newer multi-family dwellings in Orange County have comparatively less landscaped area than generally older single-family dwellings due to Model Water Efficient Landscape Ordinances (MWELO) mandated since 1993. Seasonal price elasticity varies the least between months for the multi-family sector.
- Commercial, Industrial and Institutional use is positively correlated to each job proportion as well as gross domestic product throughout Orange County, which means a higher amount of CII jobs and production value trend in an increase in water demands.
- Irrigation is the most responsive to temperature and precipitation compared to the other sectors.

In terms of future development, north Orange County is substantially built out, with a majority residential land uses with some mixed-use areas dedicated to commercial, institutional, and governmental uses. Future developments planned in north Orange County are mainly redevelopment and infill projects. As for Mesa Water's service area specifically, future developments include a number of mixed use, industrial, and residential projects, housing to meet the Regional Housing Needs Assessment (RHNA) allocations for the cities within its service area, and Accessory Dwelling Units (ADU), which will all shape Mesa Water's future water use.

Water use within Mesa Water's service area has fluctuated in the past five years (Fiscal Year [FY] 2020-21 through FY 2024-25), with an annual average total water use of approximately 16,557 acre-feet (AF). Following one of the worst droughts in California history between 2017 and 2022, the significant wet year in 2023 saw a decrease in overall water use from FY 2021-22 to FY 2022-23 in Mesa Water's service area.

Water use in FY 2024-25 included 15,667 AF of potable water and 847 AF of non-potable water for landscape irrigation. Mesa Water's water use is primarily residential. The projected water use in 2050 is 17,590 AF for potable water and 577 AF for non-potable water.

4.1 Water Use in the Last Five Years

The five-year average water use within Mesa Water's service area is approximately 16,557 acre-feet per year (AFY) provided by potable and non-potable sources. Demand trends have remained flat due to water-use efficiency efforts and increased precipitation in recent wet years, such as FY 2023. As mentioned in Chapter 3, population within the service area is expected to increase in the long term. However, total demands have remained relatively stable due to ongoing water conservation programs and improved water use efficiency efforts.

FY 2020-21 through FY 2021-22 saw the highest water uses over the last five years due to region-wide drought conditions. FY 2022-23 proved to be one of the wettest years on record in the State and Mesa Water saw a general decrease in water demand following this wet year, as precipitation offsets landscape irrigation demands. These year-to-year fluctuations in precipitation will continue to influence Mesa

Water's annual demands. In general, Mesa Water saw a decrease in demands of 6.7 percent over the 5-year reporting period.

Table 4.1 presents Mesa Water's service area existing water use by source for direct uses. There are no indirect uses within Mesa Water's service area. As shown, Mesa Water's service area total water usage in FY 2024-25 was 16,515 AF. The total usage was met through a combination of potable and non-potable sources, including groundwater and recycled water. In FY 2024-25, about 94.9 percent of the total demand was met through Orange County Basin groundwater. In FY 2024-25, the total potable demand was 15,667 AFY, while 847 AFY or about 5.1 percent of the total demand was served with non-potable supplies for landscape irrigation.

Table 4.1 Submittal Table 4-1 Retail: Total Uses for Potable and Non-Potable Water – Actual

Submittal Table 4-1 Retail: 2025 Actual Total Uses for Potable and Non-Potable Water Water Code Section 10631(d)(1)			
Use Type	Additional Description (as needed)	2025 Actual Water Use	
Drop down list May select each use multiple times These are the only use types that will be recognized by the WUE data online submittal tool		Potable or Non-Potable (OPTIONAL) Drop down list	Volume (AF)
Single Family		Potable	4,247
Multi-Family		Potable	4,931
Institutional/Governmental		Potable	1,667
Commercial		Potable	3,414
Industrial		Potable	235
Landscape		Potable	54
Other (optional)	Hydrant Meters and Construction	Potable	27
Landscape	Title 22 tertiary treated recycled water	Non-Potable	847
Distribution System Water Loss		Potable	1,093
Subtotal Potable			15,667
Subtotal Non-Potable			847
Total			16,515
DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3. This table identifies the unit of measure selected in Submittal Table 2.3.			
NOTES: Distribution System Water Loss is calculated as the difference between total potable production and use for FY 2025.			

4.1.1 Potable Municipal and Industrial Use

Table 4.1 summarizes Mesa Water's potable water demand for FY 2024-25. As shown, a total of 15,667 AF of potable water was used. Mesa Water has a mix of single and multi-family residential water use which account for 58.6 percent of their total potable water demand. Combined CII use accounts for 33.9 percent of total potable demand while landscape irrigation accounts for 0.3 percent of total potable demand and other uses account for 0.2 percent of total potable demand. The total distribution system water loss to match supply and metered demand was calculated to be 1,093 AFY in FY 2024-25, or 7 percent of total

potable water demand. It should be noted that this differs from Mesa Water’s 653 AFY of water loss reported in the American Water Works Association (AWWA) Water Loss Audit for FY 2025, as the total Water Loss Audit accounts for authorized, unmetered demand such as Costa Mesa Sanitary District Sewer Clean In Place and Costa Mesa Fire Department’s use of Mesa Water District fire hydrants.

Considering the planned developments mentioned in Chapter 3, potable water demands are expected to increase in the future given the possibility of population increases.

4.1.2 Non-Potable Municipal and Industrial Use

Table 4.1 summaries Mesa Water’s non-potable, or outdoor irrigation, water demand for FY 2024-25. As shown, a total of 847 AF was used. Landscape irrigation accounts for 100 percent of total non-potable demand and encompasses delivery of Title 22 tertiary treated recycled water to the 43 recycled water customers within Mesa Water’s service area. Non-potable demands are not expected to increase in the future.

4.2 Projected Water Use

The water use projection for this UWMP is separated into a near-term period covering the next five years (2026-2030) and a long-term period extending from 2030 through 2050. Mesa Water recently completed their 10-year water capital improvement plan which included water use projections through 2035. For this UWMP, Mesa Water included these water use projections in Table 4.2. Furthermore, water use projections from 2035 through 2050 are based on the 2025 Orange County Water Demand Projection Model Technical Memorandum (TM), which is included in Appendix H of this UWMP. The methodology used in this demand forecast links water use statistically to a set of explanatory variables through a regression, or econometric, model. Section 4.3 offers a description of the methodology used to calculate Mesa Water’s demand projections.

4.2.1 Water Use Projections for 2026-2030

Total demands (direct) are met through groundwater and recycled water. Mesa Water’s total water demand projection for the next five years is shown in Table 4.2. As shown, Mesa Water’s total service area water demands are expected to have a net increase over the next five years (2026 to 2030) due to projected growth in the service area’s Municipal and Industrial (M&I) demands.

Table 4.2 Mesa Water District’s Service Area Total Potable and Non-Potable Demand for 2026-2030

Fiscal Year Ending	2026	2027	2028	2029	2030
Total Water Demand (AF)	16,794	17,073	17,353	17,632	17,911

Notes:
AF – acre-feet

4.2.2 Water Use Projections for 2030-2050

Mesa Water’s service area’s total water demands (by use type) for the next 25 years are shown in Table 4.3. As described in section 4.2, water use projections to 2035 were provided by Mesa Water’s recently completed water system capital improvement plan and projections from 2035 to 2050 were provided by the 2025 Orange County Water Demand Projection TM. By 2050, total water demand is

projected to be 17,767 AF, a 7.6 percent increase from the 2025 demand of 16,515 AFY. Table 4.4 indicates additional information for both future conservation efforts and low-income water demands included in the projections, while Table 4.5 presents the passive water savings included in Table 4.3 projections for 2030-2050.

Table 4.3 Submittal Table 4-2 Retail: Total Uses of Potable, and Non-Potable Water - Projected

Submittal Table 4-2 Retail: Total Uses of Potable, and Non-Potable Water - Projected Water Code Section 10631(d)(1)

DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2.3. This table identifies the unit of measure selected in Submittal Table 2.3.							
NOTES: (1) Source (up to 2035): Mesa Water District CIP Update. (2) Source (from 2040 onwards): 2025 Orange County Water Demand Projection Model Forecast for Mesa Water District.							

Table 4.4 Submittal Table 4-3 Retail: Inclusion in Water Use Projections

Submittal Table 4-3 Retail: Inclusion in Water Use Projections Water Code Section 10631 (a), 10631 (d)(4)(A), and 10631 (d)(4)(B)	
Are Future Water Savings Included in Projections? Drop down list (y/n)	Yes
If "Yes" to above, state the section or page number, in the cell to the right, where citations of the codes, ordinances, or otherwise are utilized in demand projections are found. <i>Optional</i> Suppliers may complete Optional Submittal Table 4-4 R to quantify the expected savings.	Chapter 4.3
Are Lower Income Residential Demands Included In Projections? Drop down list (y/n)	Yes
<i>Optional</i> If the method for accounting Lower Income Residential Demands has been included, provide page number where this accounting can be found.	Chapter 4.3
DWR NOTES: Additional guidance is provided in Appendix K.	
NOTES: Future water savings include passive conservation (defined as water savings that occur without incentives). Active conservation (defined as water savings that occur with incentives) is not included in the projections. The demand projection methodology accounted for the entire population of the service area (i.e., all income levels).	

Table 4.5 Optional Submittal Table 4-4 Retail: Passive Water Savings Projections

OPTIONAL Submittal Table 4-4 Retail: Passive Water Savings Projections Water Code Section 10631(d)(4)(A)					
Description (Codes, Standards, Ordinances, or Plans)	Passive Savings				
	2030 (AF)	2035 (AF)	2040 (AF)	2045 (AF)	2050 opt (AF)
Add additional rows as needed					
Passive Water Savings	187	194	199	201	201
DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2.3. This table identifies the unit of measure selected in Submittal Table 2.3.					
NOTES: Passive conservation here is defined as water savings that occur without incentives. Based on the 2025 Orange County Water Demand Projection Model, passive conservation is assumed to equal a 1.9 percent decrease in residential demand due to conservation by 2030 (linearly extrapolated), then remains constant in subsequent years.					

4.2.2.1 Potable Municipal and Industrial Use

As shown in Table 4.3, the total potable water demands are projected to reach 16,683 AF by the year 2050, a decrease of about 0.9 percent between 2030 and 2050. It is projected that combined single- and multi-family residential water use will account for 63.1 percent of total potable water demand, CII water use is expected to account for 22.3 percent, and landscape irrigation water use will account for 9.6 percent of total potable water use for Mesa Water by 2050. Combined distribution system water losses and other uses are expected to account for 846 AFY or 5.1 percent of total potable water demand by 2050.

4.2.2.2 Non-Potable Municipal and Industrial Use

As shown in Table 4.3, the total non-potable, or outdoor irrigation, water demands are projected to remain relatively constant and be 1,084 AF by the year 2050, per the 2025 Orange County Water Demand

Projection Model. Mesa Water does not anticipate any more users being connected to Mesa Water's recycled water system in the future.

4.3 Water Demand Projection Methodology

As described in section 4.2, Mesa Water used two different projection methodologies for water use from 2025 to 2035 and 2035 to 2050. The following sections briefly describe each one.

4.3.1 Water Demand Projections From 2025 to 2035

A population-based method was used to forecast water demand through 2035 for Mesa Water District Capital Improvement Program Update. Socioeconomic projections of population were provided by Southern California Association of Governments, a joint powers authority that encompasses six counties (Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura). The data was originally prepared for the 2024-2050 Regional Transportation Plan and Sustainable Communities Strategy, also known as Connect SoCal 2024. The Regional Housing Needs Assessment is included in the population projections, a process mandated by the State of California's housing laws to determine existing and future housing needs. The population within Mesa Water's service area is expected to increase from 108,360 in 2019 to 119,811 in 2035 according to an analysis of Transportation Analysis Zone level data provided by Southern California Association of Governments. This projection equates to an annual growth rate of approximately 0.6 percent.

4.3.1.1 Forecasted Demands

Discussed in detail in Technical Memorandum 1 – Water Demand of Mesa Water District Capital Improvement Plan Update (Appendix H), residential demand accounted for 67 percent of potable water billing in FY 2022 with the remaining 33 percent being non-residential demand. The residential indoor and outdoor per capita water demand during this year is 85.6 gallons per capita day. Assuming no increases due to employment or conservation, the projected demand is based on population growth only.

4.3.2 Water Demand Projection from 2035 to 2050

In 2025, MWDOC and OCWD, in collaboration with MWDOC's member agencies and the Cities of Anaheim, Fullerton, and Santa Ana, led the effort to develop the 2025 Orange County Water Demand Projection Model, (MWDOC, 2025). This effort developed a demand model by regressing historical water consumption data provided by each Orange County water agency against several explanatory variables known to influence water demand (including weather, water price, regional economic conditions, and housing density). The water demand projections were for the Orange County region as a whole and provided retail agency specific demands, spanning the years of 2025-2050. The full TM can be found in Appendix H.

The demand projections created four econometric, or regression, demand models representing the following four water billing sectors for each Orange County retail agency:

- Single-family Residential.
- Multifamily Residential.
- Commercial, Industrial, and Institutional (CII).
- Dedicated Irrigation (potable, recycled and raw water).

Prior to developing the forecasts, model calibration and fine tuning for each of the four demand sectors occurred at the individual retail agency level. The demand across all four models, plus other uses for each agency, is summed to a total forecast for each agency, the MWDOC service area, the OCWD service area, and total Orange County.

The demand projection methodology accounted for the entire population of each individual retail agency's service area (i.e., all income levels), thus accounting for the water demand projections for lower income households within Mesa Water's service area.

4.3.2.1 Econometric Approach, Data Acquisition, and Model Development

A regression, or econometric, approach to demand forecasting statistically links retail level water use to weather, economic, and socioeconomic factors (explanatory variables). The model relies on a comprehensive dataset of historical water-use data for almost 40 different billing sectors collected from Orange County retail agencies. MWDOC obtained explanatory variables from reputable sources, including weather databases and Census-based reports. The explanatory variables used in the regression were based on industry experience regarding what factors affect water use nationwide and in Southern California.

By statistically linking water use to explanatory variables, the econometric models provide a robust foundation for understanding variability and projecting future consumption patterns. Modeled water use is the product of the driver count (e.g., number of accounts), and the rate of water use per driver:

$$\text{Water Use} = \text{Driver Count} \times \text{Rate of Use per Driver}$$

Each of the four demand sectors modeled (single family, multifamily, CII, and irrigation) has a separate equation. Driver units change into the future based on housing, employment, and population projections. The rate of water use per driver is based on the historical response of the use rate to explanatory variables (measured by coefficients) and the future values of those same explanatory variables.

Linear regression produces the coefficients for each explanatory variable to closely reproduce the historical rate of use per driver unit. The coefficients explain how (both in terms of magnitude and sign) water use responds to changes to explanatory variables.

MWDOC identified driver units based on data provided by agencies and the Center for Demographic Research at California State University, Fullerton (CDR) that can be easily projected into the future. The rate of water use per driver is based on agency provided billing sector uses from 2010 through 2024. Table 4.6 shows the driver units and rate of use for each of the four models.

Table 4.6 Summary of Demand Sectors

Sector	Driver Units	Rate of Use Definition
Single-Family Residential	Accounts	Gallons/account/day
Multi-Family Residential		Gallons/account/day
Commercial, Institutional, Industrial (CII)	Jobs	Gallons/job/day
Dedicated Irrigation (potable, recycled & raw water)	Accounts	Gallons/account/day

The rates of water use for each sector model are based on the historical responses to explanatory variables, and the future values of those explanatory variables. Addressing multiple influences on demand improves the accuracy and precision of all estimated parameters, and the modeling team identified a large range of explanatory variables based on past experience with demand modeling and available data. Table 4.7 displays the explanatory variables.

Table 4.7 Summary of Historical Data Collected for Model Development

Dataset	Data Source(s)
Observed weather (monthly precipitation, monthly maximum temperature)	Parameter-elevation Regressions on Independent Slopes Model (PRISM)
Water Price	Retail agency provided (2010 – 2024)
Drought Restrictions	State Water Resources Control Board
Gross Domestic Product (GDP)	Federal Reserve Bank of St. Louis Real Gross Domestic Product: All Industries in Orange County, CA
Median Income	US Census American Community Survey (ACS)
Housing Density	US Census American Community Survey (ACS), California State University Fullerton Center for Demographics Research (CDR), Southern California Association of Government (SCAG) land use data
Persons Per Household	
Relative Sectoral Economic Activity	US Census LODES, CDR
Passive Efficiency Estimates	Analysis of trend indicators and MWD/FLUME insight
COVID-19 Binary Indicator	Assumed active from March 2020 – May 2023

The MWD/FLUME Water Use Efficiency Group provided annual water savings achieved by various active conservation measures. To avoid potential errors in the classification of historical conservation data, total historical conservation was modeled in each sectoral regression model using a linear trend to capture steady change over time. While historical conservation is captured in a linear trend, projected passive conservation is based on best available data from the 2021 Orange County Residential Water Efficiency Potential and Opportunities Study and assumes a 1.9 percent decrease in annual residential demand from 2025 to 2030, at which point passive conservation is projected to remain constant. Future active conservation is not accounted for in baseline demand forecast, as water savings from active programs (programs that require customers to change behavior) are highly specific to retail agencies and to the formulation and timing of their implementation.

The process of identifying the explanatory variables to include in the regression equation and developing coefficients that accurately measure the response of water use to changes in these variables is the most time-intensive part of the demand forecasting process.

Prior to developing the forecasts, model calibration and fine tuning for each of the four demand sectors occurred at the individual retail agency level. The modeling team worked with each retail agency to

calibrate sectoral model equations and quantify other uses (those not included in the single-family, multifamily, irrigation, or CII demand sectors).

Figure 4.3 presents the iterative process undergone to develop the econometric demand forecasts.

Figure 4.3 Econometric Demand Forecast Development Process

4.3.2.2 Forecasted Demands

Forecasted demand is a function of both the change in driver units into the future as well as the change in explanatory variables. Table 4.8 summarizes the future drivers and variables and assumptions for the baseline forecast. It should be noted that the CDR demographic forecast accounts for both the RHNA allocations and projected increase in ADUs. The 2022 Orange County Projections accounted for Draft RHNA rezone sites¹ with jurisdictions including the number of dwelling units that are most likely to occur/get built by the end of 2050 under assumptions and trends existing at the time of the forecasting effort.

Table 4.8 Future Model Parameters

Data Category	Variable	Source	Assumptions
Driver Units	Single-family and multifamily accounts	CDR	Historical households per account; averages are multiplied by households projected by CDR
	Irrigation accounts	Agency Billing Data	Accounts are assumed to be constant into the future
	Sectoral Employment	CDR	Proportion of jobs within CII sectors projected by CDR
Explanatory Variables	Monthly Maximum Temperature and Total Precipitation	PRISM	30-year historical normal weather
	Water Price	Retail Agencies	Prices increase by 3% per year above inflation for 2025-2030 and keeps pace with inflation thereafter (zero difference from inflation trend)
	Water Use Restrictions	State and Local Restrictions	None
	Seasonality		Sine/cosine functions to capture monthly pattern
	Median Income	US Census	Constant income at 2022 value (real dollars)
	Housing Density	CDR	Derived from CDR housing unit projections, assuming residential area remains at 2024 levels
	Persons Per Household	CDR	CDR projected demographics
	Gross Domestic Product	Federal Reserve	Long-term GDP trend
	Relative Sectoral Employment	CDR	Calculated based on CDR projections
	Passive Efficiency Estimates	Flume Insight	Assumes a 2% decrease in residential demand due to conservation by 2030 (linearly extrapolated), then no change
	COVID-19 Binary Indicator		None (occurred between March 2020 and May 2023)

¹ For the 2022 Orange County Projections, CDR collected initial draft input from local jurisdictions in September 2021 on their anticipated jurisdiction-level housing growth for each projection year. In December 2021-February 2022, CDR reviewed and extracted data from jurisdictions' draft housing elements to create a parcel-level inventory of additional housing capacity from sites that were to be rezoned to accommodate the 6th RHNA cycle. These were reviewed by jurisdictions in spring 2022. Jurisdictions completed the rezoning of the final sites after their housing elements were certified by the State Housing and Community Development Department starting in 2022. The final adopted rezone sites will feed into CDR's 2026 Orange County Projections.

The normal year scenario was provided by the baseline forecast. In this model, the single dry year scenario used a hot-dry index (HDI) to identify the year with the most weather-sensitive demand, with 2014 selected for most agencies. The multiple dry year was developed to describe the potential impact of consecutive dry years.

The forecasts for individual agencies, including Mesa Water’s, were then summed to the regional level, providing regionally consistent forecasts for all of Orange County.

4.4 Water Loss

Mesa Water has conducted annual water loss audits since 2015 per the American Water Works Association (AWWA) methodology per SB 555 to understand the relationship between water loss, operating costs and revenue losses. Non-revenue water for FY 2020-2024 consists of three components: real losses (e.g., leakage in mains and service lines, and storage tank overflows), apparent losses (unauthorized consumption, customer metering inaccuracies and systematic data handling errors), and unbilled water (e.g., hydrant flushing, firefighting). Table 4.9 summarizes the status of the last five years of water loss audit reporting for the water system. Reports can be found online at [WUEdata - Water Audit Plans](#). Understanding and controlling water loss from a distribution system is an effective way for the City to achieve regulatory standards and manage their existing resources.

Table 4.9 Submittal Table 4-5 Retail: Water Loss Audit Reporting

	2022	Yes
	2023	Yes
	2024	Yes
DWR NOTES: Suppliers will provide a link to the WUEdata submittals of their Water Loss Audit Reports.		
NOTES: Water Loss Audits reported in Fiscal Years (FY).		

Signed in 2018 and adopted in 2024, the “*Making Conservation a California Way of Life*” legislation (SB 606 and AB 1668) establishes a new framework for long-term improvements in urban water use efficiency and drought planning as California adapts to climate change impacts. Under the regulation, Suppliers must annually calculate Urban Water Use Objectives based on standards applied at the service-area scale, including the Water Loss Performance Standard developed by the State Water Resources Control Board to minimize water waste through system leaks. The Water Loss Performance Standard requires that Suppliers must meet the real water loss standard and apparent water loss standard by 2028.

Table 4.10 presents Mesa Water’s progress towards compliance with the 2028 Water Loss Standard, as of the time of writing this UWMP. The most recent AWWA Water Loss Audit for FY 2025 was utilized for the calculations presented.

Table 4.10 Submittal Table 4-6 Retail: Progress Towards 2028 Water Loss Standard

NOTES: Uses the Water Board's calculated water loss standards updated as of 01/30/2026 and AWWA Water Loss Audit for FY 2025. Connection count may differ from what is reported in Table 2.1 R for FY 2025.											

CHAPTER 5 CONSERVATION TARGET COMPLIANCE

The Water Conservation Act of 2009, also known as Senate Bill (SB) X7-7, mandated a 20 percent reduction in urban per-capita water use across California by 2020. To achieve this goal, the Act required each retail water supplier to establish an urban water-use target, contributing to the State's collective efforts. The Legislature stated that the combined reductions from all retail suppliers would fulfill the statewide legislative mandate.

The goal of this chapter is to allow the retail water supplier to report on their progress toward meeting their urban water-use targets in their Urban Water Management Plan (UWMP), pursuant to Water Code Section 10608.40. Suppliers that did not meet their 2020 target in 2020 are required to compare their 2025 water use to the 2020 target.

Retail water suppliers are required to comply with SB X7-7 individually or as a region in collaboration with other retail water suppliers or demonstrate they have a plan or have secured funding to be in compliance, in order to be eligible for water related state grants and loans.

When determining water use in an UWMP, two terms are often used interchangeably:

- **Daily Per-Capita Water Use.** The amount of water used per person per day. In the UWMP calculations, this is total water use within a service area, divided by population, and it is measured in gallons.
- **Gallons Per-Capita Per Day (GPCD).** This is the "daily per-capita water use" measured in gallons. Therefore, the term commonly used when referring to "daily per-capita water use" is "gallons per-capita per day" or GPCD¹.

5.1 Reporting Requirements

Municipal Water District of Orange County's (MWDOC) Water Use Efficiency (WUE) programs helped Orange County meet the state's 20x2020 mandate by coordinating conservation efforts across its member agencies, funding and implementing regionally cost-effective efficiency programs, and enabling compliance through the Orange County 20x2020 Regional Alliance. By aligning its WUE portfolio directly with SB X7-7 requirements, supporting high-impact measures (especially outdoor water savings), documenting eligible indirect potable reuse credits, and centrally handling regional target calculations and reporting, MWDOC allowed participating retailers to comply collectively rather than individually resulting in regional per-capita water use well below the required 2020 target.

As a result of MWDOC's WUE program, all Orange County water retailers, including all MWDOC's member agencies and the participating cities of Anaheim, Fullerton, and Santa Ana, achieved compliance prior

¹ It is important to distinguish GPCD (as used in UWMPs) from the Residential Gallons Per Capita Per Day (R GPCD) that is used in some reporting to the California State Water Resources Control Board (SWRCB). GPCD is the total water use from all sectors within a service area (residential, commercial, institutional, and any others) minus allowable exclusions (as defined in SB X7 7), then divided by the population. This is used in UWMPs. R-GPCD is only a part of the GPCD; it is the estimated residential water use in a service area divided by population.

to 2020. The following table with information taken from the 2020 UWMP verifies that Mesa Water District met their SB X7-7 requirement. A discussion of programs implemented to support the achievement of the agency's per capita water reduction goals is covered in Section 9 – Demand Management Measures of this UWMP.

Table 5.1 Submittal Table 5-1 Retail: SB X7-7 2020 Target Progress

☐		Check the box if the Supplier was not an Urban Water Supplier during or before the 2020 UWMP reporting cycle. Proceed to the next table.				
Was Supplier part of a merger or consolidation since 2020?	Regional Alliance Target or Individual Target? Drop down list	2020 Target	Actual 2020 GPCD	Did Supplier Achieve Targeted Reduction for 2020?	Only for suppliers that did not meet the Target in 2020 See DWR NOTES below.	
					Actual 2025 GPCD (From SB X7-7 Compliance Form)	Did Supplier meet the 2020 Target in 2025?
No	Individual Target	143	85	Yes		NA
DWR NOTES: Suppliers calculating a 2025 GPCD will need to complete and submit SB X 7-7 Compliance Tables to verify the use of SB X7-7 Methodologies. Suppliers that were part of a merger or consolidation since 2020 see Chapter 5 and Appendix P for guidance. NA=Not Applicable						
NOTES: Supplier met the 2020 target, actual 2025 GPCD not required.						

CHAPTER 6 WATER SUPPLY CHARACTERIZATION

Orange County has a water supply portfolio made up from a variety of local and imported sources. Groundwater is produced from the Orange County Basin, which is managed by the Orange County Water District (OCWD). To enhance the reliability of groundwater, OCWD has implemented projects and programs over the years that include: (1) the Groundwater Replenishment System (GWRS), which is the world's largest water purification system for indirect potable reuse; (2) increased stormwater capture for groundwater recharge; and (3) participation in the Santa Ana River Conservation and Conjunctive Use Program (SARCCUP), a collaborative, watershed-scale approach for groundwater basin management, replenishment, and water transfers.

Imported water is provided by the Metropolitan Water District of Southern California (MET), the wholesale water provider to 26 member agencies in Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura Counties. MET's imported water sources are delivered through its own Colorado River Aqueduct (CRA) and the California Aqueduct, under contract with the State Water Project (SWP). To enhance its reliability of its imported water, MET has implemented many programs such as canal lining and transfers of agricultural water, land fallowing programs with irrigation districts, water banking programs, and use of its storage reservoirs.

Local and imported water sources in Orange County are managed in such a way that they complement each other. For example, during wet and normal years additional MET water is purchased for groundwater replenishment in the Orange County Basin. During dry and drought years, when imported water is more limited, more groundwater can be produced to meet Orange County water demands. This coordinated management of water supplies has resulted in reliable water service even during multi-year droughts. Based on the water supply assessment described in this chapter and in Chapter 7, the Orange County region will continue to receive a reliable water supply through the next 25 years.

Specifically, this chapter includes: (1) descriptions of each water supply source and their management; (2) quantification of water supply sources through 2050 under normal, dry, and multi-dry weather conditions; (3) opportunities for exchanges and transfers; and (4) discussion regarding any planned or potential future water supply projects. This chapter also includes the energy intensity of the water service.

6.1 Water Supply Overview

Mesa Water meets all of its potable water demands with local groundwater. Mesa Water works together with the Municipal Water District of Orange County (MWDOC) and OCWD to ensure a safe and reliable water supply that will continue to serve the community in periods of average, dry and drought hydrologic conditions. MWDOC is the Orange County wholesaler of imported water and one of MET's 26 member agencies. MET's imported water is delivered from the California SWP and MET's CRA to Southern California. If Mesa Water needs imported water to supplement its local groundwater supplies, Mesa Water can purchase imported water through MWDOC.

Local supplies developed by other entities and retail agencies include groundwater, recycled water, and surface water. Local sources presently account for 100 percent of Mesa Water's water supplies, whereby groundwater is the major source of local supply. The primary source of groundwater originates from the

Orange County Basin (OC Basin), which is located in the middle portion of MWDOC’s service area and is managed by OCWD. The GWRS is a joint project between OCWD and the Orange County Sanitation District (OC San). Using advanced treatment, recycled wastewater is transformed into a high-quality water supply for groundwater replenishment.

Mesa Water’s main source of water supply is groundwater from the OC Basin. Recycled water makes up the rest of Mesa Water’s water supply portfolio. In Fiscal Year (FY) 2024-25, Mesa Water used 100 percent local water supplies, relying on 94 percent groundwater and 6 percent recycled water (Table 6.1). Imported water is available as an emergency backup or supplemental supply, however Mesa has met all of its potable water demands with local groundwater. Imported water supply has not been a significant supply source for Mesa Water since 2013. In FY 2018, Mesa Water accepted MET water “in lieu” of pumping groundwater to help MET clear space in its reservoirs for snowmelt.

In 2025, MWDOC developed a water demand forecast model for its participating water agencies that statistically correlates municipal and industrial (M&I) water use with demographic, socioeconomic, conservation and weather variables—as reported in the 2025 Orange County Water Demand Projection Model Technical Memorandum (TM) (MWDOC, 2025). Because the model isolates weather, future water demand projects can be estimated under single and multiple-year droughts and under future climate change scenarios.

It is projected that by 2050, Mesa Water’s water portfolio be approximately 94 percent groundwater and 6 percent recycled water (Table 6.2 and Figure 6.1). It should be noted that these representations of supply match the projected demand. Note that the GWRS supplies are included as part of groundwater pumping numbers.

The following subsections provide a detailed discussion of Mesa Water’s water sources as well as the future water supply portfolio for the next 25 years.

Figure 6.1 Projected Water Supply

NOTES: Sources – Mesa Water CIP for groundwater projections through 2035, MWDOC, 2025 for groundwater projections from 2040 through 2050, Mesa Water, 2026 for recycled water.							

6.2 Imported Water

If needed, Mesa Water can supplement its water supply with imported water purchased from MET through MWDOC. In FY 2024-25, Mesa Water relied on no imported water to meet its demands.

MET's two principal sources of water are the Colorado River and the SWP. MET receives water from the Colorado River through the CRA and from the SWP through the California Aqueduct. For Orange County, the water obtained from these sources is treated at the Robert B. Diemer Filtration Plant located in Yorba Linda. Typically, the Diemer Filtration Plant receives a blend of Colorado River water from Lake Mathews through the MET Lower Feeder and SWP water through the Yorba Linda Feeder.

6.2.1 Metropolitan Water District of Southern California

MET is the largest water wholesaler in California, serving approximately 19 million customers in a 5,200 square mile service area. MET wholesales imported water supplies to 26 member agencies located in the six southern California counties of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura.

MET is governed by a Board of Directors comprised of 38 appointed individuals with a minimum of one representative from each of MET's 26 member agencies. The allocation of directors and voting rights is determined by each agency's assessed valuation. Each member of the Board is entitled to cast one vote for each ten million dollars of assessed valuation of property taxable for district purposes, in accordance with Section 55 of the Metropolitan Water District Act. Directors may be appointed by the chief executive officer of the member agency or by a majority vote of the agency's governing board. Directors are not compensated by MET for their service (The Metropolitan Water District Act, 1969).

MET is responsible for importing water into the region through its operation of the CRA, which brings Colorado River supply to its service area, and its SWP contract, which brings water from northern California via the California Aqueduct. MET supplements its direct deliveries of imported supplies with its storage reservoirs, water transfers, agricultural irrigation water conservation, and water banking programs. Major imported water aqueducts bringing water to southern California are shown in Figure 6.2. The Los Angeles Aqueduct, shown in the figure, is owned and operated by the Los Angeles Department of Water and Power, and not part of MET's imported water supplies. Member agencies receive water from MET through various delivery points and pay for service through a rate structure comprising volumetric rates, capacity charges, and readiness-to-serve charges. Member agencies provide MET with estimates of imported water demand in April each year, indicating the amount of water they anticipate they will need to meet their demands over the next five years.

MWDOC purchases both treated potable and untreated water from MET to supplement its retail agencies' local water supplies and for groundwater replenishment. Figure 6.3 illustrates the MET feeders and major transmission pipelines that deliver water within Orange County.

Figure 6.2 Major Aqueducts that Supply Imported Water to Southern California (MET, 2025)

Figure 6.3 MET Feeders and Transmission Mains that Serve Orange County

6.2.2 Colorado River Aqueduct

6.2.2.1 Background

The Colorado River was MET's original source of water after MET's establishment in 1928. The original founding members created MET with the goal to build the CRA to bring water to Southern California. The CRA, which is owned and operated by MET, transports water from the Colorado River to its terminus Lake Mathews, in Riverside County. The actual amount of water per year that may be conveyed through the CRA to MET's member agencies is subject to the availability of Colorado River water. Approximately 40 million people rely on the Colorado River and its tributaries for potable water with 5.5 million acres of land using Colorado River water for irrigation. The CRA includes supplies from the implementation of the Quantification Settlement Agreement (QSA) and its related agreements to transfer water from agricultural agencies to urban uses. The 2003 QSA enabled California to implement major Colorado River water conservation and transfer programs to stabilize water supplies and reduce the state's demand on the river to its 4.4 million acre-feet (MAF) entitlement. Colorado River transactions are potentially available to supply additional water up to the CRA capacity of 1.25 MAF on an as-needed basis. Water from the Colorado River or its tributaries is available to users in California, Arizona, Colorado, Nevada, New Mexico, Utah, Wyoming, and Mexico. California is apportioned the use of 4.4 MAF of water from the Colorado River each year plus one-half of any surplus that may be available for use collectively in Arizona, California, and Nevada. In addition, California has historically been allowed to use Colorado River water apportioned to, but not used by, Arizona or Nevada. MET has fourth-priority rights, with a basic entitlement of 550,000 acre-feet per year (AFY) of Colorado River water, plus surplus water up to an additional 662,000 AFY when the following conditions exist (MET, 2025):

- Water is unused by the California holders of priorities 1 through 3.
- Water is saved by the Palo Verde land management, crop rotation, and water supply program.
- When the U.S. Secretary of the Interior makes available either one or both of the following:
 - » Surplus water.
 - » Colorado River water that is apportioned to but unused by Arizona and/or Nevada.

6.2.2.2 Current Conditions and Supply

The Colorado River supply faces current and future imbalances between water supply and demand in the Colorado River Basin due to reductions in snowpack, long-term drought conditions, and climate change. The last 25-year period has been called a megadrought, with Lake Mead's elevation dropping from a high of 1,215 feet in 2000 to its lowest level of 1,040 feet in July 2022. While extreme wet conditions resulted in lake levels exceeding 1,077 feet in February 2024, levels have been persistently hovering around 1,057 feet since May of 2025. The United States Bureau of Reclamation (USBR) projects that there is a 53 percent likelihood that Lake Mead elevation could fall below 1,035 feet, which would trigger water shortages for MET under the current operating guidelines. As of August 2025, Lake Mead storage was approximately 31 percent of capacity per USBR's 24-Month Study, which also projected continued Lower Basin shortage conditions in 2026 (MET, 2025).

The current operating guidelines for the Colorado River expire at the end of 2026, and a new, long-term operating plan must be in place by November 2026 to manage the river's water supply. The ongoing Colorado River allocation negotiations are focused on creating a post-2026 operating plan, with states

and the federal government aiming for consensus on how to manage the river's declining water supply due to the severe, prolonged drought in the Colorado River Basin. The drought on the Colorado River began around 2000 and has continued, in various degrees of severity, for over two decades, making it a historic megadrought that has significantly reduced water flow into the river and lowered water levels in reservoirs like Lake Powell and Lake Mead. Although some periods, like the wet winter of 2023, brought temporary relief with increased snowfall, they were not enough to fully replenish the system or overcome the prolonged lack of water and effects of climate change, such as aridification and increased evaporation according to the United States Geological Survey (USGS) 2024. Under the 2007 Interim Guidelines, together with the Lower Basin Drought Contingency Plan (2019), the Intentionally Created Surplus (ICS) program has allowed MET to store conserved water in Lake Mead for subsequent recovery; these frameworks sunset with the Guidelines at the end of 2026 and are expected to be addressed in the post-2026 rules (MET, 2025).

The USBR, which is part of the U.S. Department of the Interior, is the federal agency leading the negotiations and responsible for managing the river system. The ongoing Colorado River negotiations aim to find a fair and sustainable way to allocate the available water, which is significantly less than in the past. Talks are centering on a "natural flow" proposal that divides water based on current river conditions, rather than historical allocations. However, states remain at odds over how much water to allocate to the Upper and Lower Basins, with the federal government planning to impose its own plan if an agreement is not reached by the November 2026 deadline. Some key challenges that remain to be resolved are the different interests of the Upper Basin states (Colorado, Utah, Wyoming, New Mexico) and the Lower Basin states (California, Arizona, Nevada) to reach consensus on how much water the Upper Basin should send downstream. In addition, Tribal nations are also seeking recognition of their rights and a role in the future management of the river. Given MET's junior priority status within California's Colorado River priority system, reductions to MET's supplies are a possibility under future operating criteria; MET's planning reflects this risk (MET, 2025).

Consistent with MET's 2025 Urban Water Management Plan (UWMP), supply capability planning uses USBR's August 2023 Colorado River Simulation System assumptions, including a climate-adjusted flow reduction factor of approximately 9.3 percent per 1°C of warming over the planning horizon (2025-2050). MET continues to utilize supply, storage, transfer, and conservation programs, including ICS participation under the current Guidelines, to manage risk and buffer shortages. In addition, conserved QSA-related transfer water delivered at Lake Havasu (including Imperial Irrigation District and canal-lining exchanges) is categorized in MET's 2025 UWMP as Colorado River imported supply (previously treated as local supply), aligning accounting with current practice (MET, 2025).

6.2.2.3 MET Colorado River Current Programs

Over the years, MET has helped fund and implement various programs to improve Colorado River supply reliability and help resolve the imbalance between supply and demand. Implementation of such programs has contributed to achievements such as a record-low diversion of the Colorado River in 2019, a level not seen since the 1950s. Colorado River water management programs include:

- **Imperial Irrigation District / MET Conservation Program** – Under agreements executed in 1988 and 1989, this program allows MET to fund water efficiency improvements within Imperial Irrigation District's service area in return for the right to divert the water conserved by those investments. An average of 105,000 AFY of water has been conserved since the program's implementation.

- **Palo Verde Land Management, Crop Rotation, and Water Supply Program** – Authorized in 2004, this 35-year program allows MET to pay participating farmers to reduce their water use, and for MET to receive the saved water. Over the life of the program, an average of 84,500 AFY has been saved and made available to MET.
- **Bard Seasonal Fallowing Program** – Authorized in 2019, and subsequently expanded, this program allows MET to pay participating farmers in Bard to reduce their water use between the late spring and summer months of selected year. Under expanded program authorizations through 2026 (Quechan Seasonal Fallowing Program), this program can provide up to approximately 12,000 AFY in certain years.
- **Management of MET-Owned Land in Palo Verde** – Since 2001, MET has acquired approximately 21,000 acres of irrigable farmland that are leased to growers, with incentives to grow low water-using crops and experiment with low water-consumption practices. MET continues to evaluate opportunities to formally account for verified long-term water savings associated with these lands as part of its Colorado River supply reliability strategy.
- **Southern Nevada Water Authority (SNWA) and MET Storage and Interstate Release Agreement** – Entered in 2004, this agreement allows SNWA to store its unused, conserved water with MET, in exchange for MET to receive additional Colorado River water supply. MET has relied on the additional water during dry years, especially during the 2011-2016 California drought, and SNWA is not expected to call upon MET to return water until after 2026.
- **Lower Colorado Water Supply Projects** – Authorized in 1980s, this project provides up to 10,000 AFY of water to certain entities that do not have or have insufficient rights to use Colorado River water. A contract executed in 2007 allowed MET to receive project water left unused by the project contractors along the River – nearly 10,000 acre-feet (AF) were received in recent years when unused supplies were available.
- **Exchange Programs** – MET is involved in separate exchange programs with the USBR, which takes place at the Colorado River Intake and with San Diego County Water Authority (SDCWA), which exchanges conserved Colorado River water.
- **Lake Mead Storage Program** – Executed in 2006 and subsequently integrated with Lower Basin Drought Contingency Plan (DCP) operations, MET may intentionally leave conserved water in Lake Mead for exclusive future use. MET has significantly expanded its use of ICS storage in recent years, including record storage creation (450,000 AF) in 2023 under DCP-related conservation programs.
- **Quagga Mussel Control Program** – Developed in 2007, this program introduced surveillance activities and control measures to combat quagga mussels, an invasive species that impact the Colorado River's water quality.
- **Lower Basin Drought Contingency Plan** – Signed in 2019, this agreement incentivizes storage in Lake Mead through 2026 and overall, it increases MET's flexibility to fill the CRA as needed (MET, 2025).
- **Lower Basin Conservation and System Efficiency Programs** – In recent years, MET has participated in new, multi-agency conservation and system efficiency programs implemented between 2023 and 2026. These programs incentivize agricultural conservation, system efficiency improvements, urban conservation, and groundwater storage in the Lower Colorado River Basin, with the goal of

reducing system demands and increasing storage in Lake Mead during critically dry conditions. This includes programs such as the Quechan Diversion Forbearance program.

The Colorado River faces long-term challenges of water demands exceeding available supply with additional uncertainties due to climate change. Climate change impacts expected in the Colorado River Basin include the following:

- More frequent, more intense, and longer lasting droughts, which will result in water deficits.
- Continued dryness in the Colorado River Basin, which will increase the likelihood of triggering a first-ever shortage in the Lower Basin.
- Increased temperatures, which will affect the percentage of precipitation that falls as rain or snow, as well as the amount and timing of mountain snowpack (MET, 2025).

Given these uncertainties, MET plans to continue implementing and expanding Colorado River conservation, storage, exchange, and transfer programs, while also supporting increased water recycling and system efficiency improvements within the Colorado River Basin. MET continues to evaluate additional transfer and conservation opportunities to further enhance regional supply reliability through the 2025 UWMP planning horizon.

6.2.3 State Water Project

6.2.3.1 Background

The SWP consists of a series of pump stations, reservoirs, aqueducts, tunnels, and power plants operated by California Department of Water Resources (DWR) and is an integral part of the effort to ensure that business and industry, urban and suburban residents, and farmers throughout much of California have sufficient water. Water from the SWP originates at Lake Oroville, which is located on the Feather River in Northern California. Much of the SWP water supply passes through the Sacramento-San Joaquin Delta (Delta). The SWP is the largest state-built, multipurpose, user-financed water project in the United States. Nearly two-thirds of residents in California receive at least part of their water from the SWP, with approximately 70 percent of SWP's contracted water supply going to urban users and 30 percent to agricultural users. The primary purpose of the SWP is to divert and store water during wet periods in Northern and Central California and distribute it to areas of need in Northern California, the San Francisco Bay area, the San Joaquin Valley, the Central Coast, and Southern California (MET, 2025).

The Delta is key to the SWP's ability to deliver water to its agricultural and urban contractors. All but five of the 29 SWP contractors receive water deliveries below the Delta (pumped via the Harvey O. Banks or Barker Slough pumping plants). However, the Delta faces many challenges concerning its long-term sustainability, such as climate change posing a threat of increased variability in floods and droughts. Sea level rise complicates efforts in managing salinity levels and preserving water quality in the Delta to ensure a suitable water supply for urban and agricultural use. Furthermore, other challenges include continued subsidence of Delta islands, many of which are already below sea level, and the related threat of catastrophic levee failure as water pressure increases or following a major seismic event.

In May 2019, DWR withdrew its permit for the two-tunnel WaterFix project in favor of a smaller one-tunnel project alternative. In July 2022, the draft Environmental Impact Report (EIR) for the recommended Delta Conveyance Project alternative was issued, with the project potentially operational by 2040, though its implementation faces strong opposition by environmental organizations and other

interests in the Delta. The maximum value of the Delta Conveyance Project, when coupled with 250,000 AF of new regional storage, is estimated to be 367,000 AFY for MET and 63,000 AFY for Orange County. The Delta Conveyance Project also reduces the probability that any shortage occurs by about 10 percent, meaning a doubling of the time between shortage conditions from once every 5 years to once every decade (MWDOC, 2023).

6.2.3.2 Current Conditions and Supply

Just like the Colorado River, the amount of water that can be delivered from the SWP to its 29 contractors varies annually based on hydrology and reservoir storage along the SWP. The DWR publishes the maximum entitlement of SWP water for each water contracting agency in "Table A." DWR sets these allocations to balance the needs for human health and safety, agricultural, and municipal water, considering factors like reservoir storage, runoff forecasts, and Endangered Species Act (ESA) requirements. The primary drivers that influence allocations are hydrologic conditions (precipitation and snowmelt) along with storage levels, especially in Lake Oroville. Actual deliveries typically average less than 50 percent of Table A due to hydrologic and regulatory constraints (MET, 2025). MET's actual annual allocations based on springtime Table A values for the past UWMP cycles are summarized in Table 6.3.

Table 6.3 MET SWP Program Capabilities

Year	Average Annual Table A Spring Allocation (MAF)
2015	0.38
2020	0.38
2025	0.96
Percent Change ⁽¹⁾	+252.6%

Notes:

(1) Percent change is between the years 2020 and 2025. Source: SWP Allocations 1996-2026.

SWP contractors may additionally receive Article 21 water on a short-term basis in addition to Table A water if requested. Article 21 of SWP contracts allows contractors to receive additional water deliveries only under specific conditions, generally during wet months of the year (December through March). Because a SWP contractor must have an immediate use for Article 21 supply or a place to store it outside of the SWP, there are few contractors like MET that can access such supplies (MET, 2025).

Carryover water is SWP water allocated to an SWP contractor and approved for delivery to the contractor in a given year but not used by the end of the year. The unused water is stored in the SWP's share of San Luis Reservoir, when space is available, for the contractor to use in the following year (MET, 2025).

Turnback pool water is Table A water that has been allocated to SWP contractors who have exceeded their demands. This water can then be purchased by another contractor depending on its availability (MET, 2025).

The following factors affect the ability to estimate existing and future water delivery reliability:

- **Water availability at the source:** Availability can be highly variable and depends on the amount and timing of rain and snow that fall in any given year. Generally, during a single dry year or two, surface and groundwater storage can supply most water deliveries, but multiple dry years can result in critically low water reserves. Fisheries issues can also restrict the operations of the export pumps even when water supplies are available.

- **Water rights with priority over the SWP:** Water users with prior water rights are assigned higher priority in DWR's modeling of the SWP's water delivery reliability, even ahead of SWP Table A water.
- **Climate change:** Mean temperatures are predicted to vary more significantly than previously expected. This change in climate is anticipated to bring warmer winter storms that result in less snowfall at lower elevations, reducing total snowpack. From historical data, DWR projects that by 2050, the Sierra snowpack will be reduced from its historical average by 25 to 40 percent. Increased precipitation as rain could result in a larger number of "rain-on-snow" events, causing snow to melt earlier in the year and over fewer days than historically, affecting the availability of water for pumping by the SWP during summer. Furthermore, water quality may be adversely affected due to the anticipated increase in wildfires. Rising sea levels may result in potential pumping cutbacks on the SWP and CVP. DWR's recent planning documents and the Draft 2025 DCR describe climate-adjusted "existing conditions" baselines and future scenarios used by agencies for UWMPs.
- **Regulatory restrictions on SWP Delta exports:** The federal Biological Opinions (BiOps) protect special-status species such as delta smelt and spring- and winter-run Chinook salmon and imposed substantial constraints on Delta water supply operations through requirements for Delta inflow and outflow and export pumping restrictions. Restrictions on SWP operations imposed by state and federal agencies contribute substantially to the challenge of accurately determining the SWP's water delivery reliability in any given year (DWR, [2020]b).
- **Ongoing environmental and policy planning efforts:** Following the 2019 withdrawal of WaterFix, DWR certified the Delta Conveyance Project Final EIR and approved the Bethany alignment in December 2023, a key modernization initiative for the SWP. EcoRestore and related habitat efforts continue to advance.
- **Delta levee failure:** The levees are vulnerable to failure because most original levees were simply built with soils dredged from nearby channels and were not engineered. A breach of one or more levees and island flooding could affect Delta water quality and SWP operations for several months. When islands are flooded, DWR may need to drastically decrease or even cease SWP Delta exports to evaluate damage caused by salinity in the Delta.

It can be concluded that the federal regulatory framework affecting the Bay-Delta's ecosystem, species, and water supply are constantly evolving by adapting to new scientific information, changing climate conditions, and legal challenges. This dynamic and complex regulatory landscape, along with hydrologic and storage conditions along the SWP, continues to result in water supply uncertainties that impact all SWP contractors, including MET, MWDOC, and its member agencies (MET, 2025).

6.2.3.3 SWP Programs/Plans

In the past five years, MET has updated and implemented planning, regulatory, infrastructure, and operational programs to improve the reliability of the SWP supplies while addressing environmental, seismic, and climate-related risks in the Delta and along the California Aqueduct. Key SWP programs and planning efforts include:

- **SWP BiOps and California Incidental Take Permit** – Updated federal BiOps and a California ITP issued in 2024 provide a new operating framework intended to improve flexibility and species

protection. The 2025 MET UWMP characterizes the net reliability benefit at approximately +60,000 AFY relative to prior permits, subject to hydrologic and regulatory conditions.

- **Healthy Rivers and Landscapes (HRL) Voluntary Agreements** – MET supports the State’s proposed Healthy Rivers and Landscapes program, which establishes a voluntary framework for improving Delta ecosystem conditions through coordinated flow contributions and habitat restoration projects. The HRL approach is intended to provide regulatory stability while supporting environmental objectives consistent with SWP operations.

6.2.4 Storage, Transfers, and Conveyance Programs

Storage is a major component of MET’s dry year resource management strategy. MET’s likelihood of having adequate supply capability to meet projected demands, without implementing its Water Supply Allocation Plan (WSAP) depends on its storage resources. Following a significant drawdown during the 2020-2022 drought, MET rebuilt storage as hydrologic conditions improved. By the end of 2023, MET had approximately 3.4 MAF of regional dry-year storage. Storage increased to 3.8 MAF by the end of 2024, with levels projected to reach approximately 3.9 MAF by the end of 2025. MET also maintains approximately 750 TAF of emergency storage dedicated to catastrophic supply interruption conditions, including a major seismic failure of the Delta levees.

In its 2025 UWMP, MET evaluates storage based on median starting storage at the beginning of each five-year increment, representing a 50 percent probability that actual storage will be higher or lower. This approach differs from earlier UWMPs, which relied on average storage assumptions, and provides a more conservative and realistic representation of storage availability. All storage capability values incorporate conveyance and recovery constraints associated with SWP terminal reservoirs, the CRA, and MET’s in-region and out-of-region groundwater banking programs.

Lake Oroville continues to serve as the SWP’s largest storage facility with a capacity of approximately 3.5 MAF. Water released from Oroville moves to the Feather River and then to the Sacramento River before being pumped south at the Harvey O. Banks pumping plant into the California Aqueduct. MET’s storage portfolio includes surface reservoirs such as Diamond Valley Lake, Lake Mathews, and Lake Skinner; SWP terminal storage in San Luis Reservoir; groundwater banking programs including Semitropic, Arvin-Edison, the High Desert Water Bank, Kern Delta, and Mojave; and ICS storage in Lake Mead. These storage assets provide operational flexibility during dry years and help maintain supplies during extended droughts or emergency events.

MET endeavors to increase the reliability of water supplies through the development of flexible storage and transfer programs including groundwater storage (MET, 2025). These include:

- **Semitropic Storage Program:** The maximum storage capacity of the program is 350,000 AF, and the minimum and maximum annual yields available to MET are 34,700 AF and 236,200 AF, respectively. The specific amount of water MET can expect to store in and subsequently receive from the program depends on hydrologic conditions, any regulatory requirements restricting MET’s ability to export water for storage and demands placed by other program participants. During wet years, MET has the discretion to use the program to store portions of its SWP supplies which are in excess, and during dry years, the Semitropic Water Storage District returns MET’s previously stored water to MET by direct groundwater pump-in or by exchange of surface water supplies.

- **Arvin-Edison Storage Program:** The storage program is estimated to deliver 75,000 AF, and the specific amount of water MET can expect to store in and subsequently receive from the program depends on hydrologic conditions and any regulatory requirements restricting MET's ability to export water for storage. During wet years, MET has the discretion to use the program to store portions of its SWP supplies which are in excess, and during dry years, the Arvin-Edison Water Storage District returns MET's previously stored water to MET by direct groundwater pump-in or by exchange of surface water supplies.
- **Antelope Valley-East Kern (AVEK) Water Agency Exchange and Storage Program:** Under the exchange program, for every 2 AF MET receives, MET returns 1 AF back to AVEK, and MET will also be able to store up to 30,000 AF in the AVEK's groundwater basin, with a dry-year return capability of 10,000 AF.
- **High Desert Water Bank Program:** Developed in partnership with Antelope Valley-East Kern Water Agency, this regional groundwater banking program allows MET to store up to 280,000 AF of SWP Table A or other available supplies in the Antelope Valley groundwater basin. The program provides a put-and-take capability of up to approximately 70,000 AF per year, with infrastructure including monitoring and production wells, California Aqueduct turnouts, pipelines, recharge basins, and pump facilities. Phase 1 became operational in 2023, with full build-out expected by approximately 2030.
- **Kern-Delta Water District Storage Program:** This groundwater storage program has 250,000 AF of storage capacity, and water for storage can either be directly recharged into the groundwater basin or delivered to Kern-Delta Water District farmers in lieu of pumping groundwater. During dry years, the Kern-Delta Water District returns MET's previously stored water to MET by direct groundwater pump-in return or by exchange of surface water supplies.
- **Mojave Storage Program:** MET entered into a groundwater banking and exchange transfer agreement with Mojave Water Agency that allows for the cumulative storage of up to 390,000 AF. The agreement allows for MET to store water in an exchange account for later return.
- **Diamond Valley Lake to Rialto Pipeline** – Planned for completion in 2028, this project creates new conveyance that improves the ability to move non-SWP supplies (120 cubic feet per second (cfs), including CRA and banked water) into areas historically dependent on SWP deliveries, increasing drought and seismic resilience.
- **Sepulveda Feeder Pump Stations (Stage 1)** – This program includes pumping improvements that expand westward movement of CRA/SWP/banked supplies across service areas to address localized system constraints. Pumping capacity is expected to be 30 cfs upon completion of Stage 1 in 2027.
- **Richvale & Western Canal Water Transfers** – These multi-year transfer options will provide supplemental dry-year supplies when available, with volumes up to approximately 54,000 AF (2025-2027).
- **Yuba Accord Extension** – This project is a continuation of an established dry year transfer program from the Yuba watershed that can be accessed subject to hydrologic and regulatory conditions. As of 2025, the extension is under negotiation for approximately 250,000 AFY in supply.
- **San Bernardino Valley MWD Surplus SWP Program** – Programmatic access to surplus SWP supplies (approximately 13,0000 AFY) will be available from SBVMWD under certain hydrologic and operational conditions.

6.2.5 Potential Future Water Projects

6.2.5.1 Climate Adaptation Master Plan for Water

In February 2023, the MET's Board directed its staff to integrate water resources planning, climate resilience planning, and financial planning into a *Climate Adaptation Master Plan for Water* (CAMP4W). Then a Joint Task Force of Board Members and Member Agency Managers was convened to facilitate the development of CAMP4W in a timely and transparent process. The main elements of CAMP4W include:

1. Identify climate and growth scenarios, building from analyses conducted for MET's *Integrated Resources Plan* (IRP);
2. Develop time-bound targets for new regional water supplies and system improvements;
3. Establish a framework for decision-making and annual reporting;
4. Form policies, initiatives, and partnerships; and
5. Evaluate business models and funding strategies

Because investments for regional supply reliability and system resilience are significant, it is important that decisions are made through an adaptive management process to avoid the risks associated with over-investment or under-performance. Tracking signposts and progress towards time-bound targets is therefore critical for CAMP4's annual reporting. Currently, regional projects being explored by MET include Pure Water Southern California, new reservoir storage in Southern California of up to 155,000 AFY, regional seawater desalination, and participation in California's Delta Conveyance Project. These projects will be scored against the following CAMP4W criteria: (1) reliability; (2) resilience; (3) financial; (4) adaptability/flexibility; (5) equity; and (6) environmental co-benefits.

Pure Water Southern California – The potential Pure Water Southern California program, a partnership with the Sanitation Districts, will purify wastewater that currently flows to the ocean to produce high quality recycled water. The purified water would be delivered to Metropolitan's member agencies to meet their groundwater replenishment and storage requirements. The 2025 MET UWMP does not include Pure Water yield in projected supplies (MET, 2025).

Sites Reservoir – This potential project includes a water storage reservoir of 1.5 MAF and would require the construction of two large dams up to 310 feet high and nine smaller saddle dams. The water stored in the reservoir, located north of Sacramento, would be diverted from the Sacramento River during high flow events and returned to the Sacramento River during dry and critical years, thereby providing additional dry-year water for environmental flows and project partners including SWP agencies south of the Delta. The current operations model estimates the annual water yield of the Sites Reservoir Project at approximately 270 TAF per year by 2032, when the Sites Reservoir Project is scheduled to be operational (MET, 2025). The 2025 MET UWMP does not include Sites Reservoir in projected supplies (MET, 2025).

Delta Conveyance Project – Following the withdrawal and termination of the California WaterFix project, the State advanced a new single-tunnel Delta Conveyance Project to address seismic risk, sea-level rise, extreme weather, and regulatory uncertainty while improving long-term SWP delivery reliability. The environmental review was completed in 2023 and DWR has approved the project. Potential yield used in planning analyses is on the order of approximately 400,000 AFY, but the 2025 MET UWMP does not include Delta Conveyance Project yield in projected supplies pending future milestones and contracting decisions (MET, 2025).

6.2.6 Supply Reliability within MET

MET's 2025 UWMP reports on its water reliability and identifies projected supplies to meet the long-term demand within its service area. The MET 2025 UWMP discusses the current water supply conditions and long-term plans for supply implementation and continued development of a diversified resource mix. It describes the programs being implemented, such as the CRA, SWP, Central Valley storage/transfer programs, water use efficiency programs, local resource projects, and in-region storage that will enable the region to meet its water supply needs. MET's 2025 UWMP also presents MET's supply capacities from 2025 through 2050 for average year, single dry year, five consecutive dry years, and more frequent and severe droughts, as specified in the UWMP Act.

Information concerning MET's UWMP, including the background, associated challenges, and long-term development of programs for each of MET's supply sources and capacities have been summarized and included in the following subsections. Additional information on MET can be found directly in MET's 2025 UWMP.

6.2.6.1 MET's Water Service Reliability Assessment Results

In MET's 2025 UWMP, MET evaluated supply reliability by projecting supply and demand under a normal year, single-dry year, and five-year consecutive dry years, based on conditions affecting the SWP (MET's largest and most variable supply). For this supply source, the average of historical years 1922-2021 most closely represents water supply conditions in a normal water year, the single driest year was 1977 and the five-year dry period was 1988-1992. The analyses also include Colorado River supplies under the same hydrological variations.

MET also incorporated the SWP and Colorado River's reliability factors, such as water quality objectives set by the SWRCB, BiOps, and amendments to the Coordinated Operations Agreement for the SWP and Quantification Settlement Agreements for the Colorado River into their assessment.

MET has concluded that the region can provide reliable water supplies under normal, single-dry, and five-year consecutive dry conditions (Table 6.4, Table 6.5, Table 6.6, respectively).

In each of the following tables, "Current Programs" supplies include:

- In-Region Supplies and Programs:
 - » Metropolitan Surface Storage (Diamond Valley Lake, Lake Mathews, Lake Skinner).
 - » Flexible Storage in Castaic Lake and Perris Lake.
 - » Groundwater Storage for Conjunctive Use.
- California Aqueduct (SWP), including Central Valley transfers and storage program supplies conveyed by the aqueduct.
- Colorado River Aqueduct, including deliveries, programs, and exchanges with SDCWA.

These supplies are impacted - typically reduced - by the single dry year and multiple dry year scenarios. Though demands increase in these drought conditions, MET projects reliable supply, even surplus, through 2050. MWDOC is a MET member agency, and MET's projections take into account the imported demands from Orange County. As so, MET's water reliability assessments are used to determine that demands within MWDOC can be met for all three hydrological conditions.

4. Maximum CRA deliveries limited to 1.25 MAF including Exchange with SDCWA.
5. Total demands are adjusted to include Exchange with SDCWA.

6.2.6.2 MET's Drought Risk Assessment Results

For its Drought Risk Assessment (DRA), MET assessed the reliability of each individual water supply source over the five-consecutive-year drought through a modeling method using the same historical hydrologic conditions as the water service reliability assessment: 1922 to 2021. MET used the five consecutive years of 1988 to 1992 to complete its DRA, because this represents the driest five-consecutive year historical sequence for MET's supply. Even without activating Water Shortage Contingency Plan (WSCP) actions, according to MET's 2025 UWMP Table 2-8, MET's water supply from the SWP and CRA can reliably meet the demands of a five-year drought from FY 2025-26 through FY 2029-30 (Table 6.7).

6.3 Local Groundwater

Among all local supplies available to Mesa Water’s service area, groundwater supplies make up the majority, with the primary supply from the OC Basin. The water supply resources within Mesa Water’s service area are enhanced by the existence of groundwater basins, which provide a reliable local source and, additionally, are used as reservoirs to store water during wet years and draw from storage during dry years. Table 6.8 shows a breakdown of historical groundwater production by Mesa Water.

Mesa Water pumps groundwater through seven active groundwater wells. Seven of these active wells pump “clear” groundwater directly into the distribution system, following disinfection with chloramines. Clear wells are subject to OCWD’s Basin Production Percentage (BPP). Additionally, two wells that pump amber colored groundwater from a deeper aquifer are first treated at the Mesa Water Reliability Facility (MWRF). Treated groundwater is then pumped into the distribution system. This groundwater production is exempt from the Basin Equity Assessment (BEA), extra fees for pumping beyond the BPP. As of early 2026, Mesa Water wells are not affected by per and polyfluoroalkyl substances (PFAS).

This section describes the groundwater basin(s) used by Mesa Water and provides a 25-year projection of the service area’s groundwater supply (Table 6.8).

Table 6.8 Submittal Table 6-1 Retail: Groundwater Pumped in Past 5 Years Within Mesa Water’s Service Area (AF)

Submittal Table 6-1 Retail: Groundwater Volume Pumped Water Code Section 10631(4) and 10631(4)(c)							
Groundwater Type	Water Type (Potable/ Non-Potable)	Location or Basin Name	2021	2022	2023	2024	2025
			(AF)	(AF)	(AF)	(AF)	(AF)
Alluvial Basin		Orange County Groundwater Basin	16,551	16,326	14,778	14,860	15,667
Total			16,551	16,326	14,778	14,860	15,667
NOTES: Source – MWDOC, 2025. These values include groundwater pumped from both clear wells and MWRF amber wells.							

6.3.1 Orange County Groundwater Basin

This section describes the OC Basin and the management measures taken by OCWD, the basin manager and member agency of MWDOC, to optimize local supply and minimize overdraft.

The OCWD was formed in 1933 by a special legislative act of the California State Legislature to protect and manage the County’s vast, natural, groundwater supply using the best available technology and defend its water rights to the OC Basin. This legislation is found in the State of California Statutes, Water – Uncodified Acts, Act 5683, as amended. The OC Basin is managed by OCWD under the Act, which functions as a statutorily-imposed physical solution. The OCWD Management Area includes approximately 89 percent of the land area of the OC Basin, and 98 percent of all groundwater production occurs within the area. Approximately 2.5 million residents live within OCWD’s boundaries and rely upon the basin for their primary water supply. OCWD manages water resource monitoring programs, land use elements related to basin management, groundwater elevation, groundwater quality, and coastal area monitoring through a number of monitoring programs. OCWD monitors the basin by collecting groundwater elevation and quality data from approximately 400 District-owned wells and manages an

electronic database that stores water elevation, water quality, production, recharge, and other data on over 2,000 wells and facilities within and outside OCWD boundaries (OCWD, 2023). For detailed monitoring programs and management information, refer to the 2022 Basin 8-1 Alternative Plan (Appendix E).

Groundwater levels are managed within a safe basin operating range to protect the long-term sustainability of the OC Basin and to protect against land subsidence. OCWD, a member of agency of MWDOC, purchases untreated water from MET for basin recharge, as needed. In addition, OCWD regulates groundwater levels in the OC Basin by regulating the annual amount of pumping and setting the BPP for the water year. As defined in the District Act, the BPP is the ratio of water produced from groundwater supplies within the OCWD service area to all water produced within the area from both supplemental sources and groundwater within the OCWD (OCWD, 2020a). More information regarding the BPP is discussed in Section 6.3.1.3.

6.3.1.1 Basin Characteristics

The OC Basin underlies the northern half of Orange County beneath broad lowlands. The OC Basin, managed by OCWD, covers an area of approximately 350 square miles, bordered by the Coyote and Chino Hills to the north, the Santa Ana Mountains to the northeast, and the Pacific Ocean to the southwest. The OC Basin boundary extends to the Orange County-Los Angeles Line to the northwest, where groundwater flows across the county line into the Central Groundwater Basin of Los Angeles County. A map of the OC Basin is shown on Figure 6.4. The total thickness of sedimentary rocks in the OC Basin is over 20,000 feet, with only the upper 2,000 to 4,000 feet containing fresh water. The OC Basin's estimated full storage volume is approximately 66 MAF.

There are three major aquifer systems that have been subdivided by OCWD, namely the:

- Shallow Aquifer System.
- Principal Aquifer System.
- Deep Aquifer System.

These three aquifer systems are hydraulically connected as groundwater can flow between each other through intervening aquitards or discontinuities in the aquitards. The Shallow Aquifer system occurs from the surface to approximately 250 feet below ground surface. Most of the groundwater from this aquifer system is pumped by small water systems for industrial and agricultural use. The Principal Aquifer system occurs at depths between 200 and 1,300 feet below ground surface. Over 90 percent of groundwater production is from wells that are screened within the Principal Aquifer system. Only a minor amount of groundwater is pumped from the Deep Aquifer system, which underlies the Principal Aquifer system and is up to 2,000 feet deep in the center of the OC Basin.

Figure 6.4 Map of the OC Basin (OCWD, 2022)

6.3.1.2 Sustainable Groundwater Management Act

In 2014, the State of California adopted the Sustainable Groundwater Management Act (SGMA) to promote sustainable groundwater management and limit “undesirable results” including significant groundwater-level declines, land subsidence, and water quality degradation. SGMA requires all high- and medium-priority basins, as designated by DWR, to be sustainably managed. DWR designated the Coastal Plain of Orange County Groundwater Basin (Basin 8-1) as a medium-priority basin, primarily due to heavy reliance on groundwater as a water supply source.

Compliance with SGMA can be achieved in one of the following two ways (OCWD, 2023):

1. Formation of a Groundwater Sustainability Agency (GSA) and adoption of a Groundwater Sustainability Plan (GSP).
2. Preparation of submittal of an Alternative to a GSP by eligible agencies, including special act districts such as OCWD.

Agencies within Basin 8-1, including OCWD, the City of La Habra, and the Irvine Ranch Water District (IRWD), collaborated to submit the original Alternative to a GSP in 2017, titled the “Basin 8-1 Alternative” to demonstrate compliance with SGMA. Under SGMA, alternatives and GSPs must be updated every 5-years. OCWD prepared its first periodic update in 2022

For the remainder of this report, when the term “OC Basin” is used, it refers to the portion of Basin 8-1 that is within OCWD’s service area (see Figure 6.5).

Figure 6.5 Basin 8-1 Management Areas (OCWD, 2023)

6.3.1.3 Basin Production Percentage

Background

The OC Basin is not adjudicated; therefore, groundwater production is managed through a framework that uses financial incentives to encourage sustainable pumping. The framework is based on the BPP, which represents the percentage of each Producer's total water supply that comes from groundwater pumped from the OC Basin. Groundwater production at or below the BPP is assessed by the Replenishment Assessment (RA). While there is no legal limit as to how much an agency pumps from the OC Basin, there is a financial impact to pump above the BPP. The BPP is set uniformly for all Producers by OCWD on an annual basis. Agencies that pump above the BPP are charged the RA plus the BEA. The BEA is calculated so that the cost of groundwater production above the BPP is equivalent to the cost of importing potable water supplies. This approach ensures there is no financial advantage for production above the BPP. The BEA can be increased to discourage production above the BPP if necessary.

The BPP is set annually by OCWD based on groundwater conditions, availability of imported water supplies, and OC Basin management objectives. The supplies available for recharge must be estimated for a given year. The estimated supplies of recharge water include: 1) stormflow from the Santa Ana River and Santiago Creek, 2) natural incidental recharge, 3) Santa Ana River baseflow, 4) GWRS supplies, and 5) other supplies such as imported water and recycled water purchased for the Alamitos Barrier. The BPP is a major factor in determining the cost of groundwater production from the OC Basin. For the 2026–27 water year, OCWD maintained a BPP of 85 percent. Under normal hydrologic conditions, groundwater production could reach approximately 315,000 AFY. However, actual production in FY 2026–27 is expected to be approximately 299,000 AFY due to PFAS-related impacts that continue to limit groundwater availability among several producers.

BPP Adjustments for Basin Management

OCWD has established management guidelines that are used to establish future BPPs, as seen in Table 6.9. Raising or lowering the BPP allows OCWD to manage the amount of pumping from the basin. OCWD has a policy to manage the groundwater basin within a sustainable range to avoid adverse impacts to the basin. OCWD seeks to maintain some available storage space in the basin to maximize surface water recharge when such supplies are available, especially in relatively wet years. By keeping the basin relatively full during wet years, and for as long as possible in years with near-normal recharge, the maximum amount of groundwater could be maintained in storage to support pumping in future drought conditions. During dry hydrologic years, when less water is available for recharge, the BPP could be lowered to maintain groundwater storage levels. A component of OCWD's BPP policy is to manage the groundwater basin so that the BPP will not fluctuate more than 5 percent from year to year.

The OCWD's GWRS came online in 2008 with a capacity of approximately 70 million gallons per day (mgd) and was expanded to 100 mgd in 2015. In 2023, it was expanded again to a final capacity of 130 mgd. The GWRS provides a resilient local water supply that recharges the OC Basin with advanced treated wastewater. The additional yield supported OCWD's move to raise the BPP from the long-standing approximately 77 percent level prior to 2023 to 85 percent beginning in February 2023. Monthly water-resources reports show agencies achieving 86 percent to 88 percent pumping shares after the final expansion in late-2024 to early-2025, which reflects increased reliance on local groundwater supplies enabled by GWRS production along with the reduced water demands of approximately 400,000 AFY.

Modeling and forecasts generate estimates based on historical averages. Consequently, forecasts use average hydrologic conditions, which smooth the dynamic and unpredictable local hydrology. Variations in local hydrology are the most significant impact to supplies of water available to recharge the groundwater basin. The current BPP of 85 percent is based on modeling of average annual rainfall weather patterns and estimated groundwater recharge volumes. If OCWD were to experience a relatively dry period, the BPP could be reduced to maintain water storage levels, along with other management actions shown in Table 6.9.

Table 6.9 Management Actions Based on Changes in Groundwater Storage

Available Storage Space ⁽¹⁾	Basin Management Action to Consider
Less than 100,000 AF	Raise BPP
100,000 to 300,000 AF	Maintain and / or raise BPP towards 85% goal
300,000 to 350,000 AF	Seek additional supplies to refill basin and / or lower the BPP
Greater than 350,000 AF	Seek additional supplies to refill basin and lower the BPP

Notes:

(1) Amount below full basin condition.

Basin Equity Assessment Exemptions

In some cases, OCWD encourages treating and pumping groundwater that does not meet drinking water standards to protect water quality. This is achieved by using a financial incentive called the BEA Exemption. A BEA Exemption is used to promote beneficial uses of poor-quality groundwater and reduce or prevent the spread of poor-quality groundwater into non-degraded aquifer zones. OCWD uses a partial or total exemption of the BEA to compensate a qualified participating agency or Producer for the costs of treating poor quality groundwater, which typically include capital, interest and operations and maintenance costs for treatment facilities (City of La Habra et al., 2017). Similarly, for proactive water quality management, OCWD occasionally exempts a portion of the BEA for their Coastal Pumping Transfer Program (CPTP). The CPTP encourages inland groundwater producers to increase pumping and coastal producers to decrease pumping to reduce the groundwater basin drawdown at the coast and protect against seawater intrusion. Inland pumpers can pump above the BPP without having to pay the full BEA for the amount pumped above the BPP (OCWD, 2015). Coastal pumpers receive BEA revenue from OCWD to assist in offsetting their additional water supply cost from taking less groundwater.

OCWD Resilience Plan

To address evolving conditions within OCWD's service area, it is important to anticipate potential challenges and proactively plan for strategies that sustain and enhance water supply reliability, water quality, and overall system resilience. The OCWD Resilience Plan is an adaptive management plan that evaluates future water demands and available supplies, while also identifying potential projects and response strategies to address risks to key District assets, including the groundwater basin, Santa Ana River, groundwater replenishment facilities, and natural resources.

The plan builds on OCWD's historical planning efforts and provides a flexible, project-based framework to maintain sustainable basin conditions and strengthen the long-term resilience of the District's water resources over a 5- to 25-year planning horizon.

The Resilience Plan also supports evaluation of future water supply projects, recharge strategies, and operational improvements to guide management of the OC Basin under changing hydrologic, regulatory, and demand conditions.

The Basin 8-1 Alternative submitted to DWR in 2017 showed that Basin 8-1 had been sustainably managed for the prior 10 years, which was a SGMA requirement. Based on avoiding undesirable results as defined in SGMA, the OC Basin has been sustainably managed since the construction of the Talbert Seawater Intrusion Barrier in the mid-1970s. Required annual reports and periodic updates submitted to DWR show that Basin 8-1 continues to be sustainably managed.

Current water demand projections show a relatively slow increase over the 25-year planning horizon, which is generally of similar magnitude as the additional production from the GWRS since its final expansion in early 2023 to 130 mgd. This locally controlled, drought proof supply of water reduces the region's dependence on imported water.

Historically, the Santa Ana River has served as the primary source of water to recharge the OC Basin. To determine the availability of future Santa Ana River flows, OCWD utilized surface water flow modeling of the upper watershed. Modeling was developed to predict the impacts future stormwater capture and wastewater recycling projects in the upper watershed would have on future Santa Ana River flow rates at Prado Dam. Santa Ana River base flows are expected to decrease as more water recycling projects are built in the upper watershed. OCWD continues to work closely with the US Army Corps of Engineers (USACE) to temporarily impound and slowly release up to approximately 20,000 AF of stormwater in the Prado Dam Conservation Pool. The amount of water that can be temporarily impounded in the conservation pool has grown over time and in 2025, it was increased to over 25,000 AF. To some extent, the losses in baseflow are partially offset through the capture of additional stormwater held in the Prado Dam Conservation Pool. When available, OCWD will continue to augment groundwater recharge through the purchase of imported water through MET. OCWD will diligently monitor and evaluate future water supply projects to sustainably manage and protect the OC Basin for future generations.

OCWD Engineer's Report

The OCWD Engineer's Report documents groundwater conditions and evaluates water supply and Basin utilization within OCWD's service area. The most recent report is the 2024–25 Engineer's Report filed in March 2026. As reported, the BPP for the 2024–25 water year was maintained at 85 percent by the OCWD Board of Directors. The overall BPP achieved within OCWD for non-irrigation use was 83.8 percent, with the reduced achievement attributed primarily to PFAS-related well shutdowns. Groundwater stored in the Basin decreased by 50,000 AF for the 2024–25 water year, and the annual overdraft was 165,300 AF, which reflects the amount by which natural replenishment was exceeded. The decrease in storage was reflected by a relatively dry year and the total groundwater recharge of 252,214 AF, which included contributions from supplemental water recharged by the GWRS.

For the 2026–27 water year, OCWD is proposing to maintain a BPP of 85 percent. Under normal hydrologic conditions, groundwater production could reach approximately 315,000 AF; however, OCWD anticipates groundwater production during 2026–27 will be approximately 299,000 AF due to PFAS-related impacts that continue to limit groundwater availability among several producers.

It is estimated that approximately 13,500 AF of additional production above the BPP will be undertaken by the City of Tustin, City of Huntington Beach, Mesa Water District, and Irvine Ranch Water District to support groundwater quality improvement projects. As in prior years, groundwater produced above the BPP for these water-quality projects will be partially or fully exempt from the BEA due to the Basin-wide benefit of pumping and treating poor-quality groundwater.

During the 2024–25 water year and current 2025-26 water year, MET untreated full-service water supplies were available for groundwater replenishment; however, OCWD did not purchase replenishment water due to favorable Basin storage conditions. OCWD likewise does not plan to purchase untreated full-service water for replenishment in 2026-27.

6.3.1.4 Recharge Management

Recharging water into the OC Basin through natural and artificial means is essential to support pumping from the OC Basin. Active recharge of groundwater began in 1936, in response to increasing drawdown of the OC Basin and, consequently, the threat of seawater intrusion. The OC Basin's primary source of recharge is supplied from the Santa Ana River, which is diverted into recharge basins and its main Orange County tributary, Santiago Creek. Other sources of recharge water include natural infiltration, recycled water, and imported water. Natural recharge consists of subsurface inflow from local hills and mountains, infiltration of precipitation and irrigation water, recharge in small flood control channels, and groundwater underflow to and from Los Angeles County and the ocean.

Recycled water for OC Basin recharge is from two sources. The main source is the GWRS, which completed its final expansion in 2023 and now produces up to 130 mgd of advanced-purified water for recharge at the Talbert Seawater Barrier and in the Kraemer, Miller, Miraloma, and La Palma basins. The second source is recycled water purified at the Water Replenishment District of Southern California's (WRD) Leo J. Vander Lans Advanced Water Treatment Facility, which provides up to 8 mgd for injection at the Alamitos Seawater Barrier (owned and operated by the Los Angeles County Department of Public Works). In recent years, WRD's upgrades and operations have increased the use of recycled water at the Alamitos Barrier and reduced reliance on imported supplies. Injection of recycled water into these barriers is an ongoing effort by OCWD (in coordination with WRD and Los Angeles County) to control seawater intrusion into the OC Basin; operation of the injection wells forms a hydraulic barrier to seawater intrusion.

OCWD also purchases imported water for recharge through MWDOC. Untreated imported water can be used to recharge the OC Basin through the surface recharge system at multiple locations, such as Anaheim Lake, the Santa Ana River, Irvine Lake, and San Antonio Creek, while treated imported water may be used for in-lieu recharge when appropriate. For current planning context and detailed recharge management strategies, refer to OCWD's most recent planning documents, including the 2024 OCWD Resilience Plan, in addition to prior foundational documents (Appendix E).

6.3.1.5 MET Imported Water for Groundwater Replenishment

In the past, OCWD, MWDOC, and MET have coordinated water management to increase storage in the OC Basin when imported supplies are available for this purpose. MET's groundwater replenishment program was discontinued on January 1, 2013, and currently MET via MWDOC sells replenishment water to OCWD at the full-service untreated MET rate. Figure 6.6 shows MWDOC's imported water sales to OCWD since FY 1990-91, which averages approximately 27,888 AF per year. In three of the past five water years, OCWD did not need to purchase more imported water to replenish groundwater.

Figure 6.6 MWD Imported Water Sales for Groundwater Replenishment

6.3.2 Planned Future Groundwater Sources

Mesa Water has plans for a local supply improvement project involving brackish water desalination. This project would increase supply up to 1,000 AFY by 2035-2040. This project is further described in Section 6.9.

On a regional scale, OCWD regularly evaluates potential projects and conducts studies to review the feasibility of new projects or sources. Groundwater basin-related projects that are planned or in progress are described below:

Forecast Informed Reservoir Operations (FIRO) at Prado Dam – Stormwater represents a significant source of water used by OCWD to recharge the OC Basin. Much of this recharge is made possible by the capture of Santa Ana River stormflows behind Prado Dam in the Conservation Pool. FIRO represents the next generation of operating water reservoirs using the best available technology. Advances in weather and stormwater runoff forecasting hold promise to allow USACE to safely impound more stormwater while maintaining equivalent flood risk management capability behind Prado Dam. Analyses indicate that FIRO would increase average annual recharge by approximately 4,000–6,000 AFY, and up to 23,000 AF in very wet years, consistent with earlier preliminary analyses. Federal and local partners have indicated FIRO at Prado Dam is moving from technical assessment toward implementation via Water Control Manual updates.

6.4 Surface Water

6.4.1 Existing Surface Water Sources

There are, currently, no direct stormwater uses in Mesa Water's service area.

6.4.2 Planned Future Surface Water Sources

As of 2025, there are no planned stormwater uses in Mesa Water's service area.

6.5 Stormwater

6.5.1 Existing Stormwater Sources

There are, currently, no direct stormwater uses in Mesa Water's service area.

6.5.2 Planned Future Stormwater Sources

As of 2025, there are no planned stormwater uses in Mesa Water's service area.

6.6 Wastewater and Recycled Water

Mesa Water is not directly involved in wastewater services and does not own or operate the wastewater collection system or wastewater treatment facilities in its service area. The Costa Mesa Sanitary District (CMSD) provides wastewater collection within Mesa Water's service area to 25,000 parcels via 325-miles of sewer line. However, CMSD does not own a wastewater treatment plant and therefore the wastewater that is collected is conveyed to OC San facilities for treatment and disposal.

Recycled water is wastewater that is treated through primary, secondary and tertiary processes and is acceptable for most non-potable water purposes such as irrigation, and commercial and industrial process water per Title 22 requirements. Recycled water opportunities have continued to grow in Southern California as public acceptance and the need to expand local water resources continues to be a priority. Recycled water also provides a degree of flexibility and added reliability during drought conditions when imported water supplies are restricted. Mesa Water is indirectly involved in recycled water production, through its supply of wastewater for indirect potable reuse (IPR). The following sections expand on the existing agency collaboration involved in these efforts, as well as Mesa Water's projected recycled water use over the next 25 years.

6.6.1 Agency Coordination

Mesa Water does not own or operate wastewater treatment facilities and sends all collected wastewater to OC San for treatment and disposal. OC San provides treated water to OCWD, the manager of the Orange County Groundwater Basin. OCWD is the manager of the Orange County Groundwater Basin and strives to maintain and increase the reliability of the Orange County Groundwater Basin through replenishment with imported water, stormwater, and advanced treated wastewater. A full description of the Orange County Groundwater Basin is available in Section 6.3.1. OCWD and OC San have jointly

constructed and expanded two water recycling projects to meet this goal that include: 1) OCWD Green Acres Project (GAP) and 2) OCWD GWRS.

6.6.1.1 Orange County Sanitation District

OC San collects wastewater from residential, commercial, and industrial customers in 20 cities, four special districts, and portions of unincorporated Orange County, totaling 479 square miles that serves more than 2.6 million residents in northwest and central Orange County (OC San, 2025). These flows include dry weather urban runoff collected from 15 diversion points and discharged into the sewer system for treatment and Santa Ana River Interceptor flows from the upper Santa Ana watershed (OC San, 2017).

OC San operates and maintains two treatment plants: Reclamation Plant No. 1, located in Fountain Valley with a capacity of 320 mgd, and Reclamation Plant No. 2 located in Huntington Beach with a capacity of 312 mgd. OC San also operates 572 miles of collection system pipelines along with 15 offsite pump stations. Approximately 150 mgd of secondary effluent undergoes advanced treatment at the GWRS facility operated by the OCWD and 7 mgd undergoes tertiary treatment at OCWD's GAP facility. Treated wastewater is discharged to the Pacific Ocean via an ocean outfall in compliance with state and federal requirements as set forth in OC San's National Pollutant Discharge Elimination System (NPDES) permit. OC San's ocean outfall is 120-inch diameter and extends five miles off the coast of Huntington Beach. A 78-inch diameter emergency outfall also exists that extends 1.3 miles off the coast (OC San, 2017).

OC San Reclamation Plant No. 1 - Reclamation Plant No. 1 treats raw wastewater and has a maximum treatment capacity of 320 mgd. The plant provides primary and secondary treatment and supplies secondary effluent to OCWD for further tertiary treatment at their GAP facility and advanced treatment at their GWRS. Reclamation Plant No. 1 is the only plant that provides water to OCWD for additional treatment and recycling. An interplant pipeline allows flows to be conveyed to Treatment Plant No. 2.

OC San Treatment Plant No. 2 - Treatment Plant No. 2 provides primary and secondary treatment to raw wastewater and has a maximum treatment capacity of 312 mgd. All secondary effluent from their plant is discharged to the ocean through the ocean outfall.

6.6.1.2 Orange County Water District

OCWD is the manager of the OC Basin and provides water to 19 municipal water agencies and special districts. A full description of the OC Basin is available in Section 6.3.1. OCWD and OC San have jointly constructed and expanded two water recycling projects that include: 1) OCWD GAP and 2) OCWD GWRS.

OCWD GAP

OCWD owns and operates the GAP, a water recycling system that treats up to 7.5 mgd and provides 8,400 AFY of recycled water for irrigation and industrial uses. GAP provides an alternate source of water that is mainly delivered to parks, golf courses, greenbelts, cemeteries, and nurseries in the cities of Costa Mesa, Fountain Valley, Newport Beach, and Santa Ana. Approximately 100 customer sites use GAP water, current recycled water users include Mile Square Park and Golf Courses in Fountain Valley, Costa Mesa Country Club, Chroma Systems carpet dyeing, Kaiser Permanente, and Caltrans.

OCWD GWRS

OCWD's GWRS allows southern California to decrease its dependency on imported water and creates a local and reliable source of water. OCWD's GWRS purifies secondary treated wastewater from OC San to levels that meet and exceed all state and federal drinking water standards. The GWRS Phase 1 plant has been operational since January 2008 and uses a three-step advanced treatment process consisting of MF, RO, and ultraviolet light with hydrogen peroxide. A portion of the treated water is injected into the seawater barrier to prevent seawater intrusion into the groundwater basin. The other portion of the water is pumped to ponds where the water percolates into deep aquifers and becomes part of Orange County's water supply. The treatment process is described on OCWD's website. (OCWD, GWRS, 2020).

The GWRS first began operating in 2008 producing 70 mgd and in 2015, it underwent a 30 mgd expansion. Approximately 39,200 AFY of the highly purified water is pumped into the injection wells and 72,900 AFY is pumped to the percolation ponds in the City of Anaheim where the water is naturally filtered through sand and gravel to deep aquifers of the groundwater basin. The OC Basin provides approximately 77 percent of the potable water supply for north and central Orange County. The design and construction of the first phase (78,500 AFY) of the GWRS project was jointly funded by OCWD and OC San; Phase 2 expansion (33,600 AFY) was funded solely by OCWD.

The Final Expansion of the GWRS is the third and final phase of the project and was completed in 2023. The plant now produces 130 mgd and requires additional treated wastewater from OC San. This additional water comes from OC San's Treatment Plant 2, which is in the City of Huntington Beach approximately 3.5 miles south of the GWRS. The Final Expansion project included expanding the existing GWRS treatment facilities, constructing new conveyance facilities at OC San Plant 2 and rehabilitating an existing pipeline between OC San Plant 2 and the GWRS. Following completion, the GWRS plant now recycles 100 percent of OC San's reclaimable sources and produces enough water to meet the needs of over one million people.

6.6.2 Wastewater

Mesa Water does not own a wastewater collection system. CMSD formed in 1944 under the Sanitary District Act of 1923, provides wastewater collection within Mesa Water's service area. CMSD boundaries encompass all of the City of Costa Mesa and portions of Newport Beach and unincorporated Orange County. CMSD provides wastewater collection services to 25,000 parcels via 325-miles of sewer line. The wastewater collected is conveyed to OC San facilities for treatment and disposal. Table 6.10 shows the volume of wastewater collection from Mesa Water's service area.

Table 6.10 Submittal Table 6-2 Retail: Wastewater Collected within Mesa Water's Service Area in 2025

Submittal Table 6-2 Retail: Wastewater Collected Within Service Area in 2025 Water Code Section 10633(a)				
Wastewater Collection			Recipient of Collected Wastewater	
Name of Wastewater Collection Agency	Wastewater Volume Metered or Estimated? OPTIONAL	Volume of Wastewater Collected from UWMP Service Area 2025	Name of Wastewater Treatment Plant (WWTP) and Place ID Number	Is WWTP Located Within UWMP Area?
		(AF)		
Costa Mesa Sanitary District (CMSD)	Estimated	9,248	OCSD Plant 1, Place ID 758392	No
City of Orange	Estimated	X	OCSD Plant 2, Place ID 259158	No
Total Wastewater Received from UWMP Service Area in 2025:		9,248		
NOTES: Based on a return rate of 56% (based on 2013 return rate study).				

6.6.3 Current Recycled Water Uses

Mesa Water currently uses recycled water from OCWD's GAP for direct non-potable reuse such as landscape irrigation. Currently, Mesa Water has 43 recycled water service connections. Some of the recycled water customers include the City of Costa Mesa, the County of Orange, Cal Trans, Costa Mesa Country Club, Orange Coast Community College, and several shopping and business centers. In FY 2024-25, 847 AF of recycled water from OCWD's GAP was used in Mesa Water's service area for landscape irrigation. Recycled water use accounts for approximately 6 percent of annual demand.

For indirect use, Mesa Water also benefits from OCWD's GWRS system that provides IPR through replenishment of OC Basin with water that meets state and federal drinking water standards.

6.6.4 Projected Recycled Water Uses

As of April 2019, the State of California amended its recycled water policy to expand its numeric goal of recycled water use to 2.5 million AFY by 2030 and added annual required reporting requirements for wastewater and recycled water. Mesa Water will continue to receive recycled water from GAP and supply it to the various landscape irrigation sites. Mesa Water will continue to supply wastewater to support the region's IPR via GWRS. Current and projected recycled water use through 2050 are shown in Table 6.11, and the 2020 projected 2025 recycled water use compared to the 2020 actual use is shown in Table 6.12. Tertiary recycled water usage is limited to landscape irrigation.

Table 6.11 Submittal Table 6-4 Retail: Recycled Water Direct Beneficial Uses Within Service Area

Submittal Table 6-4 Retail: Recycled Water Direct Beneficial Uses Within Service Area Water Code Section 10633 (c)(e)

Total	1,100	847
NOTES: Source – Mesa Water District		

6.6.5 Potential Recycled Water Uses

Mesa Water supports the continued development of recycled water through consumption of OCWD's GWRS produced water and recharge to the Basin. Currently, direct irrigation type recycled water use is expected to remain at 1,100 AFY through the 25-year period, with landscape irrigation as its sole use with no plans to expand this program as it is not overall beneficial to the Basin Pumpers like the GWRS IPR provides.

6.6.6 Optimization Plan

Studies of water recycling opportunities within Southern California provide a context for promoting the development of water recycling plans. It is recognized that broad public acceptance of recycled water requires continued education and public involvement. Currently, most of the recycled water available being directed toward replenishment of the groundwater basin and improvements in groundwater quality. As a user of groundwater, Mesa Water supports the efforts of OCWD and OC San to use recycled water as a primary resource for groundwater recharge in Orange County.

6.6.6.1 Public Education

Mesa Water participates in the MWDOC public education and school education programs, which include extensive sections on water recycling. MWDOC's water use efficiency public information programs are a partnership with agencies throughout the county. Through a variety of public information programs, MWDOC reaches the public, including those in Mesa Water, with information regarding present and future water supplies, the demands for a suitable quantity and quality of water, including recycled water, and the importance of implementing water efficiency techniques and behaviors. Through MWDOC, water education programs have reached thousands of students in Mesa Water with grade-specific programs that include information on recycled water.

6.6.6.2 Financial Incentives

The implementation of recycled water projects involves a substantial upfront capital investment for planning studies, EIRs, engineering design and construction before recycled water is available to the market. The establishment of new supplemental funding sources through federal, state and regional programs now provides significant financial incentives for water agencies to develop and make use of recycled water locally. Potential sources of funding include federal, state and local funding opportunities. These funding sources include the USBR, California Proposition 13 Water Bond, Proposition 84 and MET Local Resources Program (LRP). These funding opportunities may be sought by Mesa Water or possibly more appropriately by regional agencies. Mesa Water will continue to support seeking funding for regional water recycling projects and programs.

6.6.6.3 Optimization Plan

Mesa Water does not produce recycled water, therefore, there is no need for a recycled water optimization plan. In other areas of Orange County, recycled water is used for irrigating golf courses, parks, schools, businesses, and communal landscaping, as well as for groundwater recharge. Analyses have indicated that present worth costs to incorporate recycled water within Mesa Water are not cost effective as compared to purchasing imported water from MWDOC or using groundwater. Mesa Water will continue to conduct feasibility studies for recycled water and seek out creative solutions such as funding, regulatory requirements, institutional arrangement, and public acceptance for recycled water use with MWDOC, OCWD, MET, and other cooperative agencies.

6.7 Desalination Opportunities

6.7.1 Ocean Water Desalination

There are currently no ocean water desalination opportunities within Mesa Water's service area.

6.7.2 Groundwater Desalination

Per Mesa Water's 2025 CIP Update TM2, a local brackish groundwater desalination supply improvement project is currently being evaluated. It is a joint project with OCWD and the cities of Huntington Beach and Newport Beach. Mesa Water's initial share would be 1,000 AFY with earliest project completion around 2035-2040.

6.8 Water Exchanges and Transfers

6.8.1 Existing Exchanges and Transfers

Interconnections with other agencies result in the ability to share water supplies during short-term emergency situations or planned shutdowns of major water systems. Transfers of water can help with short-term outages but can also be involved with longer-term water exchanges to deal with droughts or long-term emergency situations. MWDOC helps its retail agencies develop both local and regional transfer and exchange opportunities that promote reliability within their systems.

Mesa Water maintains two metered interconnections with the City of Huntington Beach and the Irvine Ranch Water District (IRWD) and 15 emergency interconnections with the City of Santa Ana, City of Newport Beach, and IRWD.

6.8.2 Planned and Potential Exchanges and Transfers

Currently Mesa Water has no formal transfer or exchange plan. Opportunities are being explored that may develop into potential transfers or exchanges. This may include the selling of excess pumped water from the expansion of the MWRF.

MWDOC supports its retail agencies, such as Mesa Water, in developing both local and regional transfer and exchange opportunities that promote reliability within their systems. Examples of these future projects include:

Santa Ana River Conservation and Conjunctive Use Project – SARCCUP is a joint project established by five regional water agencies within the Santa Ana River Watershed (Eastern Municipal Water District, Inland Empire Utilities Agency, Western Municipal Water District, Orange County Water District, and San Bernardino Valley Municipal Water District). In September 2021, the participating agencies, in coordination with MET, executed a regional agreement framework establishing SARCCUP as a watershed-scale groundwater banking program to improve drought reliability across Orange, Riverside, and San Bernardino counties.

In 2016, SARCCUP received \$55 million in Proposition 84 funding from DWR; however, implementation has since advanced with the 2021 agreements and subsequent program updates. The overall SARCCUP program consists of three main elements: (1) Watershed-Scale Cooperative Water Banking Program; (2) Water Use Efficiency—landscape design/irrigation improvements and water budget assistance; and (3) Habitat creation and *Arundo donax* removal within the Santa Ana River.

The Watershed-Scale Cooperative Water Banking Program is the largest component of SARCCUP. Under MET's arrangement with San Bernardino Valley Municipal Water District (Valley), when Valley declares surplus SWP water and offers it to MET, MET offers at least 50 percent of an equivalent amount to SARCCUP member agencies for storage and later use in the Santa Ana River watershed, consistent with MET policy. This structure formalizes the purchase and storage pathway that had been under development and aligns with MET's extraordinary supply policy during allocations.

Program capacity planning identifies up to approximately 137,000 AF of storage across six basins, including up to 36,000 AF in the Orange County Groundwater Basin for use in dry years. Stored SARCCUP supplies may be designated "extraordinary supplies" during a MET allocation if managed consistent with MET's Water Supply Allocation Plan, thereby enhancing participating agencies' drought reliability.

Within Orange County, extraordinary supply assignment agreements among MET, MWDOC/OCWD, and certain retail agencies (e.g., Anaheim, Fullerton, Santa Ana) document how SARCCUP extraordinary supply is assigned and delivered locally. Program implementation and participation details continue to be refined among OCWD, retail agencies, and MWDOC.

6.9 Future Water Projects

Mesa Water continually reviews practices that will provide its customers with adequate and reliable supplies. Trained staff continue to ensure the water quality is safe and the water supply will meet present and future needs in an environmentally and economically responsible manner. Although Mesa Water has various projects planned to maintain and improve the water system, only projects that have both a concrete timeline and a quantifiable increase in supply are listed in Table 6.13. The descriptions of each project are taken from Mesa Water's 2025 CIP Update TM2.

Replacement of Clear Groundwater Well 5 – Although active, Well 5 currently produces sand when run at more than 2,200 gpm, while it used to operate at 3,800 gpm (2011 WMP) and 2,800 gpm (2013 step-down test). Moreover, despite efforts to swage the casing, the remaining service life of Well 5 was estimated at 3-5 years in 2018. Hence, replacement of this well is a logical investment that would likely result in additional clearwell production capacity. Based on historical pumping capacity and location in the Basin, it is assumed that a Well 5 replacement could produce approximately 2,800 gpm or 4.0 mgd. Hence, replacing Well 5 could result in an additional maximum day demand capacity of 600 gpm or 0.9 mgd (970 AFY if operated year-round). To estimate the annual yield of this project, a BPP of 85 percent was used, which was calculated to equate to an average operation of 60 percent when the replacement of Well 5 would increase the clearwell production capacity from 17,200 AFY to 17,800 AFY. Hence, the annual average additional production capacity of the replacement of Well 5 is estimated at approximately 580 AFY.

Brackish Groundwater Desalination (Local Supply Improvement Project) - In response to the need to increase local supply resilience, Mesa Water, in partnership with OCWD and the cities of Huntington Beach and Newport Beach, is leading efforts to evaluate the feasibility of a brackish groundwater Local Supply Improvement Project. The Local Supply Improvement Project feasibility study will investigate the benefits of brackish water desalination along the coast to increase local supplies for the agencies that pump water from the aquifer.

According to the funding proposal submitted for the Local Supply Improvement Project, the study will evaluate alternative groundwater well locations in areas of the Basin impacted by brackish groundwater and potentially protect existing production wells that may be susceptible to seawater intrusion. The study also will identify locations for the construction of a brackish groundwater desalination facility.

With the project facility having an expected initial capacity of 5 to 8 mgd, the total yield of this project could range from 5,600 to 9,000 AFY, respectively. For planning purposes, it was estimated that Mesa Water's share in this project could yield 1,000 AFY or 0.9 mgd. It is anticipated that implementation will take at least another 10-15 years; hence, the earliest completion year would be around 2035-2040. Due to the brackish nature of the source water, the potable water produced by the Local Supply Improvement Project is expected to be the most expensive water source in Mesa Water's portfolio.

Local Supply Improvement Project Expansion - Another option would be to increase the allocation Mesa Water would receive from the Local Supply Improvement Project described above. Assuming an

equal share with the other two partners (cities of Huntington Beach and Newport Beach) in the ultimate planned capacity 9,000 AFY, would equate to an annual yield for Mesa Water of 3,000 AFY. Hence, the expanded share at the maximum planned capacity would result in an additional yield of 2,000 AFY.

Table 6.13 Submittal Table 6-7 Retail: Expected Future Water Supply Projects or Programs

Submittal Table 6-7 Retail: Expected Future Water Supply Projects or Programs Water Code Section 10631 (f)				
Name of Future Projects or Programs	Joint Project with other suppliers?		Planned Implementation Year	Expected Increase in Water Supply to Supplier
	(yes/no)	If Yes, Supplier Name		(AFY)
Replacement of Clear Groundwater Well 5	No	N/A		580
Brackish Groundwater Desalination (Local Supply Improvement Project)	Yes	Orange County Water District and the Cities of Huntington Beach and Newport Beach	2035-2040	1,000
Increase in Local Supply Improvement Project Capacity	Yes	City of Huntington Beach and City of Newport Beach		2,000
NOTES: The additional annual yield of clearwell 5 considers a BPP of 85 percent. All values are rounded to nearest 10 AFY.				

6.10 Energy Intensity

Mesa Water owns and operates a water distribution system. This section reports the energy intensity for each system using data from FY 2025. Water and energy resources are inextricably connected. Known as the "water-energy nexus", the California Energy Commission estimates the transport and treatment of water, treatment and disposal of wastewater, and the energy used to heat and consume water account for nearly 20 percent of the total electricity and 30 percent of non-power plant related natural gas consumed in California. In 2015, California issued new rules requiring 50 percent of its power to come from renewables, along with a reduction in greenhouse gas (GHG) emissions to 40 percent below 1990 levels by 2030. Consistent with energy and water conservation, renewable energy production, and GHG mitigation initiatives, Mesa Water reports the energy intensity of its water and wastewater operations.

The methodology for calculating water energy intensity outlined in Appendix O of the UWMP Guidebook was adapted from the California Institute for Energy Efficiency exploratory research study titled "Methodology for Analysis of the Energy Intensity of California's Water Systems" (Wilkinson 2000).

The study defines water energy intensity as the total amount of energy, calculated on a whole-system basis, required for the use of a given amount of water in a specific location. UWMP reporting is limited to available energy intensity information associated with water processes occurring within an urban water supplier's direct operational control. Operational control is defined as authority over normal business operations at the operational level. Any energy embedded in water supplies imparted by an upstream water supplier (e.g., water wholesaler) or consequently by a downstream water purveyor (e.g., retail water provider) is not included in the UWMP energy intensity tables. Mesa Water's calculations conform to methodologies outlined in the UWMP Guidebook and Wilkinson study.

6.10.1 Water Supply Energy Intensity

In FY 2025, Mesa Water consumed 3421.1 kilowatt-hours (kWh) per million gallons (MG) for water extraction, treatment, and distribution services (Table 6.14). It is important to note that many of the retail agencies in Orange County do not have water treatment and therefore, Mesa Water's energy intensity cannot be directly compared with these agencies. The basis for calculations is provided in more detail in the following subsections.

Table 6.14 Optional Submittal Table O-1A: Energy Efficiency

Optional Submittal Table O-1A: Recommended Energy Reporting - SINGLE DELIVERY PRODUCT - WATER SUPPLY PROCESS APPROACH										
Water Delivery Product	Retail Potable Deliveries	Only for Water Delivery Products Under the Urban Water Supplier's Operational Control								
Start Date of Reporting Period	7/1/2024	Water Management Process							Non-Consequential Hydropower	
End Date of Reporting Period	6/30/2025									
Is upstream embedded energy included in the values reported?	No									
		Units for Water Volume	Extract and Divert	Place into Storage	Conveyance	Treatment	Distribution	Total Utility	Hydropower	Net Utility
Volume of Water Entering Process		AF	15,624			3,123	14,875	14,875		14,875
Energy Consumed (kWh)		N/A	13,435,338			640,247	2,506,937	16,582,522		16,582,522
Energy Intensity (kWh/vol. converted to MG)		N/A	2,639	0.0	0.0	629	517	3,421	0.0	3,421
Quantity of Self-Generated Renewable Energy										
0		kWh								
Data Quality (Estimate, Metered Data, Combination of Estimates and Metered Data)										
Combination of Estimates and Metered Data										
Data Quality Narrative:										
Volume of Water Entering Process: Extraction data based on MWDOC Compiled Water Audits “Volume From Own Sources” and Distribution data based on MWDOC Compiled Water Audits “Authorized Consumption.” Non-Revenue Water is not considered in this calculation – the energy efficiency is based on water delivered to customers.										
Energy Consumed: Based on metered data.										
Narrative:										
Mesa Water relies on local groundwater, and recycled water to meet its customers' water needs. Operational control is limited to groundwater wells, a treatment facility, and potable water booster stations.										

6.10.1.1 Operational Control and Reporting Period

As described throughout the report, Mesa Water is a retail agency that relies on groundwater and has the ability to purchase and receive imported water. Water supply energy intensity was calculated for the 2025 financial year. Calendar Year data is used more frequently for energy intensity calculations to provide consistency in the time frame among various organizations, but financial year data was used given the completeness of what was available.

6.10.1.2 Volume of Water Entering Processes

According to Mesa Water District water production meters, Mesa Water extracted 15,624 AF of groundwater from the OC Basin. Approximately 3,123 AF of water was treated at the MWRF. According to MWDOC water audits, Mesa Water distributed 14,875 AF of water to customers which was primarily groundwater extracted by Mesa Water.

6.10.1.3 Energy Consumption and Generation

According to Southern California Edison Electricity Bills and SoCal Gas bills, groundwater wells consumed 13,435,338 kWh equivalent of electricity with one well running on gas, treatment facilities consumed 640,247 kWh of electricity, and pump stations along the distribution system consumed 2,506,937 kWh equivalent of electricity with two pump stations running on gas. Currently, Mesa Water does not generate renewable energy. Energy consumption is based on metered data.

6.10.2 Wastewater and Recycled Water Energy Intensity

Mesa Water does not have energy data for the wastewater system readily available and has therefore chosen not to calculate an energy intensity for the wastewater system.

6.10.3 Key Findings and Next Steps

Calculating and disclosing direct operationally controlled energy intensities is another step towards understanding the water-energy nexus. However, much work is still needed to better understand upstream and downstream (indirect) water-energy impacts. When assessing water supply energy intensities or comparing intensities between providers, it is important to consider reporting boundaries as they do not convey the upstream embedded energy or impacts energy intensity has on downstream users. Engaging one's upstream and downstream supply chain can guide more informed decisions that holistically benefit the environment and are mutually beneficial to engaged parties. Suggestions for further study include:

- Supply-chain engagement – Mesa Water relies on a variety of water sources for their customers. While some studies have used life cycle assessment tools to estimate energy intensities, there is a need to confirm this data. The 2025 UWMP requirement for all agencies to calculate energy intensity will help Mesa Water and neighboring agencies make more informed decisions that would benefit the region as a whole regarding the energy and water nexus. A similar analysis could be performed with upstream supply chain energy, for example, with SWP.
- Internal benchmarking and goal setting – With a focus on energy conservation and a projected increase in water demand despite energy conservation efforts, Mesa Water's energy intensities will

likely decrease with time. Conceivably, in a case where water demand decreases, energy intensities may rise as the energy required to pump or treat is not always proportional to water delivered. In the course of exploring the water-energy nexus and pursuing renewable energy goals, there is a need to assess whether energy intensity is a meaningful indicator or if it makes sense to use a different indicator to reflect Mesa Water's commitment to energy and water conservation. Current efforts could be expanded with the addition of a wastewater energy intensity evaluation.

- Regional sustainability – Water and energy efficiency are two components of a sustainable future. Efforts to conserve water and energy, however, may impact the social, environmental, and economic livelihood of the region. In addition to the relationship between water and energy, over time, it may also be important to consider and assess the connection these resources have on other aspects of a sustainable future.

CHAPTER 7 WATER SERVICE RELIABILITY AND DROUGHT RISK ASSESSMENT

This chapter of the Urban Water Management Plan (UWMP) describes Mesa Water District’s water service reliability assessment for three long-term hydrological conditions: a normal year, a single dry year, and a drought period lasting five consecutive years. The Drought Risk Assessment (DRA) assesses water supply reliability during a severe drought lasting the next five consecutive years, from 2026 to 2030. Factors affecting reliability, such water quality, regulations and climate change, are also summarized in this assessment of reliability.

7.1 Water Service Reliability Overview

Every urban water supplier is required to assess the reliability of their water service to its customers under a normal year, a single dry year, and multiple dry years. Mesa Water District’s water sources are primarily from local groundwater and recycled water. Mesa Water can import water purchased from the Municipal Water District of Orange County (MWDOC), however is able to meet all of its potable water demands from local sources. MWDOC is one of 26 member agencies of the Metropolitan Water District of Southern California (MET), which imports water from the Colorado River through its own Colorado River Aqueduct (CRA) and from Northern California through the California Aqueduct managed by the State Water Project (SWP).

Local groundwater in the Orange County Basin is managed by the Orange County Water District (OCWD). As summarized in Chapter 6, OCWD has developed programs and projects to improve groundwater recharge and augment groundwater through recycled water, conjunctive use and water transfers. OCWD assesses groundwater conditions and sets its Basin Production Percentage (BPP), which determines how much water will be pumped from the basin year, and the Basin Equity Assessment (BEA), which is a surcharge for exceeding the BPP. Currently, the BPP is set at 85 percent. Likewise MET has also invested in numerous programs and projects to augment its direct deliveries of imported water such as water transfers, groundwater banking, and use of its reservoir storage as summarized in Chapter 6. MET’s draft 2025 UWMP demonstrates that MET will be able to meet its projected water demands for the next 25 years under normal, dry and multiple dry year conditions (MET, 2025).

Table 7.1 shows the basis of water year data used to predict drought supply availability. In 2025, MWDOC developed a water demand forecast model for its participating water agencies that statistically correlates municipal and industrial (M&I) water use with demographic, socioeconomic, conservation and weather variables—as reported in the 2025 Orange County Water Demand Projection Model TM (MWDOC, 2025). Because the model isolates weather, future water demand projects can be estimated under single and multiple-year droughts and under future climate change scenarios. The model shows the average (normal) hydrologic condition for the MWDOC service area is represented by Fiscal Years (FY) 1991-2024 and the single-dry year hydrologic condition by FY 2013-14. The five consecutive years of FYs 1991-2024 represent the driest five consecutive year historical sequence for MWDOC’s service area. Locally, Orange County rainfall for the five-year period totaled 36 inches, the driest on record.

Table 7.1 Optional Submittal Table 7-1 Retail: Basis of Water Year Data (Reliability Assessment)

OPTIONAL Submittal Table 7-1 Retail: Basis of Water Year Data (Reliability Assessment)			
Year Type	Base Year If not using a calendar year, type in the last year of the fiscal, water year, or range of years, for example, water year 2024-2025, use 2025	Available Supplies if Year Type Repeats	
		☐	Check the box if quantification of available supplies is not compatible with this table and is provided elsewhere in the UWMP. Location: [insert location from UWMP]
		Quantification of available supplies is provided in this table as either volume only, percent only, or both.	
		Volume Available	% of Average Supply
Average Year	1991-2024		100%
Single-Dry Year	2014		107%
Consecutive Dry Years 1st Year	1991-2024*		107%
Consecutive Dry Years 2nd Year	1991-2024*		112%
Consecutive Dry Years 3rd Year	1991-2024*		113%
Consecutive Dry Years 4th Year	1991-2024*		115%
Consecutive Dry Years 5th Year	1991-2024*		117%
NOTES: A regression model was developed to estimate water demand under multiple dry year conditions (i.e., prolonged dry conditions without conservation measures), using a 33-year dataset (1991-2024) that excluded drought years to reflect unconstrained demand. Correlation coefficients between demand, temperature, and precipitation were applied to the hottest and driest historical sequences to calculate high-demand scenarios, which were expressed as scaling factors relative to the 33-year average demand.			

7.2 Factors Affecting Water Supply Reliability

To prepare realistic water supply reliability assessments, various factors affecting reliability were considered. These include climate change and environmental requirements, regulatory changes, water quality impacts, and locally applicable criteria.

7.2.1 Climate Change and the Environment

Changing climate patterns are expected to shift precipitation patterns and affect water supply availability. Unpredictable weather patterns will make water supply planning more challenging. Although climate change impacts are associated with exact timing, magnitude, and regional impacts of these temperature and precipitation changes, researchers have identified several areas of concern for California water planners (CAMP4W, 2025). These areas include:

- A reduction in Sierra Nevada Mountain snowpack.
- Extreme heat threatens both infrastructure and the health and safety of human lives.
- Prolonged drought periods.
- Water quality issues associated with increase in wildfires.

- Rising sea levels resulting in:
 - » Impacts to coastal groundwater basins due to seawater intrusion.
 - » Increased risk of damage from storms, high-tide events, and the erosion of levees.
 - » Potential pumping cutbacks to the SWP and Central Valley Project (CVP).

Other important issues of concern due to global climate change include:

- Effects on local supplies such as groundwater.
- Changes in urban and agricultural demand levels and patterns.
- Alterations to power generation and pumping regime.
- Increases in ocean algal blooms affected seawater desalination supplies.

The major impact in California is that without additional surface storage, winter snowpack retaining water storage in the mountains will not last resulting in more water being lost to the oceans.

In addition, the Colorado River Basin supplies have been inconsistent since about the year 2000, with precipitation near normal while runoff has been less than average in two out of every three years. Climate models are predicting a continuation of this pattern whereby hotter and drier weather conditions will result in continuing lower runoff, pushing the system toward a drying trend that is often characterized as long-term drought.

Dramatic swings in annual hydrologic conditions have affected water supplies available from the SWP over the last decade. The declining ecosystem in the Delta has also led to a reduction in water supply deliveries, and operational constraints will likely continue until a long-term solution to these problems is identified and implemented (MET, 2025).

7.2.2 Regulatory and Legal

Ongoing regulatory restrictions, such as those imposed by the Biological Opinions (BiOps) on the effects of SWP and the federal CVP operations on certain marine life, also contribute to the challenge of determining water delivery reliability. Endangered species protection and conveyance needs in the Delta have resulted in operational constraints that are particularly important because pumping restrictions impact many water resources programs – SWP supplies and additional voluntary transfers, Central Valley storage and transfers, and in-region groundwater and surface water storage. BiOps protect special-status species listed as threatened or endangered under the Endangered Species Act (ESA) and imposed substantial constraints on Delta water supply operations through requirements for Delta inflow and outflow and export pumping restrictions.

In addition, the State Water Resources Control Board (SWRCB) has set water quality objectives that must be met by the SWP including minimum Delta outflows, limits on SWP and CVP Delta exports, and maximum allowable salinity level. SWRCB has implemented the new Lower San Joaquin River flow objectives from the Phase 1 Delta Plan amendments through adjudicatory (water rights) and regulatory (water quality) processes. The Lower San Joaquin River flow objectives are estimated to reduce water available for human consumptive use. New litigation, listings of additional species under the ESA, or regulatory requirements imposed by the SWRCB could further adversely affect SWP operations in the future by requiring additional export reductions, releases of additional water from storage, or other operational changes impacting water supply operations.

The difficulty and implications of environmental review, documentation, and permitting pose challenges for multi-year transfer agreements, recycled water projects, and seawater desalination plants. The timeline and roadmap for getting a permit for recycled water projects are challenging and inconsistently implemented in different regions of the state. Indirect potable reuse projects face regulatory restraints such as treatment, blend water, retention time, and Basin Plan Objectives, which may limit how much recycled water can feasibly be recharged into the groundwater basins. New regulations and permitting uncertainty are also barriers to seawater desalination supplies, including updated Ocean Plan Regulations, Marine Life Protected Areas, and Once-Through Cooling Regulations (MET, 2025).

7.2.3 Water Quality

The following sub-section describes the water quality of the region's water supplies and the measures being taken to continue to deliver high-quality drinking water that meets federal and state regulations.

7.2.3.1 Imported Water

MET is responsible for providing high quality potable water throughout its service area. Over 250,000 water quality tests are performed per year on MET's water to test for regulated contaminants and additional contaminants of concern to monitor the safety of its waters (MET, 2025). MET's supplies originate primarily from the CRA and from the SWP. A blend of these two sources, proportional to each year's availability of the source, is then delivered throughout MET's service area.

Although the CRA and SWP have different water quality characteristics, MET has implemented effective treatment and management strategies to maintain high-quality water. The CRA water source contains higher total dissolved solids (TDS) and the SWP contains higher levels of naturally-occurring organic matter, lending to the formation of disinfection byproducts. To remediate the CRA's high level of salinity and the SWP's high level of organic matter, MET blends CRA and SWP supplies and has upgraded all its treatment facilities to include ozone treatment processes. In addition, MET has been engaged in efforts to protect its Colorado River supplies from threats of uranium, perchlorate, and chromium VI while also investigating the potential water quality impact of the following emerging contaminants: N-nitrosodimethylamine, pharmaceuticals and personal care products, microplastics, per- and polyfluoroalkyl substances (PFAS), and 1,4-dioxane (MET, 2025).

PFAS is a group of widely used man-made "forever chemicals" that include both PFOA (perfluorooctanoic acid) and PFOS (perfluorooctane sulfonate). MET has voluntarily monitored PFAS in its source and treated waters since 2017. Most samples have shown non-detect (ND) for all tested PFAS, including PFOA and PFOS. A limited number of other PFAS—such as PFHxA, PFBA, PFPeA, PFDoA, PFTA, and PFBS, have been detected only at trace levels below their method detection limits. PFOA and PFOS have not been detected in Metropolitan's imported or treated water supplies. Some member agencies, however, have detected these compounds in local groundwater wells, which may require treatment or source management to comply with emerging Division of Drinking Water (DDW) regulations. As DDW and The U.S. Environmental Protection Agency (EPA) establish enforceable maximum contaminant levels (MCL) for PFOA and PFOS, some agencies may supplement their local supplies with increased purchases of Metropolitan water (MET, 2025).

EPA finalized the first national drinking water standards for six PFAS compounds in April 2024. These standards include enforceable MCLs for PFOA and PFOS set at 4 parts per trillion (ppt). In May 2025 the

EPA announced that it would extend the compliance deadline for PFOA and PFOS from 2029 to 2031 to provide additional time for testing, planning, and installation of treatment technologies. While MET and its member agencies continue to monitor and test PFAS in imported and local sources, the delay in the federal compliance date allows additional time to evaluate treatment options, coordinate funding, and plan system upgrades necessary to meet forthcoming federal PFAS standards.

The presence of quagga mussels in water sources is a water quality concern. Quagga mussels are an invasive species that was first discovered in 2007 at Lake Mead, on the Colorado River. This species of mussels forms massive colonies in short periods of time, disrupting ecosystems and blocking water intakes. They can cause significant disruption and damage to water distribution systems. MET has had success in controlling the spread and impacts of the quagga mussels within the CRA; however, the future could require more extensive maintenance and reduced operational flexibility than current operations allow. It also resulted in MET eliminating deliveries of CRA water into Diamond Valley Lake (DVL) to keep the reservoir free from quagga mussels (MET, 2025).

In addition, Golden Mussels, another invasive species capable of disrupting pipelines and altering ecosystems, were detected in the Sacramento–San Joaquin Delta in October 2024 and are now spreading through the SWP. These mussels pose similar concerns due to their ability to obstruct raw water conveyance facilities and negatively affect aquatic environments. Although their presence does not typically result in violations of drinking water standards, unmanaged infestations can degrade habitats, clog infrastructure, and reduce the aesthetic and recreational value of lakes and reservoirs. State and regional agencies continue to monitor golden mussel movement and evaluate appropriate response strategies to limit their spread (MET, 2025).

7.2.3.2 Groundwater

Groundwater is a reliable component of the water supply for Orange County, and the OCWD manages the basin to ensure its long-term quality and sustainability. The basin supports a significant portion of the region's water demands and is monitored through an extensive network of production, monitoring, and recharge wells that provide data on water levels and water quality conditions across the aquifer system

Orange County Groundwater Basin

OCWD is responsible for managing the Orange County (OC) Groundwater Basin. To maintain groundwater quality, OCWD conducts an extensive monitoring program that serves to manage the OC Basin's groundwater production, control groundwater contamination, and comply with all required laws and regulations. A network of nearly 700 groundwater wells provides OCWD a source for samples, which are tested for a variety of purposes. OCWD collects samples each month to monitor Basin water quality. The total number of water samples analyzed varies year-to-year due to regulatory requirements, conditions in the basin, and applied research and/or special study demands. These samples are collected and tested according to approved federal and state procedures as well as industry-recognized quality assurance and control protocols (City of La Habra et al., 2017). OCWD routinely tests for hundreds of regulated constituents, but the parameters discussed, PFAS, TDS, and nitrate, are of focus because they represent the most relevant regional and regulatory considerations that influence groundwater management and long-term supply planning. These issues do not indicate that the groundwater basin is unsafe; rather, they are discussed because they are key focus areas for state agencies and water suppliers throughout Southern California. These issues do not indicate that the groundwater basin is unsafe; rather, they are

discussed because they are key focus areas for state agencies and water suppliers throughout Southern California.

PFAS are of particular concern for groundwater quality, and since the summer of 2019, DDW requires testing for PFAS compounds in some groundwater production wells in the OCWD area. According to the California State Water Resources Control Board, the federal MCL for PFAS is 4 nanograms per liter (ng/L) (ppt) (California State Water Resources Control Board, 2024).

By 2025 OCWD had restored 49 wells to service with operational treatment systems, with an additional 57 wells in planning, design, or construction stages (ACWA, 2025). These systems continue to rely primarily on granular activated carbon and ion-exchange media operated in lead-lag configuration to achieve non-detect PFAS levels consistent with evolving state and federal regulatory standards (Santa Ana Regional Water Quality Control Board & Orange County Water District, 2023).

Groundwater production in FY 2023–24 totaled 280,420 AF, with slight increases projected over the next two years as additional treatment systems come online, showing continued reductions associated with PFAS-impacted wells that remain offline across several agencies. Salinity is a significant water quality problem in many parts of southern California, including Orange County. Salinity is a measure of the dissolved minerals in water including both TDS and nitrates. OCWD continuously monitors the levels of TDS in wells throughout the Orange County (OC) Basin. TDS currently has a California Secondary MCL of 500 milligrams per liter (mg/L). The portions of the OC Basin with the highest levels are generally located in the cities of Irvine, Tustin, Yorba Linda, Anaheim, and Fullerton. There is also a broad area in the central portion of the OC Basin where TDS ranges from 500 to 700 mg/L. Sources of TDS include the water supplies used to recharge the OC Basin and from onsite wastewater treatment systems, also known as septic systems. The TDS concentration in the OC Basin increased on average from 415 mg/L in 2022-23 to 432 mg/L in 2023-24 (OCWD, 2025).

Nitrates are one of the most common and widespread contaminants in groundwater supplies, originating from fertilizer use, animal feedlots, wastewater disposal systems, and other sources. The MCL for nitrate in drinking water is set at 10 mg/L. OCWD regularly monitors nitrate levels in groundwater and works with producers to treat wells that have exceeded safe levels of nitrate concentrations. OCWD manages the nitrate concentration of water recharged by its facilities to reduce nitrate concentrations in groundwater. This includes the operation of the Prado Wetlands, which was designed to remove nitrogen and other pollutants from the Santa Ana River before the water is diverted to be percolated into OCWD's surface water recharge system. Although water from the deep aquifer system is of very high quality, it is amber-colored and contains a sulfuric odor due to buried natural organic material, requiring treatment before use as drinking water. The principal aquifer, which supplies most basin pumping, occurs at depths of roughly 300-1,200 feet below ground surface (OCWD, 2025). The total volume of amber-colored groundwater in the deep system is estimated at approximately 1 MAF.

7.2.4 Locally Applicable Criteria

Within Mesa Water, some infrastructure investments, such as the upgrades of Reservoirs 1 and 2 directly affect reliability. The Reservoir Upgrades Project will allow Mesa Water to help manage peak water demands by storing up to an additional 11 million gallons of water at two reservoirs (Mesa Water District, 2024). The project will replace pumps, generators and motors, add new infrastructure to pumping

systems and make upgrades to the reservoir management system. Both Reservoirs upgrades began in 2024 and are still in progress.

Over the years, the water agencies in Orange County have made tremendous efforts to integrate their systems to provide flexibility for interchanging with different sources of supply. There are emergency agreements in place to ensure all parts of the County have an adequate supply of water. In the northern part of the County, agencies can meet most of their demands from groundwater with very little limitation, except for the OCWD BPP. For the agencies in south Orange County, most of their demands are met with imported water, and their limitations are based on the capacity of their systems, which are very robust. However, if a major earthquake on the San Andreas Fault occurs, it can potentially be damaging to key water aqueducts and disrupt imported supplies to the entire Southern California for up to six months. The MET region would likely require a water-use reduction of 10-25 percent until the system is repaired. However, MET has taken proactive steps to handle such disruption, such as constructing DVL, which mitigates potential impacts. DVL, along with other local reservoirs, can store a six to twelve-month supply of emergency water (MET, 2025).

7.3 Water Service Reliability Assessment

This section assesses the reliability of Mesa Water District’s water service to its customers. This is completed by comparing the projected long-term water demand (Chapter 4), to the projected water supply sources available to Mesa Water District (Chapter 6), in five-year increments, for a normal water year, a single dry water year, and a drought lasting five consecutive water years.

7.3.1 Normal Year Reliability

In 2025, MWDOC developed water demand forecast models for participating water agencies in Orange County, described in detail in Chapter 4. This 25-year demand forecast uses statistical models to account for demographic, socioeconomic, conservation, and weather variables (MWDOC, 2025). For normal year reliability, the demand forecast represents average weather conditions.

Mesa Water District is 100 percent reliable using locally pumped groundwater for normal year demands from 2025 through 2050. Mesa Water District can receive imported water from MWDOC, if needed to supplement locally pumped groundwater, via connection to MET's regional distribution system. Although pipeline and connection capacity rights do not guarantee the availability of water, they do guarantee the ability to convey water into the local system when it is available to the MET distribution system

A comparison between the supply and demand for projected years between 2025 and 2050 is shown in Table 7.2. The table demonstrates that projected supplies and demands are equal in every planning year, with no anticipated surpluses or shortfalls. As stated above, the available supply will meet projected demands due to a diversified supply and conservation measures limiting and reducing imported demands in the later years.

7.3.2 Single Dry Year Reliability

A single dry year is defined as a single year of minimal to no rainfall within a period where average precipitation is expected to occur. MWDOC's water demand projection model (described in Section 4.3.1), isolated the impacts that weather and future climate can have on water demand through the use of a statistical model. The impacts of hot/dry weather conditions are reflected as a percentage increase in water demands from the normal year condition (average of FY 2017-18 and FY 2018-19). For a single dry year condition (FY 2013-14), the model projects a seven percent increase in demand for Mesa Water District's service area (MWDOC, 2025). Detailed information of the model is included in Appendix H.

Mesa Water has documented that it is 100 percent reliable for single dry year demands from 2025 through 2050. As shown in Table 7.5, projected single dry year supplies and demands are equal from 2030 to 2050, resulting in no anticipated shortages. This assessment incorporates a seven percent increase in demand above normal-year levels and shows the significant reserves and conservation measures available within MET.

Table 7.5 Submittal Table 7-3 Retail: Single Dry Year Supply and Demand Comparison

Surplus/(shortfall)	0	0	0	0	0
OPTIONAL Planned WSCP Actions					
WSCP - supply augmentation benefit					
WSCP - use reduction savings benefit					
Revised Surplus/(shortfall)					
NOTES: It is conservatively assumed that a single dry year demand is 7% greater than each respective year's normally projected total water demand. Groundwater is sustainably managed through the BPP and robust management measures (Section 6.3.4 and Appendix E); surface water (Section 6.4) and contribution to indirect recycled water production (Section 6.6) provide additional local supply; and based on MET's and MWDOC's UWMPs, imported water is available to close any local water supply gap (Section 7.5.1).					

7.3.3 Multiple Dry Years Reliability

Multiple dry years are defined as five or more consecutive dry years with minimal rainfall within a period of average precipitation. MWDOC's water demand projection model (described in Section 4.3.1) isolated the impacts that weather and future climate can have on water demand through the use of a statistical model. The impacts of hot/dry weather conditions are reflected as a percentage increase in water demands from the normal year condition (average of FY 2017-18 and FY 2018-19). During multiple dry years, the UWMP applies dry-year adjustment factors to reflect future climate conditions and retail level water demand. These increase seven percent in single-dry and first multiple-dry year, going up to twelve, thirteen, fifteen, and seventeen percent in subsequent drought years, relative to average-year demand

(see Table 7.1) (MWDOC, 2025). It is conservatively assumed that a five-year multi dry year scenario is a repeat of the single dry year over five consecutive years.

Mesa Water District has demonstrated that its water supplies remain fully reliable throughout a five-consecutive-year dry period from 2025 through 2050. Even assuming a conservative demand increase of seven percent each year for five consecutive years, Mesa Water District is capable of meeting all customers' demands from 2025 through 2050 (Table 7.6), with significant reserves held by MET and conservation.

The table includes treated and untreated water from MET for M&I and non-M&I demands. The multiple dry-year projections estimate a seven percent increase on imported M&I demand. Non-M&I demand (Irvine Lake and groundwater storage and replenishment) remain constant at 55,617 AFY because these demands are not affected by changes in hydrological conditions. The 2030 column assesses supply and demand for FY 2025-26 through FY 2029-30; the 2035 column assesses FY 2030-31 through FY 2034-35 and so forth, to end the water service reliability assessment in FY 2045-50.

Table 7.6 Submittal Table 7-4 Retail: Multiple Dry Years Supply and Demand Comparison

Submittal Table 7-4 Retail: Multiple Dry Years Supply and Use Comparison Water Code Section 10635(a)						
		2030	2035	2040	2045	2050 (Opt)
		(AF)	(AF)	(AF)	(AF)	(AF)
First year	Supply totals	19,202	19,802	18,955	19,068	19,048
	Use totals	19,202	19,802	18,955	19,068	19,048
	Surplus/(shortfall)	0	0	0	0	0

	Use totals	20,907	21,561	20,638	20,762	20,739
	Surplus/(shortfall)	0	0	0	0	0
NOTES: It is conservatively assumed that a five consecutive dry year scenario is a repeat of the single dry year over five consecutive years. The 2030 column assesses supply and demand for FY 2025-26 through FY 2029-30; the 2035 column assesses FY 2030-31 through FY 2034-35 and so forth, in order to end the water service reliability assessment in FY 2049-50. Groundwater is sustainably managed through the BPP and robust management measures (Section 6.3.4 and Appendix I), direct and indirect recycled water uses provide additional local supply (Section 6.6), and based on MET's and MWDOC's UWMP, imported water is available to close any local water supply gap (Section 7.5.1)						

7.4 Management Tools and Options

Existing and planned water management tools and options that seek to maximize local resources are described below:

- **Reduced Delta Reliance:** Both MWDOC and MET have demonstrated consistency with Reduced Reliance on the Delta Through Improved Regional Water Self-Reliance (Delta Plan policy WR P1) by reporting the expected outcomes for measurable reductions in supplies from the Delta. MET has improved its self-reliance through methods including water use efficiency, water recycling, stormwater capture and reuse, advanced water technologies, conjunctive use projects, local and regional water supply and storage programs, and other programs and projects. Similarly, MWDOC and its member agencies have further invested in water use efficiency, local water supply projects, and advanced water technologies to increase regional self-reliance. In the near term (2030), regional self-reliance during a normal water year is projected to increase by approximately 601 TAF compared to the 2010 baseline, an improvement equal to nearly 20 percent of projected 2030 retail demands. Looking ahead to 2050, normal year regional self-reliance is expected to grow by more than 1.0 MAF above the 2010 baseline, representing an increase of roughly 20 percent of projected 2050 retail demands (MET, 2025).-reliance during a normal water year is projected to increase by approximately 601 TAF compared to the 2010 baseline-year regional self-reliance is expected to grow by more than 1.0 MAF above the 2010 baseline, representing an increase of roughly 20 percent of projected 2050 retail demands (MET, 2025).
- **The continued and planned use of groundwater:** The water supply resources within Mesa Water District's service area provided by the groundwater basins that account for 100% of local supplies available and are used as reservoirs to store water during wet years and draw from storage during dry years,. Groundwater basins are managed within a safe basin operating range so that groundwater wells are only pumped as needed to meet water use. Although Mesa Water District does not manage any of the service area's groundwater basins, Mesa Water District supports and partners in efforts to maintain the health of the local basins through local groundwater recharge efforts such OCWD's Groundwater Replenishment System (GWRS) program.
- **Groundwater storage and transfer programs:** Mesa Water District and OCWD's involvement in Santa Ana River Conservation and Conjunctive Use Program (SARCCUP) includes participation in a conjunctive use program that improves water supply resiliency and increases available dry-year yield from local groundwater basins. The groundwater bank has 137,000 AF of storage (Inland Empire Utilities Agency, 2021). MET has numerous groundwater storage and transfer programs in which MET endeavors to increase the reliability of water supplies, including the Antelope Valley-East Kern Water Agency (AVEK) Waster Agency Exchange and Storage Program and the High Desert Water Bank Program. The IRWD Strand Ranch Water Banking Program has approximately 23,000 AF stored for IRWD's benefit, and by agreement, the water is defined to be an "Extraordinary Supply" by MET and counts essentially 1:1 during a drought/water shortage condition under MET's and MWDOC's Water Savings Action Plan (WSAP). In addition, MET has encouraged storage through its cyclic and conjunctive use programs that allow MET to deliver water into a groundwater basin in advance of agency demands, such as the Cyclic Storage Agreements under the Main San Gabriel Basin Judgement.
- **Increased use of recycled water:** Mesa Water District partners with local agencies in recycled water efforts, including OCWD to identify opportunities for the use of recycled water for irrigation purposes,

groundwater recharge and some non-irrigation applications. OCWD's GWRS and Green Acres Project (GAP) allow southern California to decrease its dependency on imported water and create a local and reliable source of water that meet or exceed all federal and state drinking level standards. Expansion of the GWRS is currently underway to increase the plant's production to 130 MGD and further reduce reliance on imported water.

- **Implementation of demand management measures during dry periods:** During dry periods, water reduction methods to be applied to the public through the retail agencies, will in turn reduce Mesa Water District's overall demands. MWDOC assisted its retail agencies by leading the coordination of the 20 percent by 2020 Orange County Regional Alliance for all of the retail agencies in Orange County. MWDOC assisted each retail water supplier in Orange County in analyzing the requirements of and establishing their baseline and target water use, as guided by DWR.

7.5 Drought Risk Assessment (DRA)

California Water Code (CWC) Section 10635(b) requires every urban water supplier to include, as part of its UWMP, a DRA for its water service as part of information considered in developing its demand management measures and water supply projects and programs. The DRA is a specific planning action that assumes Mesa Water District is experiencing a drought over the next five years and addresses water supply reliability in the context of presumed drought conditions. Together, the water service reliability assessment, DRA, and Water Shortage Contingency Plan (WSCP) allow Mesa Water District to have a comprehensive picture of its short-term and long-term water service reliability and to identify the tools to address any perceived or actual shortage conditions.

CWC Section 10612 requires the DRA to be based on the driest five-year historical sequence for Mesa Water District's water supply. However, CWC Section 10635 also requires that the analysis consider plausible changes on projected supplies and demands due to climate change, anticipated regulatory changes, and other locally applicable criteria.

The following sections describe the methodology and results from Mesa Water District's DRA.

7.5.1 Methodology

As described in more detail in Section 4.3.1, the water demand forecasting model prepared for MWDOC and OCWD isolated the impacts that weather and future climate can have on water demand through the use of an econometric model. In addition to weather related factors, the model incorporates explanatory variables that influence both historical and projected water use, including water price, gross domestic product, median household income, housing density, persons per household, households per account, sectoral employment mix, seasonal patterns, historical conservation trends, drought restrictions, and Coronavirus Disease 2019 (COVID-19) behavioral effects. These variables allow the model to separately quantify how economic conditions, demographic shifts, land use characteristics, and institutional constraints affect demand across residential, commercial, industrial, institutional, and irrigation sectors (MWDOC, 2025).

The impacts of hot/dry weather condition are reflected as a percentage increase in water demands from the average condition (average of FY 2017-18 and FY 2018-19). For a single dry year condition (FY 2013-14), the model projects a seven percent increase in demand for Mesa Water District's service area (MWDOC, 2025).

For Mesa Water District, the five consecutive years of FY 2011-12 to FY 2015-16 represent the driest five consecutive year historical sequence for Mesa Water District's service area water supply. This period that spanned water years 2012 through 2016 included the driest four-year statewide precipitation on record (2012-2015) and the smallest Sierra-Cascades snowpack on record (2015, with five percent of average). It was marked by extraordinary heat: 2014, 2015, and 2016 were California's first, second and third warmest year in terms of statewide average temperatures. Locally, Orange County rainfall for the five-year period totaled 36 inches, the driest on record.

7.5.1.1 Water Demand Characterization

Mesa Water supplies all of its demands using locally pumped groundwater. Mesa Water has access to MET imported water as an emergency backup supply. As described in Section 6.2.1, MET's supplies are from the Colorado River, SWP, and in-region storage. In MET's 2025 UWMP, the DRA concluded that even without activating WSCP actions, MET can reliably provide water to all of their member agencies, including MWDOC, through 2050, assuming a five-year drought from FY 2025-26 through FY 2029-30. Beyond this, MET's DRA indicated a surplus of supplies that would be available to all of its member agencies, including MWDOC, should the need arise. Therefore, any increase in demand that is experienced in MWDOC's service area will be met by MET's water supplies.

Based on MWDOC's water demand projection model, in a single dry year, demand is expected to increase by seven percent above a normal year. MWDOC's DRA conservatively assumes that a drought from FY 2025-26 through FY 2029-30 is a repeat of the single dry year over five consecutive years (MWDOC, 2025).

MWDOC developed its water demand forecast model in a number of steps. First, MWDOC estimated total retail demands for its service area. This was based on estimated future demands using historical water use trends, future expected water use efficiency measures, additional projected land-use development, and changes in population. Next, MWDOC estimated the projections of local supplies derived from current and expected local supply programs from MWDOC member agencies. Finally, MWDOC used its demand model to calculate the difference between total forecasted demands and local supply projections. The resulting difference between total demands net of savings from conservation and local supplies is the expected regional demands on MWDOC. The sum of the 1) M&I demand estimated from the model and the 2) non-M&I water for surface water storage and groundwater replenishment, equate MWDOC's demand, which is supplied by MET.

7.5.1.2 Water Supply Characterization

Mesa Water District's assumptions for its supply capabilities are discussed and presented in 5-year increments under its water reliability assessment in Section 7.3. For MWDOC's DRA, these supply capabilities are further refined and presented annually for the years 2026 to 2030, which MWDOC (2025) applied a historical dry-year sequence from within 199-2024 dataset as an analog for five consecutive dry years. For its DRA, MWDOC assessed the reliability of supplies available to MWDOC through MET using historical supply availability under dry-year conditions. MET's supply sources under the CR, SWP, and in-region supply categories are individually listed and discussed in detail in MET's UWMP. Future supply capabilities for each of these supply sources are also individually tabulated in Appendix 3 of MET's UWMP, with consideration for plausible changes on projected supplies under climate change conditions, anticipated regulatory changes, and other factors. MWDOC's supplies are used to meet consumptive use,

surface water and groundwater recharge needs that are in excess of locally available supplies. In addition, MWDOC has access to supply augmentation actions through MET. MET may exercise these actions based on regional need, and in accordance with their WSCP, and may include the use of supplies and storage programs within the Colorado River, SWP, and in-region storage.

7.5.2 Total Water Supply and Use Comparison

Mesa Water District's anticipated total water use and supply under a five-year drought from FY 2025-26 through FY 2029-30, are compared in Table 7.7. Mesa Water District's assessment reveals that its supply capabilities are expected to balance with its projected water use for the next five years, from 2026 to 2030, under a repeat of a five-consecutive-year drought.

Table 7.7 Submittal Table 7-5 Retail: Five-Year Drought Risk Assessment

Submittal Table 7-5 Retail: Five-Year Drought Risk Assessment Water Code Section 10635(b)(3)			
2026			Total
Total Water Use	(AF)		17,705
Total Supplies	(AF)		17,705
Surplus/Shortfall w/o WSCP Action			0
2027			Total
Total Water Use	(AF)		18,488
Total Supplies	(AF)		18,488
Surplus/Shortfall w/o WSCP Action			0
2028			Total
Total Water Use	(AF)		18,603
Total Supplies	(AF)		18,603
Surplus/Shortfall w/o WSCP Action			0
2029			Total
Total Water Use	(AF)		18,955
Total Supplies	(AF)		18,955
Surplus/Shortfall w/o WSCP Action			0
2030			Total
Total Water Use	(AF)		19,277
Total Supplies	(AF)		19,277
Surplus/Shortfall w/o WSCP Action			0
NOTES: Groundwater is sustainably managed through the BPP and robust management measures (Section 6.3.4 and Appendix I); recycled water provides additional local supply (Section 6.6); and based on MET's and MWDOC's UWMPs, imported water is available to close any water supply gap, should the need arise (Section 7.5.1).			

7.5.3 Water Source Reliability

Mesa Water District's potable water supply portfolio is from the Orange County Groundwater Basin, which provides 100 percent of Mesa Water's supply and is expected to remain a reliable source through

FY 2029–30. OCWD’s active basin management, such as adjusting the BPP and securing supplemental recharge supplies, helps maintain long-term groundwater reliability. Local supply is further strengthened by OCWD’s use of indirect potable reuse water from OCWD’s Groundwater Replenishment System, which enhances drought resilience. While emergency interconnections with neighboring agencies are not part of the normal supply mix, they offer additional backup capacity if ever needed. Mesa Water District’s DRA concludes that available supplies meet projected demands during a modeled five-year drought, with the ability to implement MET purchases if necessary.

As detailed in Section 8, Mesa Water District has in place a robust WSCP and comprehensive shortage response planning efforts that include demand reduction measures and supply augmentation actions. However, since Mesa Water District’s DRA shows a balance, no water service reliability concern is anticipated, and no shortfall mitigation measures are expected to be exercised over the next five years. Mesa Water District and its wholesale, MWDOC, will periodically revisit its representation of the supply sources and of the gross water use estimated for each year, and will revise the DRA if needed.

CHAPTER 8 WATER SHORTAGE CONTINGENCY PLANNING

8.1 Background

Water shortage contingency planning is a strategic planning process that Mesa Water District (Mesa Water) engages to prepare for and respond to water shortages. A water shortage is defined when water supply available is insufficient to meet the customer demand at a given point in time. This may occur due to water supply availability changes, water quality changes, and/or catastrophic events (e.g., earthquake). The Water Shortage Contingency Plan (WSCP), included in Appendix F and summarized in this chapter, provides a water supply availability assessment and structured steps designed to respond to actual conditions. This level of detailed planning and preparation is intended to help maintain reliable supplies and reduce the impacts of supply interruptions.

The Water Code Section 10632 requires that every urban water supplier that serves more than 3,000 acre-feet per year (AFY) or has more than 3,000 connections prepare and adopt a standalone WSCP as part of its Urban Water Management Plan (UWMP). The WSCP is required to plan for a greater than 50 percent supply shortage. The WSCP may require updating based on new Department of Water Resources (DWR) requirements every five years and will be adopted as a current update for submission to DWR by July 1, 2026.

8.2 Overview of the Water Shortage Contingency Plan

The WSCP serves as the operating manual that Mesa Water will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages. The WSCP defines the processes and procedures that would be deployed when shortage conditions arise so that Mesa Water’s governing body, its staff, and the public can easily identify and efficiently implement pre-determined steps to mitigate a water shortage to the level appropriate for the degree of water shortfall anticipated. The relationship between the three procedural documents related to planning for and responding to water shortages is graphically depicted in Figure 8.1.

Figure 8.1 Purpose and Relationships of the UWMP, WSCP, and Water Shortage Response Ordinance

A complete version of Mesa Water’s WSCP is provided in Appendix F and includes the steps to assess if a water shortage is occurring, and what level of demand reduction actions to trigger the most appropriate response to the water shortage conditions. The WSCP has prescriptive elements, including an analysis of water supply reliability; the drought shortage actions that align with water shortage levels that correspond to water shortage percentages ranging from 10 percent to greater than 50 percent; an estimate of potential to close supply gap for each measure; protocols and procedures to communicate identified actions for any current or predicted water shortage conditions; procedures for an annual water supply and demand assessment; monitoring and reporting requirements to determine customer compliance; and reevaluation and improvement procedures for evaluating the WSCP.

8.3 Summary of Water Shortage Response Strategy and Required DWR Tables

The WSCP is organized into the following three main sections with Section 3 aligned with the California Water Code Section 16032 requirements:

- **Section 1 Introduction and WSCP Overview** gives an overview of the WSCP fundamentals.
- **Section 2 Background Information** provides a background on Mesa Water’s water service area.
- **Section 3 Water Shortage Contingency Preparedness and Response Planning.**
 - » **Section 3.1 Water Supply Reliability Analysis** provides a summary of the water supply analysis and water reliability findings from the 2025 UWMP.
 - » **Section 3.2 Annual Water Supply and Demand Assessment Procedures** provides a description of procedures to conduct and approve the Annual Assessment.
 - » **Section 3.3 Six Standard Water Shortage Stages** explains the WSCP’s six standard water shortage levels corresponding to progressive ranges of up to 10, 20, 30, 40, 50, and more than 50 percent shortages.
 - » **Section 3.4 Shortage Response Actions** describes the WSCP’s shortage response actions that align with the defined shortage levels.
 - » **Section 3.5 Communication Protocols** addresses communication protocols and procedures to inform customers, the public, interested parties, and local, regional, and state governments, regarding any current or predicted shortages and any resulting shortage response actions.
 - » **Section 3.6 Compliance and Enforcement** describes customer compliance, enforcement, appeal, and exemption procedures for triggered shortage response actions.
 - » **Section 3.7 Legal Authorities** describes the legal authorities that enable Mesa Water to implement and enforce its shortage response actions.
 - » **Section 3.8 Financial Consequences of the WSCP** provides a description of the financial consequences of and responses for drought conditions.
 - » **Section 3.9 Monitoring and Reporting** describes monitoring and reporting requirements and procedures that ensure appropriate data is collected, tracked, and analyzed for purposes of monitoring customer compliance and to meet state reporting requirements.
 - » **Section 3.10 WSCP Refinement Procedures** addresses reevaluation and improvement procedures for monitoring and evaluating the functionality of the WSCP.

- » **Section 3.11 Special Water Feature Distinction** provides a required definition for inclusion in a WSCP per the Water Code.
- » **Section 3.12 Plan Adoption, Submittal, and Availability** describes the process Mesa Water followed to adopt its WSCP.

The WSCP is based on adequate details of demand reduction and supply augmentation measures that are structured to match varying degrees of shortage will aim to make the relevant stakeholders understand what to expect during a water shortage situation. Mesa Water adopted water shortage levels consistent with the requirements identified in Water Code Section 10632 (a)(3)(A) (Table 8.1).

The six shortage levels that Mesa Water uses in their water shortage planning and documented in their WSCP are the same as DWR’s six standard shortage levels in terms of percentage shortage range for each of the six levels, as indicated in Table 8.1. The water supply augmentation measures that align with each agency shortage level are described in Table 8.2. This table also estimates the extent to which that action will augment supplies to reduce the gap between supplies and demands. The demand reduction action measures that align with each shortage level and how each measure will reduce the shortage gap between expected supplies and the shortage level is summarized in Table 8.3. The purpose of Table 8.2 and Table 8.3 are to demonstrate the results that Mesa Water can expect once shortage level actions are implemented to deliver the expected outcomes necessary to meet the requirements of a given shortage level.

			(AF)		
Add additional rows as needed					
0	Landscape - Prohibit certain types of landscape irrigation		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Watering or irrigation of nonfunctional turf (NFT) on State and local government properties, commercial, industrial and institutional owned landscapes, homeowners' associations common area landscapes, and local government facilities in disadvantaged communities (DAC) is prohibited. See Note 1 below.	No
0	Landscape - Other landscape restriction or prohibition		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Irrigation During Rain Events: The application of potable water to outdoor landscapes during and up to forty-eight (48) hours after measurable rainfall is prohibited.	Yes
0	Landscape - Prohibit certain types of landscape irrigation		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Irrigated Medians: The use of potable water to irrigate ornamental turf on public street medians is prohibited.	Yes
0	Landscape - Restrict or prohibit runoff from landscape irrigation		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Excessive Water Flow or Runoff: No person shall cause or allow watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive runoff from the property. Additionally, to the extent prohibited by any Statewide statute, or regulation adopted by any State agency with jurisdiction to adopt such regulations, including, but no limited to, the State Water Resources Control Board, no person shall cause or allow water to flow or runoff their property onto adjacent property, non-irrigated areas, private and public walkways, driveways, roadways, gutters or ditches, parking lots, or structures.	Yes
0	Other - Prohibit use of potable water for washing hard surfaces		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Washing Down Hard or Paved Surfaces: Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a fully functioning, positive self-closing water shut-off device, a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom.	Yes
0	Water Features - Restrict water use for decorative water features, such as fountains		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Re-circulating Water Required for Water Fountains and Decorative Water Features: Operating a water fountain or other decorative water feature that does not use re-circulated water is prohibited.	Yes
0	Other - Require automatic shut of hoses		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Limits on Washing Vehicles: Using water to wash or clean a vehicle, including but not limited to any automobile, truck, van, bus, motorcycle, boat or trailer, whether motorized or not is prohibited, except by use of a hand-held bucket or similar container or a hand-held hose equipped with a fully functioning, positive self-closing water shut-off nozzle or device that causes it to cease dispensing water immediately when not in use. This subsection does not apply to any commercial car washing facility.	Yes
0	Other		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Installation of Single Pass Cooling Systems: Installation of single pass cooling systems is prohibited in buildings requesting new water service from Mesa Water District.	Yes
0	CII - Other CII restriction or prohibition		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Installation of Non-re-circulating in Commercial Car Wash and Laundry Systems: Installation of non-re-circulating water systems is prohibited in new commercial conveyor car wash and new commercial laundry systems.	Yes
0	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Commercial Car Wash Systems: All commercial conveyor car wash systems must utilize re-circulating water systems or must secure a waiver of this requirement from Mesa Water District.	Yes

Submittal Table 8-3 Retail: Demand Reduction Actions Water Code Section 10632(a)(4)(B) and (E)					
Yes	Is the Supplier completing this table using the standard six levels? (yes/no)				
Shortage Level	Demand Reduction Actions Drop down list These are the only categories that will be accepted by the WUEdata online submittal tool. Select those that apply. 		Volume or Percentage Drop down	Shortage Gap Reduction Value (May be a range)		
			(AF)		
1	Landscape - Limit landscape irrigation to specific times	Percentage	5%	Limits on Watering Hours: Watering or irrigating of lawn, landscape, or other vegetated area with potable water is prohibited between the hours of 8:00 a.m. and 5:00 p.m. Pacific Standard Time on any day. Hand-held watering cans, buckets, or similar containers reasonably used to convey water for irrigation purposes are not subject to these time restrictions. Similarly, a hand-held hose equipped with a fully functioning, positive self-closing water shut-off nozzle or device may be used during the otherwise restricted period. If necessary, and for very short periods of time for the express purpose of adjusting or repairing it, one may operate an irrigation system during the otherwise restricted period.	Yes
1	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of five (5) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
1	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within ninety-six (96) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
2	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of four (4) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
2	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within seventy-two (72) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
3	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of three (3) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
3	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within forty-eight (48) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
3	Water Features - Restrict water use for decorative water features, such as fountains	Percentage	2%	Limits on Filling Ornamental Fountains, Lakes, and Ponds: Filling or re-filling ornamental fountains, lakes, and ponds is prohibited, except to the extent needed to sustain aquatic life, provided that such animals have been actively managed within the water feature prior to declaration of a supply shortage level under this Conservation Program.	Yes

Submittal Table 8-3 Retail: Demand Reduction Actions Water Code Section 10632(a)(4)(B) and (E)

		Volume or Percentage Drop down	Shortage Gap Reduction Value (May be a range)		
			(AF)		
4	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of two (2) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
4	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within twenty-four (24) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
5	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of one (1) day per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
5	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water	Percentage	3%	Car Washing at Commercial Facilities Only: Washing of motor vehicles, trailers, boats, aircraft and other types of mobile equipment shall be done only at a commercial car wash with water recycling facilities. No restrictions apply where the health, safety, and welfare of the public is contingent upon frequent vehicle cleaning, such as with refuse trucks and vehicles used to transport food and perishables.	Yes
5	Other water feature or swimming pool restriction	Percentage	2%	No Initial Filling or Re-Filling of Swimming Pools & Spas: Filling and Re-Filling of residential swimming pools or outdoor spas with water is prohibited.	Yes
6	Landscape - Prohibit all landscape irrigation	Percentage	10%	No Watering or Irrigating: Watering or irrigating of lawn, landscape, or other vegetated area is prohibited. This restriction does not apply to the following categories of use: Maintenance of vegetation, including trees and shrubs, that are watered using a hand-held bucket or similar container, hand-held hose equipped with a positive self-closing water shut-off nozzle or device; Maintenance of existing landscape necessary for fire protection; Maintenance of existing landscape for soil erosion control; Maintenance of plant materials identified to be rare or essential to the well-being of protected species. Maintenance of landscape within active public parks and playing fields, day care centers, golf course greens, and school grounds, provided that such irrigation does not exceed a maximum of two (2) days per week according to the schedule established in Section 8(b)(1) and time restrictions in Section 6(a); Actively irrigated environmental mitigation projects.	Yes
DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3.					
NOTES: Note 1: NFT irrigation requirements begin January 1, 2027 for State and local government properties, January 1, 2028 for commercial, industrial and institutional owned landscapes, January 1, 2029 for homeowners' associations common area landscapes, and January 1, 2031 for local government properties in disadvantaged communities (DAC).					

CHAPTER 9 DEMAND MANAGEMENT MEASURES

Over the past several decades, water use efficiency and conservation have evolved from voluntary best practices into core regulatory requirements shaping urban water management throughout California and Orange County. In response to recurring droughts, growing urban demand, and increasing competition for limited water supplies, the California Urban Water Conservation Council (CUWCC) was formed in 1991 to promote statewide cooperation on urban water conservation. Through the development and implementation of the CUWCC Best Management Practices, water agencies established a consistent, voluntary framework for improving efficiency through locally tailored programs. This early foundation was later strengthened by legislative actions, most notably Senate Bill (SB) X7-7, the Water Conservation Act of 2009, which set enforceable urban water use reduction targets to cut per capita use by 20 percent by 2020 and required retail water suppliers to actively manage demand as part of long-term water planning. All Orange County water agencies came together to create the Orange County 20x2020 Regional Alliance and met compliance as a region. Mesa Water District (Mesa Water) also met compliance individually. These efforts reflected a growing recognition that efficient water use is essential to ensuring reliability amid population growth, limited supplies, and increasing climate variability.

Recurring drought conditions have further accelerated the pace and scale of conservation efforts in the last decade. The 2013–2014 drought prompted a statewide emergency response, culminating in an executive order mandating a 25 percent reduction in urban water use across California. All Orange County Water Agencies, including Mesa Water, met this reduction target as reported in Chapter 5 of this 2025 Urban Water Management Plan (UWMP). More recently, the 2021–2022 drought reinforced the need for sustained efficiency gains and durable demand management strategies beyond temporary emergency actions. These regulatory and hydrologic drivers ultimately led to the passing and adoption of SB 606 and Assembly Bill (AB) 1668, the “Making Conservation a California Way of Life” legislation (passed in 2018 and adopted in 2024). The legislation establishes long-term water use objectives for individual water suppliers and reinforces conservation as a permanent element of water management. Together, these milestones underscore the necessity for the Municipal Water District of Orange County (MWDOC) and Mesa Water to implement comprehensive demand management measures and meet established urban water use reduction targets to ensure regional water supply resilience.

The goal of the Demand Management Measures (DMM) chapter is to provide a comprehensive description of the water use efficiency programs that Mesa Water has implemented in the most recent five years, is currently implementing, and plans to implement to meet its urban water use reduction targets. Per the “Making California a Conservation Way of Life” Framework (Conservation Framework), each Urban Water Supplier is required to calculate and report their Urban Water Use Objective (UWUO) and to stay within their calculated annual water budget. The UWUO is an aggregate efficient water use of:

- Indoor Residential Use (population x gallons per capita per day (GPCD) standard);
- Outdoor Residential Use (measurements of irrigated/irrigable area, local weather data, and a landscape efficiency factor);
- Outdoor Use with Dedicated Irrigation Meters (measurements of irrigated area, local weather data, and a landscape efficiency factor);
- Distribution System Water Losses;

- Approved Variances; and
- Potable Reuse Bonus.

Additionally, the Conservation Framework includes commercial, industrial, and institutional (CII) non-volumetric Performance Measures, including CII customer account classifications, thresholds for converting mixed-use CII meters (MUM) irrigating over half an acre of landscape to dedicated irrigation meters (DIM) or in lieu technologies, CII best management practices (BMP), and identification of and information sharing with disclosable buildings.

One of Mesa Water’s top priorities since the adoption of the “Making Conservation a California Way of Life” Framework has been to make progress toward compliance with the Conservation Framework. This chapter will describe Mesa Water’s Demand Management Measure (DMM) activities, including those administered by its wholesaler and supplemental programs administered locally at the retail level.

9.1 Mesa Water District Demand Management Measures

This section describes the specific DMMs performed by Mesa Water, including DMMs offered in partnership with MWDOC, its wholesale supplier, to encourage water conservation within their service area. Table 9.1 summarizes DMM implementation by Mesa Water as well as responsibilities of MWDOC.

Notes:

- (1) MWDOK does not own or operate a distribution system; water wholesaled by MWDOK is delivered through the Metropolitan Water District of Southern California (MET) distribution system and meters.

9.1.1 Operations Practices

9.1.1.1 Wholesale Agency Assistance Programs

MWDOK's Assistance Programs are described in Section 9.3.

9.1.1.2 Conservation Pricing

Mesa Water's water rate schedule is based on a uniform rate structure for commodity charges. Mesa Water's water rates effective as of January 1, 2025 are shown below (Table 9.2).

Table 9.2 [Mesa Water District Water Rates](#)

Type of Water	Water Rate (per 100 cubic feet)
Potable Water	\$6.83
Recycled Water	\$4.38
Construction Water	\$6.83
Fireline Water	\$6.83

9.1.1.3 Water Conservation Staffing Support

Mesa Water has established a position titled Water Use Efficiency Specialist within their Public Affairs Department who is responsible for the development, implementation, and management of Mesa Water's comprehensive Water Use Efficiency Program including promotion and evaluation of water use efficiency

measures. The following list highlights areas of responsibility of the Water Use Efficiency Specialist position:

- Develops and implements cost-effective water use efficiency programs; tracks customer contact and program progress; reports on progress.
- Plans and presents landscape workshops; promotes water use efficiency and runoff reduction through public relations, educational speeches, and private contact; monitors and maintains Mesa Water's demonstration gardens and various site landscapes.
- Schedules and conducts audits/inspections for Mesa Water's rebate program, which includes verifying water use efficiency devices, conducting pre-turf & post-turf inspections, and other related tasks.
- Administers, updates, and enforces Mesa Water's Water Conservation Ordinance as necessary; answers questions related to compliance; issues notices of violation and letters to customers not in compliance with current requirements.
- Creates, updates and implements Mesa Water's Water Use Efficiency Plan; participates in the development of Mesa Water's Urban Water Management Plan.
- Gathers, analyzes, and interprets data and information related to water use; captures relevant data in system database; creates tables, queries, forms, and reports utilizing the database; prepares a variety of written reports, correspondence, records, and proposed regulations and procedures; use data to evaluate program effectiveness and develop recommendations for program modifications.
- Identifies and evaluates water use efficiency measures and practices for commercial, industrial, institutional, and residential customers; recommends incentives to alter water use practices including fixture and appliance retrofit programs; calculates cost/benefit analysis; evaluates and purchases devices for implementation.
- Conducts water surveys, investigations, and evaluations of residential, commercial, industrial, and institutional customers; assesses the efficiency of water use, particularly for landscape irrigation; provides recommendations on water usage and efficiency techniques, fixture and appliance retrofit, equipment improvements, and other methods of achieving more efficient water use.
- Calculates water budgets for commercial irrigation customers in accordance with District guidelines and legal requirements.
- Identifies, targets, and measures commercial irrigation accounts; interprets irrigation site plans; measures sites; calculates and updates site budget.
- Utilizes database to determine account usage patterns; installs data loggers on water meters; downloads and evaluates data logger data; recommends changes based on data logger data.
- Interacts with the public, property manager, landscape manager, staff, and outside agencies.
- Assists with the implementation, monitoring, and reporting of water use efficiency research projects and grants; assists in identifying and securing local, state and federal grant funding for water use efficiency programs.
- Participates in representing Mesa Water on water use efficiency issues to committees, meetings, community groups, and the public.
- Provides current program information for Mesa Water's website, newsletters, social media content and collateral materials.

9.1.1.4 Water Waste Prevention Ordinances

Mesa Water's Board of Directors adopted the Water Conservation and Water Supply Emergency Program, Ordinance No. 26, on May 14, 2015. The Conservation Program established an updated and consolidated water supply and water conservation emergency program to conform to additional State Water Resources Control Board Regulations, and the Ordinance established provision for prohibitions against waste as follows:

- Limits on watering hours.
- No excessive water flow or runoff.
- No washing down hard or paved surfaces.
- Obligations to fix leaks, breaks, and malfunctions.
- Re-circulating water required for water fountains and decorative water features.
- Limits on washing vehicles.
- Drinking water served upon requests only.
- Commercial lodging establishments must provide guests option to decline daily linen service.
- No installation of single pass cooling systems.
- No installation of non-re-circulating in commercial car wash and laundry systems.
- Restaurants required to use water conserving dish wash spray valves.
- Commercial car wash systems must use recirculating system.
- Recycled water use is required if available.
- Use recycled water at new service where available, cost-effective, and safe.
- Prohibition to irrigate turf with potable water on medians – replaced with California friendly plants.

The Conservation Program has a permanent water conservation clause and is not dependent upon a water shortage for implementation. In the event of a water supply shortage, the Conservation Program established provisions for three levels of water supply shortage response actions associated with increasingly restrictive prohibitions to be implemented during a declared shortage. Level 1 corresponds to a water supply shortage alert; Level 2 corresponds to a water supply shortage warning; and Level 3 corresponds to a water supply shortage emergency. The provisions and water conservation measures to be implemented in response to each shortage level are described in Mesa Water's Water Shortage Contingency Plan (WSCP).

In June 2021, Ordinance No. 26 was rescinded in favor of Ordinance number 32 – the Water Shortage Response Ordinance – which aligned Mesa Water's code with recent updates to the California Water Code (Water Code) and the recently adopted 2020 UWMP and WSCP. Then, in February 2022, Ordinance No. 32 was rescinded in favor of Ordinance 33- a revised Water Shortage Response Ordinance created to reflect updates to Mesa Water's water shortage policies.

9.1.1.5 Water Loss Control

SB 555 signed into law in 2015 requires urban water suppliers to submit annual, validated water loss audit reports to the California Department of Water Resources (DWR). Water auditing is the basis for effective water loss control. DWR's UWMP Guidebook includes a water audit manual intended to help water

utilities complete the American Water Works Association (AWWA) Water Audit on an annual basis. Audits must be validated by a certified water auditor to ensure accuracy.

Mesa Water consistently monitors water production with supervisory control and data acquisition (SCADA) and performs a formal water loss audit each year. Additionally, when a leak is discovered, Mesa Water staff typically respond as soon as it is practical to make repairs. Mesa Water's prescreening audit has determined that typically 94-95 percent of total supply into the system is typically captured in sales.

Mesa Water performs the AWWA Water Audit each year and routine maintenance is tracked in a Computerized Maintenance Management System (CMMS). The CMMS plans, schedules, and values all mainline, hydrant, meter, valve, and other infrastructure replacement and maintenance. Mesa Water also allocates a budget and systematic workplan for the replacement and maintenance of the infrastructure, and by following this workplan has spent over \$1 million each year replacing routine capital infrastructure including hydrants, valves, and service lines. Mesa Water is currently running a pipeline integrity program to determine the strength, quality, and remaining useful service life of pipelines in the distribution system. This will also direct Mesa Water where leak detection should be increased.

All water service connections supplied by Mesa Water are fully metered, and customers are billed by volume of water used. Mesa Water requires individual metering for all new connections. Mesa Water has a program to replace meters every 15 year as well as replacement of any meters that fail due to malfunctions and under-registration. Calibration testing is performed along with the water loss audit every year. All three inch and larger meters are tested every year to AWWA calibration standards. Mesa Water evaluates the property's water usage versus the meter's efficiency to determine whether meters should be rebuilt and/or replaced. Mesa Water does not have statutory authority to mandate submeters but requires dedicated irrigation meters that are read and billed by Mesa Water for all CII and Multi-Family developments with irrigated landscape over 1,000 square feet. Mesa Water has implemented an Automatic Meter Reading (AMR) pilot project for the meters on its "large customer" route (Route 600) and is currently reviewing its progress and effectiveness and may implement a permanent program in a cost-effective manner.

9.1.2 Public Education and Outreach

Mesa Water implements several public education and outreach measures, including the programs administered by MWDOC, its wholesale supplier. Mesa Water develops, coordinates, and delivers a substantial amount of public information, education, and outreach programs aimed at elevating water agency and consumer awareness and understanding of current water issues as well as efficient water use and water-saving practices, sound policy, and water reliability investments that are in the best interest of the region. These efforts encourage good water stewardship that benefits all of Mesa Water's residents, businesses, and industries across all demographics. An outline of Mesa Water's public education initiatives is below.

9.1.2.1 K-20 Water Education Initiatives and K-12 School Programs

Over the past several years, MWDOC's investment in K-20 water education has significantly grown, evolving to include programs and activities that support environmental literacy for all Orange County students. The effort has expanded beyond K-12 water education programs to include career and

workforce development initiatives in higher education through the Water Energy Education Alliance (WEEA) described in more detail in Section 9.1.2.4.

MWDOC's K-12 Water Education School Programs bring standards-aligned, engaging water lessons directly into classrooms and connect water to every part of students' lives. All elementary, middle, and high school programs meet California State Standards and Next Generation Science Standards, providing students with high-quality, relevant learning experiences that build both academic and real-world understanding. This includes a Grab-and-Go Water Activities program, developed in partnership with the Orange County Department of Education, that provides free, self-guided water activities for K-12 teachers, parents and students.

9.1.2.2 OC Scouts Boy Scouts of America (BSA) and OC Girl Scouts Programs

Mesa Water, in partnership with MWDOC, hosts multiple water education workshops each year to help Scouts BSA earn the *Soil & Water Conservation Merit Badge* and Girl Scouts earn the *MWDOC Water Resources & Conservation Patch*. These hands-on science, technology, engineering, and mathematics (STEM) clinics teach children of all ages where their water comes from, how to use water more efficiently, and how all life depends on the health and security of our natural resources, fostering water awareness and responsibility through fun, activity-based learning.

9.1.2.3 Water Awareness Poster Contest

Mesa Water participates in MWDOC's annual Water Awareness Poster Contest, offered for students in grades K-12. The Poster Contest presents children with an opportunity to use their artistic talents to express the importance and value of water through artwork. Each year, hundreds of entries are collected from students and classrooms across the county, and from these entries, 40 winners are selected.

9.1.2.4 Water Energy Education Alliance (WEEA)

The WEEA unites over 260 water, energy, and education leaders across the state to build and strengthen career pathways for all California students. Administered and led by the MWDOC, WEEA is comprised of a powerful statewide coalition of education leaders, workforce advocates, and industry experts to raise student awareness, forge strong partnerships, and cultivate a diverse, highly skilled talent pipeline. By connecting students with high-impact opportunities, WEEA is shaping a workforce that fuels industry success, enhances worker well-being, and ensures a resilient, thriving California.

9.1.2.5 Qualified Water Efficient Landscaper (QWEL) Training Program

Since 2018, MWDOC along with Mesa Water, has offered free QWEL certification classes designed for landscape professionals. Classes are open to any city staff, professional landscaper, water district employee, or maintenance personnel that would like to become a Qualified Water Efficient Landscaper. The QWEL certification program provides 20 hours of instruction on water efficient areas of expertise such as local water supply, sustainable landscaping, soil types, irrigation systems and maintenance, as well as irrigation controller scheduling and programming. QWEL has received recognition from EPA WaterSense for continued promotion of water use efficiency. To earn the QWEL certification, class participants must demonstrate their ability to perform an irrigation audit as well as pass the QWEL exam. Successful graduates will be listed as a Certified Professional on the WaterSense website as well as on MWDOC's

landscape resources page, to encourage Turf Removal participants or those making any landscape improvements to hire a QWEL certified professional.

Started in December 2020, a hybrid version of QWEL is available in conjunction with the California Landscape Contractors Association's Water Management Certification Program. This joint effort allows landscape industry an opportunity to obtain two nationally recognized EPA WaterSense Professional Certifications with one course and one written test. This option is offered through MET.

9.1.3 Residential Indoor Rebate Programs

Mesa Water partners with MWDOC to implement residential measures that target indoor water use efficiency for single family and multifamily residential customers.

9.1.3.1 High Efficiency Clothes Washer and Toilet Rebate Programs

The High Efficiency Clothes Washer (HECW) Rebate Program provides residential customers with rebates starting at \$85 for purchasing and installing HECWs that use 35-50 percent less water than standard washer models. Devices must meet or exceed the Consortium for Energy Efficiency (CEE) Tier 1 Standard, and a listing of qualified products can be found at ocwatersmart.com. There is a maximum of one rebate per home.

The Premium High Efficiency Toilet (HET) Rebate Program offers residential customers rebates starting at \$40 for replacing their toilets using 1.6 gallons per flush (gpf) with Premium HETs. Premium HETs use just 1.1 gallons of water or less per flush, which is 20 percent less water than WaterSense standard toilets

9.1.3.2 Flow Monitor Device Pilot

This pilot program provides rebates starting at \$100, or more in select areas, per flow monitor device installed. These devices monitor a home's water use and can help detect leaks, making them a proactive tool for preventing expensive water bills and water damage due to unforeseen leaks. A list of residential rebate-eligible flow monitoring devices is provided.

9.1.4 CII Programs

Mesa Water provides a variety of financial incentives, in partnership with MWDOC, to help businesses, restaurants, institutions, hotels, hospitals, industrial facilities, and public sector sites achieve their efficiency goals. Water users in these sectors have options to choose from a standardized list of water efficient equipment/devices or may complete customized projects through a pay-for-performance where the incentive is proportional to the amount of water saved. Such projects include high efficiency commercial equipment installation and manufacturing process improvements.

9.1.4.1 Water Savings Incentive Program

The Water Savings Incentive Program (WSIP) is designed for non-residential customers to improve their water efficiency through upgraded equipment or services that do not qualify for standard rebates. WSIP is unique because it provides an incentive based on the actual amount of water saved by the customers. This "pay-for-performance" design lets customers implement custom projects for their sites. Mesa Water partners with MWDOC and MET to offer this program.

Projects must save at least 10 million gallons (MG) of water to qualify for the Program, and incentives are paid by MET based on the amount of water saved. Payment amount is up to \$0.60 per 1,000 gallons saved per year over the project life, up to a maximum of 10 years. Payments are limited to 50 percent of the eligible project costs while funding is available. Additional funding may be available through MWDOC, but it is limited. Examples of successful projects include but are not limited to: changing industrial process system water to capture and reuse process wastewater, capturing condensation and using it to supplement cooling tower water supply, and replacing water-using equipment with more efficient products.

9.1.4.2 Recycled Water On-site Retrofit Program

Through the Recycled Water On-site Retrofit Program, MWDOC and MET offers incentives for CII properties to convert potable water irrigation or industrial systems to recycled water. Financial incentives of up to \$1,950 per acre-foot of potable water saved are available for the customer-side on the meter retrofits. Projects may also be eligible for up to an additional \$325 per acre-foot of annual water savings from MWDOC. Recycled water conversion projects can help to ensure a more reliable water future for Orange County.

9.1.4.3 CII Rebates

Mesa Water offers additional financial incentives under the SoCal Water\$mart Rebate Program which offers rebates for various water efficient devices to CII customers. Core funding is provided by MET and supplemental funding is sourced from MWDOC via grant funds and/or retail water agencies. Devices include: High Efficiency Toilets and Urinals, Plumbing Flow Control Valves, Connectionless Food Steamers, Air-cooled Ice Machines, Food Defrosters, Cooling Tower Conductivity Controllers and pH Controllers, Dry Vacuum Pumps, and Laminar Flow Restrictors.

9.1.5 Landscape Programs

Some of the most active and effective water use efficiency programs Mesa Water provides are those that target the reduction of outdoor water use. With a large proportion of water consumed outdoors via landscape demands, this sector has been and will continue to be a focus for MWDOC and Mesa Water.

9.1.5.1 Turf Replacement Program

The Orange County Turf Replacement Program offers incentives to replace existing turf grass with California-native, drought-tolerant plants and landscaping. Residential, commercial, and public properties in Mesa Water's service area are all eligible for this program. The goals of this program are to increase water use efficiency through sustainable landscaping practices that result in multi-benefit projects across Orange County. Participants are encouraged to utilize smart irrigation timers and furthermore, projects are required to include a stormwater capture feature, such as a rain garden or dry stream bed, and have a minimum of three plants per 100 square feet to increase plant density and promote healthy soils. These projects save water and reduce dry and wet weather runoff, increase urban biomass, and sequester more carbon than turf landscapes.

Additionally, MWDOC is piloting a tree program that allows eligible trees to qualify as a sustainability feature in Turf Replacement projects. Beginning March 4, 2024, Turf Replacement Program participants

became eligible for an additional incentive for planting trees as part of their Turf Replacement project. Participants can receive up to \$100 per tree, for up to 5 trees (\$500), in addition to the Turf Replacement rebate. The pilot goals include increasing the presence of trees in Turf Replacement projects and breaking down barriers to participation. It is anticipated that the pilot will be evaluated in 2026.

9.1.5.2 Spray-to-Drip Rebate Program

The Spray to Drip Rebate Program offers residential, commercial, and public agency customers rebates for converting areas irrigated by traditional high-precipitation rate spray heads to low-precipitation rate drip irrigation. Drip irrigation systems are extremely water efficient. Rather than spraying wide areas subject to wind drift, overspray and runoff, drip systems use point emitters to deliver water to specific locations at or near plant root zones. Water drips slowly from the emitters either onto the soil surface or below ground. As a result, less water is lost to wind, evaporation, and overspray, saving water, and reducing irrigation runoff and non-point source pollution. Mesa Water partners with MWDOC to provide \$1 per square foot of conversion area when replaced with eligible drip irrigation products.

9.1.5.3 SoCal Water\$mart Rebate Program for Landscape

Mesa Water also offers financial incentives under the SoCal Water\$mart Rebate Program for a variety of water efficient landscape devices, such as Smart Irrigation Timers and Central Computer Irrigation Controllers, large rotary nozzles and rotating sprinkler nozzles, soil moisture sensors, irrigation master valves, and in-stem flow regulators.

9.1.5.4 Landscape Design Assistance Rebate

This program is offered for residential customers who are participating in the turf replacement program and are seeking professional design services. Participants must hire a landscape design professional to provide a design that meets the rebate eligible design requirements. Participants will receive up to \$1,000 upon completion of their turf replacement project if they have used a professional designer.

9.2 Mesa Water District DMM Implementation (2020-2025)

During the past five years, Fiscal Year (FY) 2020-21 to 2024-25, Mesa Water, with the assistance of MWDOC, has continued water use efficiency programs for its residential, CII, and landscape customers with the participation shown below (Table 9.3). Mesa Water will continue to implement all applicable programs in the next five years.

Table 9.3 Mesa Water District Water Use Efficiency Program Participation

Program	FY20/21	FY21/22	FY22/23	FY23/24	FY24/25
High Efficiency Clothes Washer (HECW)	99	31	30	32	40
High Efficiency Toilets (HETs)	4	0	0	0	2
Flow Monitoring Devices (FMD)	--	0	1	1	5
Commercial Plumbing Fixtures (CII)	2	0	251	18	161
Water Savings Incentives Projects (WSIP)	0	0	0	0	0
Turf Replacement (Res.)	18,700	29,375	34,191	21,321	11,922
Turf Replacement (Comm.)	1,620	0	55,661	97,512	86,176

Program	FY20/21	FY21/22	FY22/23	FY23/24	FY24/25
Landscape Design Rebate Program (LDAP)	15	14	18	4	0
Landscape Design Rebate Program (LMAP)	5	6	11	6	0
Spray-to-Drip (Res.)	11,062	13,073	22,386	15,877	5,050
Spray-to-Drip (Comm.)	0	7,972	49,775	32,313	17,021
Rotating Nozzles (Small Res.)	0	0	21	0	0
Rotating Nozzles (Small Comm.)	0	0	0	0	0
Rotating Nozzles (Large Comm.)	0	0	0	0	0
Smart Timers (Res.)	30	18	25	28	11
Smart Timers (Comm.)	2	4	14	8	0
Rain Barrels	2	4	6	3	3
Recycled Water Onsite Retrofits	0	0	0	0	0

9.3 MWDOC Demand Management Implementation Assistance Programs

To help facilitate implementation of DMMs throughout Orange County, MWDOC's wholesale efforts focus on the following three areas: 1) State Water Conservation Compliance Assistance (e.g., Conservation Framework and Non-Functional Turf), 2) Regional Rebate Programs and Local Program Assistance, and 3) Research and Evaluation. This both complies with and goes beyond the Foundational BMPs of Utility Operations Programs requirements.

9.3.1 State Water Conservation Compliance Assistance

To support Orange County retailers with compliance of SB 606 and AB 1668, MWDOC is providing multi-level support to assist agencies in meeting the primary goals of the legislation, including to use water more wisely and to eliminate water waste. Beginning in 2023, urban water suppliers were required to calculate and report their annual UWUO, submit validated water audits annually, and implement and report BMP CII performance measures.

MWDOC offers Orange County water suppliers a "Conservation Framework Technical Assistance Program (TAP)" and "Meter Area Measurements Program" to assist them with compliance with the Conservation Framework.

9.3.1.1 Conservation Framework Technical Assistance Program (TAP)

This program provides Orange County water suppliers with support on tasks that are required as part of the Conservation Framework. An agency may opt in to receive support with any of the following:

- Readiness Assessment - perform a retailer-specific readiness assessment, including task recommendations and pricing to help retail agencies understand what areas need to be addressed.
- Conservation Framework Compliance Plan - create a customized Framework Compliance Plan that outlines (1) what the retailer needs to do to prepare for compliance and (2) what needs to be implemented to achieve the water savings necessary to comply with the Urban Water Use Objective

- Annual Report Compilation and Data Management - support the retailer with Annual Report preparation and assistance; and organize and manage data needed to comply with the reporting requirements of the Regulation.
- CII Account Classification - classify CII customer accounts according to the Regulation requirements and create a guidance plan to keep classifications at 95 percent (or higher)
- CII Best Management Practices (BMPs) and In-Lieu Technologies Implementation Plan - create a customized implementation plan mapping compliance with the Conservation Framework regulation, including the CII BMP requirements of § 974, the in-lieu technologies and accompanying BMP requirements in § 973, and disclosable buildings requirements in § 974a.
- Miscellaneous Framework Technical Assistance – various activities such as:
 - » Development of Development of metrics and annual targets to demonstrate progress.
 - » Additional training or technical support.
 - » Workshop or webinar facilitation to spur cross-team collaborations.
 - » Develop outreach and engagement plans and implement meetings to support engagement of internal and external collaborators.

9.3.1.2 Meter Area Measurements Program

The Program assists Orange County water supplier in providing (1) landscape area measurements (LAM) associated with dedicated irrigation meters (DIMs), which may include the creation of water efficiency budgets for dedicated landscape meter customers; (2) identification of MUMs irrigating landscapes greater than half acre and subject to the regulation; and (3) reconciliation of DIM and residential LAMs where areas may overlap.

9.3.2 Regional Rebate Programs and Local Program Assistance

MWDOC develops, obtains funding for, and implements regional water savings rebate programs on behalf of all retail water agencies in Orange County, such as the Turf Replacement Program. This approach minimizes confusion for consumers by providing the same programs with the same participation guidelines, maintains a consistent message to the public to use water efficiently, and provides support to retail water agencies by acting as program administrators for the region. As a leader of water efficiency in Orange County, MWDOC provides a holistic suite of programs that are accessible to all consumer groups in the region. When requested, MWDOC also assists retail agencies in developing and implementing local programs within their service areas. This assistance includes collaboration with each retail agency to design a program that fits that agency's local needs, including providing staffing, targeting customer classes, acquiring grant funding from a variety of sources, and implementing, marketing, reporting, and evaluating the program.

On behalf of its member agencies, MWDOC also organizes and provides the following:

- Monthly coordinator meetings.
- Marketing materials.
- Public speaking.
- Community events.

9.3.3 Research and Evaluation

An essential part of MWDOC's regional water use efficiency program is the ongoing research and evaluation of both existing and potential initiatives. Research allows an agency to measure the water savings benefits of a specific program and compare those benefits to the costs of implementing the program. This allows the agency to evaluate the economic feasibility of the program when compared to other efficiency projects or existing or potential sources of supply, before investing in new initiatives or continuing to implement existing programs. MWDOC routinely conducts statistical water savings (impact) evaluations and process evaluations to guide strategic investment and ensure the effective management of its regional water use efficiency programs.

From 2021 to 2025, MWDOC conducted several research initiatives to support informed decision-making. In partnership with Flume Data Labs, MWDOC completed its Residential End Use Study in 2021, with subsequent updates in 2022 and 2024. This study provided detailed insights into disaggregated residential indoor and outdoor water use, significantly enhancing the understanding of water use patterns across Orange County. In 2023, MWDOC released its Potential and Opportunities study, which quantified the remaining water savings potential in the Orange County residential market, identified the most promising and cost-effective methods for reducing residential demand, and made recommendations on how best to direct financial and technical assistance to Retail Agencies and consumers for implementing residential water efficiency upgrades.

To assess the economic impact of the Conservation Framework, MWDOC worked with M.Cubed and in 2023 published the Draft Water Use Efficiency Standards Economic Analysis: Impact Assessment of State-Mandated Urban Water Use Objectives. MWDOC continues to evaluate the impact of the regulation and Orange County retailer compliance.

Additionally, MWDOC is piloting a tree program that allows eligible trees to qualify as a sustainability feature in Turf Replacement projects. Pilot goals include increasing the presence of trees in Turf Replacement projects and breaking down barriers to participation. It is anticipated that the pilot will be evaluated in 2026. A pilot research program investigating water savings associated with the replacement of broken pressure regulating valves at residential homes wrapped up in 2025. The results of this study are expected in 2027.

9.4 Urban Water Use Objective and CII Performance Measure Compliance

A large focus for Mesa Water is to implement DMMs that will help them to meet the requirements of the Conservation Framework. DMMs described in this chapter may help to support member agencies with meeting their required UWUO and achieving CII Performance Measure Compliance. In addition, MWDOC provides support to agencies to assist with the calculation of UWUOs and compliance with CII Performance measures via the Meter Area Measurement and TAP Programs, as described in Section 9.3.

9.4.1 UWUO Components

Table 9.4 describes MWDOC's programs that will assist agencies in meeting their UWUO, through both direct measures (programs/activities that result in directly quantifiable water savings) and indirect measures (programs that provide resources promoting water efficiencies to the public that are impactful

but not directly measurable). Additionally, MWDOC provides technical assistance to support water suppliers with compliance.

Table 9.4 MWDOC Programs to Help OC Retail Agencies Meet Their Urban Water Use Objectives

UWUO Component	Calculation	Program	Impact
Indoor Residential	Population and GPCD standard	<u>Direct Impact:</u> High efficiency indoor fixtures and appliance rebates	<u>Direct Impact:</u> Increased indoor residential efficiencies and reductions of GPCD use
Outdoor Residential	Irrigated/irrigable area measurement and a landscape efficiency factor of local ETo and effective precipitation	<u>Direct Impact:</u> - Turf Replacement - High efficiency irrigation rebates <u>Indirect Impact:</u> - Online resources such as OC Friendly Gardens Webpage - Educational classes	<u>Direct Impact:</u> - Increase outdoor residential efficiencies and reductions of gallons per ft² of irrigated/ irrigable area used <u>Indirect Impact:</u> - Provide information, resources, and education to promote efficiencies in the landscape
Outdoor Dedicated Irrigation Meters	Irrigated area measurement and a landscape efficiency factor of local ETo and effective precipitation	<u>Technical Assistance:</u> - DIM landscape classification and measurement <u>Direct Impact:</u> - Turf Replacement - High efficiency irrigation rebates <u>Indirect Impact:</u> - OC Friendly Gardens Webpage - Educational training and resources	<u>Technical Assistance:</u> - Classification and measurement of landscapes associated with DIMs are required to complete the calculation. <u>Direct Impact:</u> - Increase outdoor residential efficiencies and reductions of gallons per ft² of irrigated/ irrigable area used. <u>Indirect Impact:</u> - Provide information, resources, and education to promote landscape efficiencies.
Water Loss	Agency-specific loss factor and number of connections	<u>Technical Assistance:</u> - Water Balance Validation - Customer Meter Accuracy Testing - Distribution System Pressure Surveys <u>Direct Impact:</u> - Distribution System Leak Detection	<u>Technical Assistance:</u> - The accuracy of the water loss audit is validated for submission to the State. <u>Direct Impact:</u> - Identify areas of the distribution system that need repair, replacement, or other actions to limit water loss.
Bonus Incentives	Volume of indirect potable reuse water applied to residential and DIM irrigation uses; not to exceed 15% of UWUO	<u>Direct Impact:</u> Groundwater replenishment system (GWRs)	<u>Direct Impact:</u> The GWRs (run by Orange County Water District [OCWD]) recharges the groundwater basin with purified, highly treated wastewater, allowing OCWD-member agencies to access indirect potable reuse.

9.4.2 CII Performance Measures

Urban water supplies are required to report BMPs for CII customers. Mesa Water, in partnership with MWDOC, offers a broad variety of programs and incentives to help CII customers implement BMPs and increase their water efficiencies (Table 9.5).

Table 9.5 Mesa Water District CII BMP and Water Efficiency Programs and Incentives

Component	Requirement	Program Offered	Impact
CII Customer Account Classifications	Classify each CII water user, based on the end-use of water for the water user, in accordance with Energy Star Portfolio Manager's 18 broad categories, in addition to 4 other categories.	<u>Technical Assistance:</u> CII Customer Account Classification	<u>Technical Assistance:</u> Classify customer accounts according to the specified categories to comply with the regulation.
Large Landscape Identification	Identify all CII water users associated with large landscapes – landscapes irrigated with a mixed-use meter greater than half an acre	<u>Technical Assistance:</u> Large Landscape identification	<u>Technical Assistance:</u> Identify and map landscapes associated with MUM landscapes that are greater than half an acre to comply with the regulation.
Best Management Practices (BMPs)	Offer CII BMPs for customers that exceed the recommended size, volume of water use, or another threshold	<u>Technical Assistance:</u> BMP Implementation Plan	<u>Technical Assistance:</u> Provide a BMP Implementation Plan to guide water suppliers with a roadmap to compliance with the regulation.
Disclosable Buildings	Identify disclosable buildings in service area according to the list provided by the California Energy Commission	<u>Technical Assistance:</u> Disclosable buildings list	<u>Technical Assistance:</u> Provide the California Energy Commission list of disclosable buildings by water supplier to comply with the regulation.

CHAPTER 10 PLAN ADOPTION, SUBMITTAL, AND IMPLEMENTATION

The Water Code requires the Urban Water Management Plan (UWMP) to be adopted by Mesa Water District’s (District) governing body. Before the adoption, Mesa Water must hold a public hearing allowing members of the public to provide input on the UWMP. Prior to the public hearing, Mesa Water must notify the public and surrounding cities, counties and water agencies within its service area of the scheduled public hearing. Upon completion of the public hearing, Mesa Water’s governing body shall vote to adopt the UWMP. Post adoption, Mesa Water submits the UWMP to the Department of Water Resources (DWR) while also making it available for public access. This section provides a record of the process Mesa Water followed to adopt and implement its UWMP.

10.1 Overview

Recognizing that close coordination among other relevant public agencies is key to the success of its UWMP, Mesa Water worked closely with other entities to develop and update this planning document. Mesa Water also encouraged public involvement through its public review and hearing process, which provided residents with an opportunity to learn and ask questions about their water supply management and reliability. Through the public hearing, the public has an opportunity to comment and put forward any suggestions for revisions of the Plan.

Table 10.1 summarizes external coordination and outreach activities carried out by Mesa Water and their corresponding dates. The UWMP checklist to confirm compliance with the Water Code is provided in Appendix A.

Table 10.1 External Coordination and Outreach

External Coordination and Outreach	Date	Reference
Notified city or county within supplier’s service area that water supplier is preparing an updated UWMP (at least 60 days prior to public hearing)	4/24/2026	Appendix I
Public Hearing Notice	06/08/2026 06/15/2026	
Held Public Hearing	6/24/2026	Appendix I
Adopted UWMP and WSCP	6/24/2026	Appendix J
Submitted UWMP to DWR (no later than 30 days after adoption)	07/01/2026	-
Submitted UWMP to the California State Library (no later than 30 days after adoption)	07/01/2026	-
Submitted UWMP to the cities and county within the supplier’s service area (no later than 30 days after adoption)	07/01/2026	-

Notes:
WSCP – Water Shortage Contingency Plan

This UWMP was adopted by the Board of Directors on June 24, 2026. A copy of the adopted resolution is provided in Appendix J.

10.2 Agency Coordination

The Water Code requires the Suppliers preparing UWMPs to notify any city or county within their service area at least 60 days prior to the public hearing. As shown in Table 10.2, Mesa Water sent a Letter of Notification to the County of Orange and the cities within its service area on April 24, 2026, to state that it was in the process of preparing an updated UWMP. This notice of preparation is included in Appendix I.

Table 10.2 Submittal Table 10-1 Retail: Notification to Cities and Counties

Submittal Table 10-1 Retail: Notification to Cities and Counties Water Code Section 10621(b) and 10642		
City Name	60 Day Notice Drop Down (yes/no)	Notice of Public Hearing Drop Down (yes/no)
Costa Mesa	Yes	Yes
Newport Beach	Yes	Yes
County Name Drop Down List	60 Day Notice Drop Down (yes/no)	Notice of Public Hearing Drop Down (yes/no)
Orange County	Yes	Yes
NOTES:		

Mesa Water’s water supply planning relates to the policies, rules, and regulations of its regional and local water providers. Mesa Water relies on its local groundwater supply from Orange County Water District (OCWD), the agency that manages the Orange County Basin and recycled water from OCWD’s Green Acres Project (GAP) and has the ability to import water from MWDOC as an emergency supply source, if needed. As such, Mesa Water involved the relevant agencies in this 2025 UWMP at various levels of contribution as described below.

Mesa Water’s 2025 UWMP leveraged data and regionally consistent analyses supplied by MWDOC, such as population projections from the Center for Demographic Research at California State University, Fullerton (CDR) and the information quantifying water availability to meet Mesa Water’s projected demands for the next 25 years, in five-year increments. This 2025 UWMP was developed in collaboration with MWDOC’s 2025 UWMP to ensure consistency between the two documents.

As a groundwater producer who relies on supplies from the OCWD-managed Orange County Basin, Mesa Water coordinated the preparation of this 2025 UWMP with OCWD. Several OCWD documents, such as the Groundwater Reliability Plan, Engineer’s Report, and Basin 8-1 Alternative were used to retrieve the required relevant information, including the projections of the amount of groundwater Mesa Water is allowed to extract in the 25-year planning horizon.

The various planning documents of the key agencies that were used to develop this UWMP are listed in Chapter 2.

10.3 Public Participation

Mesa Water encouraged community and public interest involvement in the Plan update through a public hearing and inspection of the draft document on June 24, 2026. As part of the public hearing, Mesa Water discussed adoption of the UWMP, key components of the UWMP and the conclusions that served as the

basis of the UWMP. Copies of the draft 2025 UWMP were placed for public review at the Mesa Water office.

Public hearing notifications were sent to retail agencies and other interested parties. A copy of the Notice of Public Hearing is included in Appendix I.

The hearing was conducted during a regularly scheduled meeting of the Board of Directors.

10.4 UWMP Submittal

The Board of Directors reviewed and approved the 2025 UWMP at its June 24, 2026 meeting, after the public hearing. See Appendix J for the resolution approving the Plan.

By July 1, 2026 Mesa Water's adopted 2025 UWMP was filed with DWR and sent directly to California State Library, County of Orange, and cities within Mesa Water's service area. The submission to DWR was done electronically through the online submittal tool – WUE Data Portal. Mesa Water will make the Plan available for public review on its website no later than 30 days after filing with DWR.

10.5 Amending the Adopted UWMP or WSCP

Based on DWR's review of the UWMP, Mesa Water will make any amendments in its adopted UWMP, as required and directed by DWR and will follow each of the steps for notification, public hearing, adoption, and submittal for the amending the adopted UWMP.

If Mesa Water revises its Water Shortage Contingency Plan (WSCP) after UWMP is approved by DWR, then an electronic copy of the revised WSCP will be submitted to DWR within 30 days of its adoption.

RESOLUTION NO. 1616

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS APPROVING THE ADOPTION OF THE 2025 WATER SHORTAGE CONTINGENCY PLAN

WHEREAS, Mesa Water District (Mesa Water) is a county water district organized and operating pursuant to the provisions of the laws of the State of California (State or California); and

WHEREAS, the California Legislature enacted Assembly Bill 797 (California Water Code Section 10610 *et seq.*, known as the Urban Water Management Planning Act, as amended) during the 1983-1984 Regular Session, which mandates that every supplier providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre feet of water annually, prepare an Urban Water Management Plan and Water Shortage Contingency Plan, the primary objective of which is to ensure the appropriate level of reliability in its water service to meet the needs of its customers during normal, dry and multiple dry years, and to ensure the conservation and efficient use of water; and

WHEREAS, following the end of the most recent drought, the California Legislature modified the Urban Water Management Planning Act in 2018 to include additional water shortage planning requirements; and

WHEREAS, significant amendments to the California Water Code, specifically to California Water Code Section 10632, now mandate new elements to Urban Water Management Plans, including Water Shortage Contingency Plans, which include an annual drought risk assessment, evaluation of State Water Shortage Levels and Statewide water use prohibitions; and

WHEREAS, Mesa Water is an urban water supplier providing water to a population over 100,000; and

WHEREAS, Mesa Water's Urban Water Management Plan (UWMP) shall be periodically reviewed at least once every five years and Mesa Water shall make amendments or changes to the UWMP which are indicated by the review; and

WHEREAS, the UWMP must be updated, adopted, and submitted to the California Department of Water Resources by July 1, 2026; and

WHEREAS, the UWMP must be submitted to the California Department of Water

Resources, the California State Library, and the cities and county within which Mesa Water provides water supplies, and shall be provided with a copy of the UWMP, including the Water Shortage Contingency Plan (Contingency Plan), no later than 30 days after adoption thereof; and

WHEREAS, Mesa Water prepared for public review a draft Contingency Plan as part of the UWMP and held a properly noticed public hearing on June 24, 2026, with respect to the UWMP, including the Contingency Plan included therein, during which Mesa Water received community input on the UWMP and the Contingency Plan, considered the economic impacts of the UWMP and the Contingency Plan, and adopted a method for determining Mesa Water's urban water use target; and

WHEREAS, the Board of Directors (Board) of Mesa Water were furnished with copies of the Contingency Plan as part of their consideration of such Contingency Plan; and

WHEREAS, the Board has determined that the adoption of the Contingency Plan, as part of the UWMP, as provided for under California Water Code Section 10632, at this time, is appropriate.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF MESA WATER DISTRICT DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

Section 1. The foregoing recitals are true and correct and are incorporated herein by this reference.

Section 2. The Board of Directors hereby adopts the Contingency Plan, as part of the UWMP, which the Contingency Plan is incorporated herein by this reference, and will implement the Contingency Plan in accordance with the terms set forth therein.

Section 3. The District Secretary of Mesa Water is hereby directed to submit the Contingency Plan, as part of the UWMP, to the California Department of Water Resources, the California State Library, and any city or county within which Mesa Water provides water supplies, no later than 30 days from the date of adoption hereof, in accordance with California Water Code Section 10644(a)(1).

Section 4. The General Manager, District Secretary and other Mesa Water staff are authorized and directed to take all other and further actions necessary or desirable to carry out the directives of this Resolution.

ADOPTED, SIGNED and APPROVED this 24th day of June 2026 by a roll call vote.

SECTION 1 INTRODUCTION AND WSCP OVERVIEW

The Water Shortage Contingency Plan (WSCP) is a strategic planning document designed to prepare for and respond to water shortages. This WSCP complies with California Water Code (Water Code) Section 10632, which requires that every Urban Water Supplier (Supplier) shall prepare and adopt a WSCP as part of its Urban Water Management Plan (UWMP). This level of detailed planning and preparation is intended to help maintain reliable supplies and reduce the impacts of supply interruptions.

The WSCP is Mesa Water District's (Mesa Water) operating manual that is used to prevent catastrophic service disruptions through proactive, rather than reactive, management. A water shortage, when the water supply available is insufficient to meet the normally expected customer water use at a given point in time, may occur due to a number of reasons, such as drought, climate change, and catastrophic events. This plan provides a structured guide for Mesa Water to deal with water shortages, incorporating prescriptive information and standardized action levels, along with implementation actions in the event of a catastrophic supply interruption. This way, if and when shortage conditions arise, Mesa Water's governing body, its staff, and the public can easily identify and efficiently implement pre-determined steps to manage a water shortage. A well-structured WSCP allows real-time water supply availability assessment and structured steps designed to respond to actual conditions, enabling efficient management of any shortage with predictability and accountability.

The WSCP also describes Mesa Water's procedures for conducting an Annual Water Supply and Demand Assessment (AWSDA) that is required by Water Code Section 10632.1 and is to be submitted to the California Department of Water Resources (DWR) on or before July 1 of each year, or within 14 days of receiving final allocations from the State Water Project (SWP), whichever is later. Mesa Water's 2025 WSCP is included as an appendix to its 2025 UWMP which will be submitted to DWR by July 1, 2026. However, while developed in conjunction with the UWMP, this WSCP is a standalone document and can be amended, as needed, without amending the UWMP. Furthermore, the Water Code does not prohibit a Supplier from taking actions not specified in its WSCP, if needed, without having to formally amend its UWMP or WSCP.

1.1 Water Shortage Contingency Plan Requirements and Organization

The WSCP provides the steps and water shortage response actions to be taken in times of water shortage conditions. The WSCP has prescriptive elements, such as an analysis of water supply reliability; the water shortage response actions for each of the six standard water shortage levels that correspond to water shortage percentages ranging from 10 percent (%) to greater than 50%; an estimate of potential to close supply gap for each measure; protocols and procedures to communicate identified actions for any current or predicted water shortage conditions; procedures for an AWSDA; monitoring and reporting requirements to determine customer compliance; and reevaluation and improvement procedures for evaluating the WSCP.

This WSCP is organized into three main sections, with Section 3 aligned with Water Code Section 16032 requirements:

- **Section 1 Introduction and WSCP Overview** gives an overview of the WSCP fundamentals.
- **Section 2 Background Information** provides a background on Mesa Water's water service area.
- **Section 3 Water Shortage Contingency Preparedness and Response Planning.**
 - » **Section 3.1 Water Supply Reliability Analysis** provides a summary of the water supply analysis and water reliability findings from the 2025 UWMP.
 - » **Section 3.2 Annual Water Supply and Demand Assessment Procedures** provides a description of procedures to conduct and approve the AWSDA.
 - » **Section 3.3 Six Standard Water Shortage Stages** explains the WSCP's six standard water shortage levels corresponding to progressive ranges of up to 10, 20, 30, 40, 50, and more than 50% shortages.
 - » **Section 3.4 Shortage Response Actions** describes the WSCP's shortage response actions that align with the defined shortage levels.
 - » **Section 3.5 Communication Protocols** addresses communication protocols and procedures to inform customers, the public, interested parties, and local, regional, and state governments, regarding any current or predicted shortages and any resulting shortage response actions.
 - » **Section 3.6 Compliance and Enforcement** describes customer compliance, enforcement, appeal, and exemption procedures for triggered shortage response actions.
 - » **Section 3.7 Legal Authorities** describes the legal authorities that enable Mesa Water to implement and enforce its shortage response actions.
 - » **Section 3.8 Financial Consequences of the WSCP** provides a description of the financial consequences of and responses for drought conditions.
 - » **Section 3.9 Monitoring and Reporting** describes monitoring and reporting requirements and procedures that ensure appropriate data is collected, tracked, and analyzed for purposes of monitoring customer compliance and to meet state reporting requirements.
 - » **Section 3.10 WSCP Refinement Procedures** addresses reevaluation and improvement procedures for monitoring and evaluating the functionality of the WSCP.
 - » **Section 3.11 Special Water Feature Distinction** provides a required definition for inclusion in a WSCP per the Water Code.
 - » **Section 3.12 Plan Adoption, Submittal, and Availability** describes the process Mesa Water followed to adopt its WSCP.

1.2 Integration with Other Planning Efforts

As a retail water supplier in Orange County, Mesa Water considered other key entities in the development of this WSCP, including the Municipal Water District of Orange County (MWDOC) (regional wholesale supplier), the Metropolitan Water District of Southern California (MET) (regional wholesaler for Southern California and the direct supplier of imported water to MWDOC), and Orange County Water District (OCWD) (Orange County Groundwater Basin manager and provider of recycled water in North Orange County). As a MWDOC member agency, Mesa Water also developed this WSCP with input from several coordination efforts led by MWDOC.

Some of the key planning and reporting documents that were used to develop this WSCP are:

- **MWDOC's 2025 UWMP** provides the basis for the projections of the imported supply availability over the next 25 years for the District's service area.
- **MWDOC's 2025 WSCP** provides a water supply availability assessment and structured steps designed to respond to actual conditions that will help maintain reliable supplies and reduce the impacts of supply interruptions.
- **MWDOC's 2023 Orange County Water Reliability Study** is a planning document to help guide planning for future water supply reliability for water providers in Orange County and provide input on regional water supply issues for MET.
- **2025 Orange County Water Demand Projection Model Technical Memorandum** is a collaborative effort amongst MWDOC, OCWD, and all retail water suppliers in Orange County that developed water demand projections to produce regionally consistent forecasts across all Orange County water agencies.
- **OCWD's 2025 Groundwater Resilience Plan (GRP)** is an adaptive strategies management plan outlining strategic projects to secure reliable future water supplies in the Orange County Basin.
- **MET's 2025 UWMP** uses assumptions that fall within the plausible futures contemplated in MET's Integrated Water Resources Plan to evaluate MET's future imported water supply reliability.
- **MET's 2025 WSCP** provides a water supply availability assessment and guide for MET's intended actions during water shortage conditions.
- **OCWD's 2023-24 Engineer's Report** provides information on the groundwater conditions, water supply, and basin utilization of the OC Basin.
- **OCWD's 2022 Basin 8-1 Alternative** is an alternative to the Groundwater Sustainability Plan (GSP) for the OC Basin, provides significant information related to sustainable management of the basin in the past and hydrogeology of the basin, including groundwater quality and basin characteristics, and addresses DWR's recommendations to ensure long-term basin sustainability.

SECTION 2 BACKGROUND INFORMATION

Mesa Water is governed by a five-member Board of Directors is located in a community that originated in about 1906. After the Costa Mesa District Merger Law was signed on June 30, 1959, Mesa Water (formerly known as the Costa Mesa County Water District) commenced operations on January 1, 1960 by acquiring the assets and obligations and assumed the responsibility of consolidating the City of Costa Mesa's Water Department, Fairview County Water District, Newport Mesa Irrigation District, and Newport Mesa County Water District.

2.1 Mesa Water Service Area

Mesa Water's water service area covers approximately 16.318 square miles, along the coast of Southern California within the County of Orange and includes most of the City of Costa Mesa, portions of the City of Newport Beach and a small portion of unincorporated Orange County. Mesa Water operates seven wells, including seven clear water wells and two amber wells, two reservoirs with a total storage of 29

million gallons (MG), four metered imported water connections, and 15 emergency interconnections. Mesa Water's distribution system consists of one pressure zone with approximately and manages 328.4-mile of water mains system with approximately 25,032 service connections. A map of Mesa Water's water service area is shown in Figure 1.

Figure 1 Mesa Water Service Area

Although Mesa Water supplements its water supply portfolio with recycled water, the WSCP only applies to its potable water supply. Mesa Water sells and distributes OCWD Green Acres Project (GAP) water to recycled water customers in its service area, as detailed in Section 6.6 of Mesa Water's 2025 UWMP (Mesa Water, 2026). Mesa Water will determine the recycled water demand reduction actions for recycled water based on the availability of supply and to meet necessary wastewater discharge permit requirements.

2.2 Relationship to Wholesalers

The Metropolitan Water District of Southern California: MET is the largest water wholesaler for domestic and municipal uses in California, serving approximately 19 million customers. MET wholesales imported water supplies to 26 member cities and water districts in six Southern California counties. Its service area covers the Southern California coastal plain, extending approximately 200 miles along the Pacific Ocean from the City of Oxnard in the north to the international boundary with Mexico in the south. This encompasses 5,200 square miles and includes portions of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura counties. Approximately 85 % of the population from the aforementioned counties reside within MET's boundaries.

MET is governed by a Board of Directors comprised of 38 appointed individuals with a minimum of one representative from each of MET's 26 member agencies. The allocation of directors and voting rights are determined by each agency's assessed valuation. Each member of the Board shall be entitled to cast one vote for each ten million dollars (\$10,000,000) of assessed valuation of property taxable for district purposes, in accordance with Section 55 of the Metropolitan Water District Act. Directors can be appointed through the chief executive officer of the member agency or by a majority vote of the governing board of the agency. Directors are not compensated by MET for their service.

MET is responsible for importing water into the region through its operation of the Colorado River Aqueduct and its contract with the State of California for SWP supplies. Member agencies receive water from MET through various delivery points and pay for service through a rate structure made up of volumetric rates, capacity charges and readiness to serve charges. Member agencies provide estimates of imported water demand to MET annually in April regarding the amount of water they anticipate they will need to meet their demands for the next five years.

The Municipal Water District of Orange County: In Orange County, MWDOC and the cities of Anaheim, Fullerton, and Santa Ana are MET member agencies that purchase imported water directly from MET. Furthermore, MWDOC purchases both treated potable and untreated water from MET to supplement its retail agencies' local supplies.

Mesa Water is one of MWDOC's 27 member agencies that has the ability to purchase imported water from MWDOC if needed, however meets all of its demands from groundwater. Mesa Water's location within MWDOC's service area is shown in Figure 2.

Figure 2 Regional Location of Mesa Water District and Other MWDOC Member Agencies

2.3 Relationship with Wholesaler Water Shortage Planning

The WSCP is designed to be consistent with MET's Water Surplus and Drought Management (WSDM) Plan, MWDOC's Water Supply Allocation Plan (WSAP), and other emergency planning efforts as described below. MWDOC's WSAP is integral to the WSCP's shortage response strategy in the event that MET or MWDOC determines that supply augmentation (including storage) and lesser demand reduction measures would not be sufficient to meet a projected shortage levels needed to meet demands.

2.3.1 MET Water Surplus and Drought Management Plan

MET evaluates the level of supplies available and existing levels of water in storage to determine the appropriate management stage annually. Each stage is associated with specific resource management actions to avoid extreme shortages to the extent possible and minimize adverse impacts to retail customers should an extreme shortage occur. The sequencing outlined in the WSDM Plan reflects anticipated responses towards MET's existing and expected resource mix.

Surplus stages occur when net annual deliveries can be made to water storage programs. Under the WSDM Plan, there are four surplus management stages that provides a framework for actions to take for

surplus supplies. Deliveries in Diamond Valley Lake (DVL) and in SWP terminal reservoirs continue through each surplus stage provided there is available storage capacity. Withdrawals from DVL for regulatory purposes or to meet seasonal demands may occur in any stage.

The WSDM Plan distinguishes between shortages, severe shortages, and extreme shortages. The differences between each term are listed below:

- **Shortage:** MET can meet full-service demands and partially meet or fully meet interruptible demands using stored water or water transfers as necessary (Stages 1-3).
- **Severe Shortage:** MET can meet full-service demands only by making withdrawals from storage, calling on its water transfers, and possibly calling for extraordinary conservation and reducing deliveries under the Interim Agricultural Water Program (IAWP) (Stages 4-5).
- **Extreme Shortage:** MET must allocate available imported supplies to full-service customers (Stage 6).

There are six shortage management stages to guide resource management activities. These stages are defined by shortfalls in imported supply and water balances in MET's storage programs. When MET must make net withdrawals from storage to meet demands, it is considered to be in a shortage condition. Figure 3 gives a summary of actions under each surplus and shortage stages when an allocation plan is necessary to enforce mandatory cutbacks. The goal of the WSDM plan is to avoid Stage 6, an extreme shortage (MET, 2026b).

Source: MET, 2026.

Figure 3 Resource Stages, Anticipated Actions, and Supply Declarations

MET's Board of Directors adopted a Water Supply Condition Framework in June 2008 to communicate the urgency of the region's water supply situation and the need for further water conservation practices. The

framework has four conditions, each calling increasing levels of conservation. Descriptions for each of the four conditions are listed below:

- **Baseline Water Use Efficiency:** Ongoing conservation, outreach, and recycling programs to achieve permanent reductions in water use and build storage reserves.
- **Condition 1 Water Supply Watch:** Local agency voluntary dry-year conservation measures and use of regional storage reserves.
- **Condition 2 Water Supply Alert:** Regional call for cities, counties, member agencies, and retail water agencies to implement extraordinary conservation through drought ordinances and other measures to mitigate use of storage reserves.
- **Condition 3 Water Supply Allocation:** Implement MET's WSAP.

As noted in Condition 3, should supplies become limited to the point where imported water demands cannot be met, MET will allocate water through the WSAP (MET, 2026a).

2.3.2 MET Water Supply Allocation Plan

MET's imported supplies have been impacted by a number of water supply challenges as noted earlier. In case of extreme water shortage within the MET service area is the implementation of its WSAP.

MET's Board of Directors adopted the WSAP in February 2008 to fairly distribute a limited amount of water supply and applies it through a detailed methodology to reflect a range of local conditions and needs of the region's retail water consumers (MET, 2026a).

The WSAP includes the specific formula for calculating member agency supply allocations and the key implementation elements needed for administering an allocation. MET's WSAP is the foundation for the urban water shortage contingency analysis required under Water Code Section 10632 and is part of MET's 2025 UWMP.

MET's WSAP was developed in consideration of the principles and guidelines in MET's 1999 WSDM Plan with the core objective of creating an equitable "needs-based allocation." The WSAP's formula seeks to balance the impacts of a shortage at the retail level while maintaining equity on the wholesale level for shortages of MET supplies of greater than 50% cutbacks. The formula takes into account a number of factors, such as the impact on retail customers, growth in population, changes in supply conditions, investments in local resources, demand hardening aspects of water conservation savings, recycled water, extraordinary storage and transfer actions, and groundwater imported water needs.

The formula is calculated in three steps: 1) base period calculations, 2) allocation year calculations, and 3) supply allocation calculations. The first two steps involve standard computations, while the third step contains specific methodology developed for the WSAP.

Step 1: Base Period Calculations – The first step in calculating a member agency's water supply allocation is to estimate their water supply and demand using a historical based period with established water supply and delivery data. The base period for each of the different categories of supply and demand is calculated using data from the two most recent non-shortage years.

Step 2: Allocation Year Calculations – The next step in calculating the member agency's water supply allocation is estimating water needs in the allocation year. This is done by adjusting the base period estimates of retail demand for population growth and changes in local supplies.

Step 3: Supply Allocation Calculations – The final step is calculating the water supply allocation for each member agency based on the allocation year water needs identified in Step 2.

In order to implement the WSAP, MET's Board of Directors makes a determination on the level of the regional shortage, based on specific criteria, typically in April. The criteria used by MET includes current levels of storage, estimated water supplies conditions, and projected imported water demands. The allocations, if deemed necessary, go into effect in July of the same year and remain in effect for a 12-month period. The schedule is made at the discretion of the Board of Directors (MET, 2026b).

As demonstrated by the findings in MET's 2025 UWMP both the Water Reliability Assessment and the Drought Risk Assessment (DRA) demonstrate that MET is projecting to be able to mitigate the challenges posed by hydrologic variability, potential climate change, and regulatory risk on its imported supply sources through the significant storage capabilities it has developed over the last two decades, both dry-year and emergency storage (MET, 2026b).

Although MET's 2025 UWMP forecasts that MET will be able to meet projected imported demands throughout the projected period from 2026 to 2050, uncertainty in supply conditions can result in MET needing to implement its WSAP to preserve dry-year storage and curtail demands (MET, 2026b).

2.3.3 MWDOC Water Supply Allocation Plan

To prepare for the potential allocation of imported water supplies from MET, MWDOC worked collaboratively with its 27 retail agencies to develop its own WSAP that was adopted in January 2009 and amended in 2016. The MWDOC WSAP outlines how MWDOC will determine and implement each of its retail agency's allocation during a time of shortage.

The MWDOC WSAP uses a similar method and approach, when reasonable, as that of the MET's WSAP. However, MWDOC's plan remains flexible to use an alternative approach when MET's method produces a significant unintended result for the member agencies. The MWDOC WSAP model follows five basic steps to determine a retail agency's imported supply allocation:

Step 1: Determine Baseline Information – The first step in calculating a water supply allocation is to estimate water supply and demand using a historical base period with established water supply and delivery data. The base period for each of the different categories of demand and supply is calculated using data from the last two non-shortage years.

Step 2: Establish Allocation Year Information – In this step, the model adjusts for each retail agency's water need in the allocation year. This is done by adjusting the base period estimates for increased retail water demand based on population growth and changes in local supplies.

Step 3: Calculate Initial Minimum Allocation Based on MET's Declared Shortage Level – This step sets the initial water supply allocation for each retail agency. After a regional shortage level is established, MWDOC will calculate the initial allocation as a percentage of adjusted base period imported water needs within the model for each retail agency.

Step 4: Apply Allocation Adjustments and Credits in the Areas of Retail Impacts and Conservation – In this step, the model assigns additional water to address disparate impacts at the retail level caused by an across-the-board cut of imported supplies. It also applies a conservation credit given to those agencies that have achieved additional water savings at the retail level as a result of successful implementation of water conservation devices, programs, and rate structures.

Step 5: Sum Total Allocations and Determine Retail Reliability – This is the final step in calculating a retail agency's total allocation for imported supplies. The model sums an agency's total imported allocation with all of the adjustments and credits and then calculates each agency's retail reliability compared to its Allocation Year Retail Demand.

The MWDOC WSAP includes additional measures for plan implementation, including the following (MWDOC, 2016):

- **Appeal Process** – An appeals process to provide retail agencies the opportunity to request a change to their allocation based on new or corrected information. MWDOC anticipates that under most circumstances, a retail agency's appeal will be the basis for an appeal to MET by MWDOC.
- **Melded Allocation Surcharge Structure** – At the end of the allocation year, MWDOC would only charge an allocation surcharge to each retail agency that exceeded their allocation if MWDOC exceeds its total allocation and is required to pay a surcharge to MET. MET enforces allocations to retail agencies through an allocation surcharge to a retail agency that exceeds its total annual allocation at the end of the 12-month allocation period. MWDOC's surcharge would be assessed according to the retail agency's prorated share (acre-feet [AF] over usage) of MWDOC amount with MET. Surcharge funds collected by MET will be invested in its Water Management Fund, which is used to in part to fund expenditures in dry-year conservation and local resource development.
- **Tracking and Reporting Water Usage** – MWDOC will provide each retail agency with water use monthly reports that will compare each retail agency's current cumulative retail usage to their allocation baseline. MWDOC will also provide quarterly reports on its cumulative retail usage versus its allocation baseline.
- **Timeline and Option to Revisit the Plan** – The allocation period will cover 12 consecutive months, and the Regional Shortage Level will be set for the entire allocation period. MWDOC only anticipates calling for allocation when MET declares a shortage; and no later than 30 days from MET's declaration will MWDOC announce allocation to its retail agencies.

SECTION 3 WATER SHORTAGE CONTINGENCY PREPAREDNESS AND RESPONSE PLANNING

Mesa Water's WSCP is a detailed guide of how Mesa Water intends to act in the case of an actual water shortage condition. The WSCP anticipates a water supply shortage and provides pre-planned guidance for managing and mitigating a shortage. Regardless of the reason for the shortage, the WSCP is based on adequate details of demand reduction and supply augmentation measures that are structured to match varying degrees of shortage to ensure the relevant stakeholders understand what to expect during a water shortage situation.

3.1 Water Supply Reliability Analysis

Per Water Code Section 10632 (a)(1), the WSCP shall provide an analysis of water supply reliability conducted pursuant to Water Code Section 10635, and the key issues that may create a shortage condition when looking at Mesa Water's water asset portfolio.

Understanding water supply reliability, factors that could contribute to water supply constraints, availability of alternative supplies, and what effect these have on meeting customer demands provides Mesa Water with a solid basis on which to develop appropriate and feasible response actions in the event of a water shortage. For the 2025 UWMP, Mesa Water worked collaboratively with MWDOC, OCWD, and MWDOC's other retail water agencies to produce long-term projected water use over the next 25 years, in five-year increments, for each agency (MWDOC, 2025).

Mesa Water also conducted a DRA to evaluate a drought period that lasts five consecutive water years starting from the year following when the assessment is conducted (2026-2030). An analysis of both assessments determined that Mesa Water is capable of meeting all customers' demands from 2025 through 2050 for a normal year, a single dry year, and a drought lasting five consecutive years. Mesa Water receives the majority of its water supply from groundwater from the OC Basin, as well as supplemental supplies from local recycled water from the OCWD GAP that adds reliability for non-potable water demand.

As a result, there is no projected shortage condition due to drought that will trigger customer demand reduction actions unless Mesa Water exceeds its pumping capacity and until MWDOC notifies Mesa Water of insufficient imported supplies for supply augmentation in an emergency situation. More information is available in Mesa Water's 2025 UWMP Section 6 and 7 (Mesa Water, 2026).

3.2 Annual Water Supply and Demand Assessment Procedures

Per Water Code Section 10632.1, Mesa Water will conduct an AWSDA pursuant to subdivision (a) of Section 10632 and by July 1st of each year, beginning in 2022, submit an AWSDA with information for anticipated shortage, triggered shortage response actions, compliance and enforcement actions, and communication actions consistent with the Supplier's WSCP.

Mesa Water must include in its WSCP the procedures used for conducting an AWSDA. The AWSDA is a determination of the near-term outlook for supplies and demands and how a perceived shortage may relate to WSCP shortage stage response actions in the current calendar year. This determination is based on information available to Mesa Water at the time of the analysis. Starting in 2022, the AWSDA is due by July 1 of every year.

This section documents the decision-making process required for formal approval of Mesa Water's AWSDA determination of water supply reliability each year and the key data inputs and the methodologies used to evaluate the water system reliability for the coming year, while considering that the year to follow would be considered dry.

3.2.1 Decision-Making Process

The following decision-making process describes the functional steps that Mesa Water will take to formally approve the AWSDA determination of water supply reliability each year.

3.2.1.1 Mesa Water Steps to Approve the AWSDA Determination

The AWSDA will be predicated on the OCWD Basin Production Percentage (BPP) and on MWDOC's AWSDA outcomes.

Mesa Water produces local groundwater from the OC Basin managed by OCWD. The OC Basin is not adjudicated and as such, pumping from the OC Basin is managed through a process that uses financial incentives to encourage Groundwater Producers (Producers) to pump a sustainable amount of water. The framework for the financial incentives is based on establishing the BPP, the percentage of each Producer's total water supply that comes from groundwater pumped from the OC Basin primary aquifer. The BPP is set uniformly for all Producers by the OCWD Board of Directors on an annual basis. Based on the projected water demand and modeled water supply, over the long-term, OCWD anticipates sustainably supporting a BPP of 85 %; however, volumes of groundwater and imported water may vary depending on OCWD's actual BPP projections. A supply reduction that may result from the annual BPP projection will be included in the AWSDA.

Mesa Water pumps from the OCWD primary aquifer to OCWD's allowable BPP. Mesa Water pumps from the lower amber-tinted aquifer to meet the remainder of its potable water demands. The amber-tinted water is treated at the Mesa Water Reliability Facility (MWRF) to remove color and odor. While Mesa Water has the ability to purchase imported water from MWDOC, Mesa Water has not needed to purchase imported water in the recent past. MWDOC surveys its member agencies annually for anticipated water demands and supplies for the upcoming year. MWDOC utilizes this information to plan for the anticipated imported water supplies for the MWDOC service area. This information is then shared and coordinated with MET and is incorporated into their analysis of their service area's annual imported water needs. Based on the year's supply conditions and WSDM actions, MET will present a completed AWSDA for its member agencies' review from which they will then seek Board approval in April of each year. Additionally, MET expects that any triggers or specific shortage response actions that result from the AWSDA will be approved by their Board at that time. Based upon MET's Assessment and taking into consideration information provided to MWDOC through the annual survey, MWDOC will provide an anticipated estimate of imported supplies for Mesa Water to incorporate into the AWSDA.

The Water District designee, will be responsible for approving the AWSDA in years when no shortage is identified and submitted to DWR by July 1. In years where a shortage is identified, the AWSDA will be presented to Board of Directors and submitted to DWR prior to the July 1 deadline.

Figure 4 AWSDA Reporting Timeline

3.2.2 Data and Methodologies

The following paragraphs document the key data inputs and methodologies that are used to evaluate the water system reliability for the coming year, while considering that the year to follow would be considered dry.

3.2.2.1 Assessment Methodology

Mesa Water will evaluate water supply reliability for the current year and one dry year for the purpose of the AWSDA. The AWSDA determination will be based on considerations of unconstrained water demand, local water supplies, MWDOC imported water supplies, planned water use, and infrastructure considerations. The balance between projected in-service area supplies, coupled with MWDOC imported supplies, and anticipated unconstrained demand will be used to determine what, if any, shortage level is expected under the WSCP framework as presented in Figure 5. The WSCP's standard shortage levels are defined in terms of shortage percentages. Shortage percentages will be calculated by dividing the difference between water supplies and unconstrained demand by total unconstrained demand. This calculation will be performed separately for anticipated current year conditions and for assumed dry year conditions.

Figure 5 Water Shortage Contingency Plan AWSDA Framework

3.2.2.2 Locally Applicable Evaluation Criteria

Within Orange County, there are no significant local applicable criteria that directly affect reliability. Through the years, the water agencies in Orange County have made tremendous efforts to integrate their systems to provide flexibility to interchange with different sources of supplies. There are emergency agreements in place to ensure all parts of the County have an adequate supply of water. In the northern part of the County, agencies have the ability to meet a majority of their demands through groundwater with very little limitation, except for the OCWD BPP.

Mesa Water will also continue to monitor emerging supply and demand conditions related to supplemental imported water from MWDOC/MET and take appropriate actions consistent with the flexibility and

adaptiveness inherent to the WSCP. Mesa Water's AWSDA was based on Mesa Water's service area, water sources, water supply reliability, and water use as described in Water Code Section 10631, including available data from state, regional, or local agency population, land use development, and climate change projections within the service area of Mesa Water. Some conditions that affect MWDOC's wholesale supply and demand, such as groundwater replenishment, surface water and local supply production, can differ significantly from earlier projections throughout the year.

If a major earthquake on the San Andreas Fault occurs, it has the potential to damage all three key regional water aqueducts and disrupt imported supplies for up to six months. The region would likely impose a water use reduction ranging from 25-35% until the system is repaired. However, MET has taken proactive steps to handle such disruption, such as constructing DVL, and prepositioning necessary reconstruction resources to quickly recover from such a seismic event, which mitigates potential impacts. DVL, along with other local reservoirs, can store a six to twelve-month supply of emergency water (MET, 2026a).

3.2.2.3 Water Supply

As detailed in Mesa Water's 2025 UWMP, Mesa Water meets its customers' demands with a combination of local groundwater and recycled water. Mesa Water's main source of water supply is groundwater from the OC Basin, with recycled water making up the rest of Mesa Water's water supply portfolio and imported water from MET through MWDOC available in the event of an emergency. In Fiscal Year (FY) 2024-25, Mesa Water relied on 94% groundwater, 6% recycled water, and 0% imported water. It is projected that by 2050, Mesa Water will continue to be 100% reliable on local supplies, with the water supply shifting to approximately 72% groundwater and 28% recycled water. Mesa Water can purchase MET imported water through MWDOC should the need arise (Mesa Water, 2026).

3.2.2.4 Unconstrained Customer Demand

The WSCP and AWSDA define unconstrained demand as expected water use prior to any projected shortage response actions that may be taken under the WSCP. Unconstrained demand is distinguished from observed demand, which may be constrained by preceding, ongoing, or future actions, such as emergency supply allocations during a multi-year drought. WSCP shortage response actions to constrain demand are inherently extraordinary; routine activities such as ongoing conservation programs and regular operational adjustments are not considered as constraints on demands.

Mesa Water's DRA reveals that its supply capabilities are expected to balance anticipated total water use and supply, assuming a five-year consecutive drought from FY 2025-26 through FY 2029-30 (Mesa Water, 2026). This is based on the water demand projection model, in a single dry year, demand is expected to increase by seven % above a normal year (MWDOC, 2025).

For Mesa Water, the five consecutive dry year demand scenario is based on the demand model's multiple dry year methodology. In accordance with the econometric demand model approach used to develop UWMP demand projections, a single hot/dry year was first identified based on weather conditions that produced the greatest demand response. Consecutive dry years were then represented by applying incremental scaling factors to this single hot/dry year demand to account for the compounding effects of persistent warm and dry conditions over time. These scaling factors show long-term relationships between regional water use and multi-year temperature and precipitation deficits and are applied

sequentially to simulate second through fifth consecutive dry years. This approach is consistent with the demand modeling framework summarized in Chapter 7 of Mesa Water's UWMP.

3.2.2.5 Planned Water Use for Current Year Considering Dry Subsequent Year

Water Code Section 10632(a)(2)(B)(ii) requires the AWSDA to determine "current year available supply, considering hydrological and regulatory conditions in the current year and one dry year".

The AWSDA will include two separate estimates of Mesa Water's annual water supply and unconstrained demand using: 1) current year conditions, and 2) assumed dry year conditions. Accordingly, the AWSDA's shortage analysis will present separate sets of findings for the current year and dry year scenarios. The Water Code does not specify the characteristics of a dry year, allowing discretion to the Supplier. Mesa Water will use its discretion to refine and update its assumptions for a dry year scenario in each AWSDA as information becomes available and in accordance with best management practices.

Supply and demand analyses for the single-dry year case were based on conditions affecting the SWP as this supply availability fluctuates the most among MET's, and therefore MWDOC and Mesa Water's, sources of supply. Severe drought conditions in 2021-2022 affected much of the Western United States, including the Colorado River system, which caused its water supply decrease. As conditions worsened, Lake Mead and Lake Powell (the largest storage units in the system), had a combined total storage capacity of 25% in 2022, a significant decrease from 39% in 2021 (MWDOC, 2025).

The Orange County Water Demand Projection Model isolated the impacts that weather and future climate can have on water demand through the use of a statistical model. The impacts of hot/dry weather conditions are reflected as a percentage increase in water demands from the normal year condition. For a single dry year condition (FY 2013-14), the model projects a 7% increase in demand for the OC Basin area where Mesa Water's service area is located (MWDOC, 2025). Detailed information of the model is included in Mesa Water's 2025 UWMP.

Mesa Water has documented that it is 100% reliable for single dry year demands from 2025 through 2050 with a demand increase of 7% from normal demand with significant reserves held by MET, local groundwater supplies, and conservation (Mesa Water, 2026).

3.2.2.6 Infrastructure Considerations

The AWSDA will include consideration of any infrastructure issues that may pertain to near-term water supply reliability, including repairs, construction, and environmental mitigation measures that may temporarily constrain capabilities, as well as any new projects that may add to system capacity. MWDOC closely coordinates with MET and its member agencies, including Mesa Water, on any planned infrastructure work that may impact water supply availability. Throughout each year, MET regularly carries out preventive and corrective maintenance of its facilities within the MWDOC service area that may require shutdowns to inspect and repair pipelines and facilities and support capital improvement projects. These shutdowns involve a high level of planning and coordination between MWDOC, MWDOC's member agencies, and MET to ensure that major portions of the distribution system are not out of service at the same time. Operational flexibility within MET's system and the cooperation of member agencies allow shutdowns to be successfully completed while continuing to meet all system demands.

Specifically for Mesa Water, as of March 2026 there are no foreseen near-term infrastructure issues that would impact supply.

3.2.2.7 Other Factors

For the AWSDA, any known issues related to water quality would be considered for their potential effects on water supply reliability. Mesa Water adheres to the regulatory requirements for groundwater monitoring. As of early 2026, Mesa Water wells are not affected by PFAS and are not part of routine regulatory monitoring for PFAS.

3.3 Six Standard Water Shortage Levels

Per Water Code Section 10632 (a)(3)(A), Mesa Water must include the six standard water shortage levels that represent shortages from the normal reliability as determined in the AWSDA or cross-reference their shortage levels to the standard levels. The shortage levels have been standardized to provide a consistent regional and statewide approach to conveying the relative severity of water supply shortage conditions. This is an outgrowth of the severe statewide drought of 2012-2016, and the widely recognized public communication and state policy uncertainty associated with the many different local definitions of water shortage levels.

The six standard water shortage levels correspond to progressively increasing estimated shortage conditions (up to 10, 20, 30, 40, 50, and greater than 50% shortage compared to the normal reliability condition) and align with the response actions the Supplier would implement to meet the severity of the impending shortages (Table 1).

Table 1 Cross-Reference for Standard vs Supplier Shortage Levels

Submittal Table 8-1: Cross-reference for Standard vs Supplier Shortage Levels Water Code Section 10632(a)(3)(B)			
☒	Check the box if the Supplier uses the Standard six levels of water shortage. Proceed to the next table.		
Standard Shortage Levels	Percent Shortage Range	Suppliers Shortage Levels	Percent Shortage Range
1	Up to 10%		
2	Up to 20%		
3	Up to 30%		
4	Up to 40%		
5	Up to 50%		
6	>50%		
NOTES:			

3.4 Shortage Response Actions

Water Code Section 10632 (a)(4) requires the WSCP to specify shortage response actions that align with the defined shortage levels. Mesa Water has defined specific shortage response actions that align with the defined shortage levels in DWR Tables 8-2 and 8-3 (Appendix A). These shortage response actions were developed with consideration to the system infrastructure and operations changes, supply augmentation responses, customer-class or water use-specific demand reduction initiatives, and increasingly stringent water use prohibitions.

3.4.1 Supply Augmentation

The supply augmentation actions are described in DWR Table 8-2 (Appendix A). These augmentations represent short-term management objectives triggered by the MET's WSDM Plan and do not overlap with the long-term new water supply development or supply reliability enhancement projects. Supply Augmentation is made available to Mesa Water through MWDOC and MET. Mesa Water relies on MET's reliability portfolio of water supply programs including existing water transfers, storage and exchange agreements to supplement gaps in Mesa Water's supply/demand balance. MET has developed significant storage capacity (over 5 million AF) in reservoirs and groundwater banking programs both within and outside of the Southern California region. Additionally, MET can pursue additional water transfer and exchange programs with other water agencies to help mitigate supply/demand imbalances and provide additional dry-year supply sources.

MWDOC, and in turn its retail agencies, including Mesa Water, have access to supply augmentation actions through MET. MET may exercise these actions based on regional need, and in accordance with their WSCP, and may include the use of supplies and storage programs within the Colorado River, SWP, and in-region storage. Mesa Water has the ability to augment its supply by up to 100% by purchasing additional imported water through MWDOC or pumping additional groundwater in the OC Basin; however, both are subject to rate penalties from MWDOC and OCWD, respectively.

3.4.2 Demand Reduction

The demand reduction measures that would be implemented to address shortage levels are described in DWR Table 8-3 (Appendix A). This table indicates which actions align with specific defined shortage levels and estimates the extent to which the actions will reduce the gap between supplies and demands to deliver the outcomes necessary to meet the requirements of a given shortage level. This table also identifies the enforcement action, if any, associated with each demand reduction measure.

3.4.3 Operational Changes

During shortage conditions, operations may be affected by supply augmentation or demand reduction responses. Mesa Water will consider their operational procedures when it completes its AWSDA or as needed to identify changes that can be implemented to address water shortage on a short-term basis, such as temporarily altering maintenance cycles, deferring planned system outages, and adjusting the flow and routing of water through its system to more effectively distribute available supply across the service area.

3.4.4 Additional Mandatory Restrictions

Water Code Section 10632(a)(4)(D) calls for "additional, mandatory prohibitions against specific water use practices that are in addition to state-mandated prohibitions and appropriate to the local conditions" to be included among the WSCP's shortage response actions. Mesa Water will identify additional mandatory restrictions as needed based on the existing Ordinance No. 33, Water Shortage Response Ordinance (Appendix B). Mesa Water intends to update any mandatory restrictions in a subsequently adopted ordinance which will supersede the existing ordinance.

3.4.5 Emergency Response Plan (Hazard Mitigation Plan)

A catastrophic water shortage would be addressed according to the appropriate water shortage level and response actions. It is likely that a catastrophic shortage would immediately trigger Shortage Level 6 and response actions have been put in place to mitigate a catastrophic shortage. In addition, there are several Plans that address catastrophic failures and align with the WSCP, including MET's WSDM and WSAP, the region's Multi-Jurisdictional Hazard Mitigation Plan (MJHMP), and the Water Emergency Response Organization of Orange County (WEROC)'s Emergency Operations Plan (EOP).

3.4.5.1 MET's WSDM and WSAP

MET has comprehensive plans for stages of actions it would undertake to address a catastrophic interruption in water supplies through its WSDM and WSAP. MET also developed an Emergency Storage Requirement to mitigate against potential interruption in water supplies resulting from catastrophic occurrences within the Southern California region, including seismic events along the San Andreas Fault. In addition, MET is working with the state to implement a comprehensive improvement plan to address catastrophic occurrences outside of the Southern California region, such as a maximum probable seismic event in the Sacramento-San Joaquin River Delta that would cause levee failure and disruption of SWP deliveries.

3.4.5.2 Water Emergency Response Organization of Orange County Emergency Operations Plan

In 1983, the Orange County water community identified a need to develop a plan on how agencies would respond effectively to disasters impacting the regional water distribution system. The collective efforts of these agencies resulted in the formation of WEROC to coordinate emergency response on behalf of all Orange County water and wastewater agencies, develop an emergency plan to respond to disasters, and conduct disaster training exercises for the Orange County water community. WEROC, administered by MWDOC, was established through the creation of an indemnification agreement among its member agencies to protect each other against civil liabilities and to facilitate the exchange of resources. WEROC is unique in its ability to provide a single point of contact for the representation of all water and wastewater utilities in Orange County during a disaster. This representation is to the county, state, and federal disaster coordination agencies. Within the Orange County Operational Area, WEROC is the recognized contact for emergency response for the water community, including Mesa Water.

As a member of WEROC, Mesa Water will follow WEROC's EOP in the event of an emergency and coordinate with WEROC to assess damage, initiate repairs, and request and coordinate mutual aid resources in the event that Mesa Water is unable to provide the level of emergency response support required by the situation.

The EOP defines the actions to be taken by WEROC Emergency Operations Center (EOC) staff to reduce the loss of water and wastewater infrastructure; to respond effectively to a disaster; and to coordinate recovery operations in the aftermath of any emergency involving extensive damage to Orange County water and wastewater utilities. The EOP includes activation notification protocol that will be used to contact partner agencies to inform them of the situation, activation status of the EOC, known damage or impacts, or resource needs. The EOP is a standalone document that is reviewed annually and approved by the MWDOC Board every three years.

WEROC is organized on the basis that each member agency is responsible for developing its own EOP in accordance with the California Standardized Emergency Management System (SEMS), National Incident Management System (NIMS), and Public Health Security and Bioterrorism Preparedness and Response Act of 2002 to meet specific emergency needs within its service area.

The WEROC EOC is responsible for assessing the overall condition and status of the Orange County regional water distribution and wastewater collection systems including MET facilities that serve Orange County. The EOC can be activated during an emergency situation resulting from both natural and man-made causes, and can be activated through automatic, manual, or standby for activation.

WEROC recognizes four primary phases of emergency management, which include:

- **Preparedness:** Planning, training, and exercises that are conducted prior to an emergency to support and enhance response to an emergency or disaster.
- **Response:** Activities and programs designed to address the immediate and short-term effects of the onset of an emergency or disaster that helps to reduce effects on water infrastructure and speed recovery. This includes alert and notification, EOC activation, direction and control, and mutual aid.
- **Recovery:** This phase involved restoring systems to normal, in which short-term recovery actions are taken to assess the damage and return vital life-support systems to minimum operating standards, while long-term recovery actions have the potential to continue for many years.
- **Mitigation/Prevention:** These actions prevent the occurrence of an emergency or reduce the area's vulnerability in ways that minimize the adverse impacts of a disaster or emergency.

The EOC Action Plans provide frameworks for EOC staff to respond to different situations with the objectives and steps required to complete them, which will in turn serve the WEROC member agencies. In the event of an emergency that results in a catastrophic water shortage, Mesa Water will declare a water shortage condition of up to Level 3 for the impacted area depending on the severity of the event, and coordination with WEROC is anticipated to begin at Level 4 or greater (WEROC, 2021).

3.4.5.3 Mesa Water District Emergency Response Plan

Mesa Water will also refer to its current American Water Infrastructure Act Risk and Resilience Assessment and Emergency Response Plan in the event of a catastrophic supply interruption.

3.4.6 Seismic Risk Assessment and Mitigation Plan

Per the Water Code Section 10632.5, Suppliers are required to assess seismic risk to water supplies as part of their WSCP. The plan also must include the mitigation plan for the seismic risk(s). Given the great distances that imported supplies travel to reach Orange County, the region is vulnerable to interruptions along hundreds of miles of aqueducts, pipelines and other facilities associated with delivering the supplies to the region. Additionally, the infrastructure in place to deliver supplies is susceptible to damage from earthquakes and other disasters.

In lieu of conducting a seismic risk assessment specific to Mesa Water's 2025 UWMP, Mesa Water has included the most recent regional MJHMP, prepared by MWDOC, as required under the federal Disaster Mitigation Act of 2000 (Public Law 106-390).

MWDOC's MJHMP identifies that the overarching goals of the Hazard Mitigation Plan were the same for all of its member agencies, which include:

- Goal 1: Minimize vulnerabilities of critical infrastructure to minimize damages and loss of life and injury to human life caused by hazards.
- Goal 2: Minimize security risks to water and wastewater infrastructure.
- Goal 3: Minimize interruption to water and wastewater utilities.
- Goal 4: Improve public outreach, awareness, education, and preparedness for hazards in order to increase community resilience.
- Goal 5: Eliminate or minimize wastewater spills and overflows.
- Goal 6: Protect water quality and supply, critical aquatic resources, and habitat to ensure a safe water supply.
- Goal 7: Strengthen Emergency Response Services to ensure preparedness, response, and recovery during any major or multi-hazard event (MWDOC, 2024).

MWDOC's MJHMP evaluates hazards applicable to all jurisdictions in its entire planning area, prioritized based on probability, location, maximum probable extent, and secondary impacts. The identification of hazards is highly dependent on the location of facilities within Mesa Water's jurisdiction and takes into consideration the history of the hazard and associated damage, information provided by agencies specializing in a specific hazard, and relies upon Mesa Water's expertise and knowledge.

Earthquake fault rupture and seismic hazards, including ground shaking and liquefaction, are among the highest ranked hazards to the region as a whole because of its long history of earthquakes, with some resulting in considerable damage. A significant earthquake along one of the major faults could cause substantial casualties, extensive damage to infrastructure, fires, damages and outages of water and wastewater facilities, and other threats to life and property.

Nearly all of Orange County is at risk of moderate to extreme ground shaking, with liquefaction possible throughout much of Orange County but the most extensive liquefaction zones occur in coastal areas. Given the region's seismic activity, there is no doubt that communities within Orange County will continue to experience future earthquake events, and it is a reasonable assumption that a major event will occur within a 30-year timeframe.

The mitigation actions identify the hazard, proposed mitigation action, location/facility, local planning mechanism, risk, cost, timeframe, possible funding sources, status, and status rationale, as applicable. Mitigation actions for Mesa Water for seismic risks may include (MWDOC, 2024):

- Evaluate the installation of seismic valves at critical sites.
- Rehabilitation and replacement program for asbestos cement pipe for earthquake protection.
- Use information gained from seismic hazard mapping to assess risk. Mesa Water uses state-produced Seismic Hazard Maps in planning, and will continue to encourage the public to increase its own hazard awareness via MyHazards.
- Secure aboveground assets in all buildings, booster stations, pressure reducing stations, emergency interties, water systems, and pipelines.
- Encourage public and private buildings to be designed with structural bracing, shutters, and laminated glass in window panes to minimize damage (MWDOC, 2024).

3.4.7 Shortage Response Action Effectiveness

For each specific Shortage Response Action identified in the WSCP, the plan also estimates the extent to which that action will reduce the gap between supplies and demands identified in DWR Tables 8-2 and 8-3 (Appendix A). To the extent feasible, Mesa Water has estimated percentage savings for the chosen suite of shortage response actions, which can be anticipated to deliver the expected outcomes necessary to meet the requirements of a given shortage level.

3.5 Communication Protocols

Timely and effective communication is a key element of the WSCP implementation. In the context of water shortage response, the purpose may be an emergency water shortage situation, such as may result from an earthquake, or a longer-term, non-emergency, shortage condition, such as may result from a drought. In an emergency, Mesa Water will activate the communication protocol detailed in the Emergency Response Plan. In a non-emergency water shortage situation, Mesa Water will implement the communication protocols described below.

Per Water Code Section 10632 (a)(5), Mesa Water has established communication protocols and procedures to inform customers, the public, interested parties, and local, regional, and state governments regarding any current or predicted shortages as determined by the AWSDA described pursuant to Section 10632.1; any shortage response actions triggered or anticipated to be triggered by the AWSDA described pursuant to Section 10632.1; and any other relevant communications.

Non-emergency water shortage communication protocols are focused on communicating the water shortage contingency planning actions that can be derived from the results of the AWSDA, and it would likely trigger based upon the decision-making process in Section 3.2. Prior to water shortage level declaration, Mesa Water will pursue outreach to inform customers of water shortage levels and definitions, targeted water savings for each drought stage, guidelines that customers are to follow during each level, and sources of current information on Mesa Water's supply and demand response status.

The type and degree of communication will vary with each shortage level in order to inform stakeholders of the current water shortage level status and associated shortage response actions, as defined in Section 3.4.1. Predefined communication objectives and tools will ensure Mesa Water's ability to message necessary events and information to ensure compliance with shortage response actions. These communication objectives and tools are summarized in Table 2.

Mesa Water's Public Affairs department will lead public information and outreach efforts in close coordination with other MWDOC and MET. Mesa Water will share information and provide guidance to its customers as well as monitor the customer response and attitude toward both voluntary and mandatory customer response guidelines. Mesa Water's customer outreach is required to successfully achieve targeted water savings during each shortage level.

Table 2 Communication Procedures

Shortage level	Communication Objectives	Communication Tools
1	Compliance with response actions, 10% reduction in water use	Communications at this stage will highlight water efficiency best practices and will include the following communication tools and tactics, but are not limited to: - Information on Mesa Water's website - Information in Mesa Water's newsletter, News on Tap
2	Compliance with response actions, 20% reduction in water use	Communications at this stage will highlight water efficiency best practices and will include the following communication tools and tactics, but are not limited to: - Same as shortage Level 1, in addition to: - Social Media - Educational outreach (via community events or partnerships)
3	Compliance with response actions, 30% reduction in water use	In conjunction with Table 3-1: Water Shortage Contingency Plan Levels, this stage is now a water shortage emergency. Same as shortage Level 1-2, in addition to: - Text and email notification alerts via Mesa Water Notify - Water bill inserts - Direct mail to homes and businesses (postcards or other mailers) - Direct communication with high water users - Press release/ media outreach - Communication coordination with local emergency or water member agencies, including but not limited to WEROC, ACWA, OCWD, MWDOC, for messaging and broader county communications plan - Communication coordination with City of Costa Mesa and other related agencies (Police Dept, Fire Dept, as needed) - Communication coordination with area Hospitals, Newport-Mesa Unified School District, Colleges, Costa Mesa Chamber of Commerce and other key stakeholders and partners
4	Compliance with response actions, 40% reduction in water use	Same as shortage Level 1-3, in addition to: - Radio and/or public service announcements - Increased presence at local events - Publications and handouts

Shortage level	Communication Objectives	Communication Tools
5	Compliance with response actions, 50% reduction in water use	Same as shortage Level 1-4, in addition to: ▪ Neighborhood Canvassing ▪ Neighborhood Meetings or Pop-ups ▪ Advertisements (print and digital) in local publications, key businesses and landmarks ▪ Increased communication coordination with local emergency or water member agencies, including but not limited to WEROC, ACWA, OCWD, MWDOC ▪ Increased communication coordination with City of Costa Mesa and other related agencies (Police Dept, Fire Dept as needed)
6	Compliance with response actions, >50% reduction in water use	Same as shortage Level 1-5, in addition to: ▪ Increased Neighborhood Canvassing ▪ Increased Neighborhood Meetings or Pop-ups

3.6 Compliance and Enforcement

Per the Water Code Section 10632 (a)(6), Mesa Water has defined customer compliance, enforcement, appeal, and exemption procedures for triggered shortage response actions. Communication procedures to ensure customer compliance are described in Section 3.5 Communication Protocols and customer enforcement, appeal, and exemption procedures are defined in the existing Ordinance No. 33, Water Shortage Response Ordinance (Appendix B). Mesa Water intends to update any enforcement procedures in a subsequently adopted ordinance which will supersede the existing ordinance.

3.7 Legal Authorities

Per Water Code Section 10632 (a)(7)(A), Mesa Water has provided a description of the legal authorities that empower Mesa Water to implement and enforce its shortage response in Ordinance No. 33, Water Shortage Response Ordinance (Appendix B).

Per Water Code Section 10632 (a)(7) (B), Mesa Water shall declare a water shortage emergency condition to prevail within the area whenever it finds and determines that the ordinary demands and requirements of water consumers cannot be satisfied without depleting the water supply of the distributor to the extent that there would be insufficient water for human consumption, sanitation, and fire protection.

Per Water Code Section 10632 (a)(7)(C), Mesa Water shall coordinate with any city or county within which it provides water supply services for the possible proclamation of a local emergency under California Government Code, California Emergency Services Act (Article 2, Section 8558). Table 3 identifies the contacts for all cities or counties for which the Supplier provides service in the WSCP, along with developed coordination protocols, can facilitate compliance with this section of the Water Code in the event of a local emergency as defined in subpart (c) of Government Code Section 8558.

Table 3 Agency Contacts and Coordination Protocols

Contact	Agency	Coordination Protocols
Public Works Director	Orange County Public Works Department	Phone/email
City Manager	City of Costa Mesa	Phone/email
City Manager	City of Newport Beach	Phone/email

3.8 Financial Consequences of WSCP

Per Water Code Section 10632(a)(8), Suppliers must include a description of the overall anticipated financial consequences to the Supplier of implementing the WSCP. This description must include potential reductions in revenue and increased expenses associated with implementation of the shortage response actions. This should be coupled with an identification of the anticipated mitigation actions needed to address these financial impacts.

During a catastrophic interruption of water supplies, prolonged drought, or water shortage of any kind, Mesa Water will experience a reduction in revenue due to reduced water sales. Throughout this period of time, expenditures may increase or decrease with varying circumstances. Expenditures may increase in the event of significant damage to the water system, resulting in emergency repairs. Expenditures may also decrease as less water is pumped through the system, resulting in lower power costs. Water shortage mitigation actions will also impact revenues and require additional costs for drought response activities such as increased staff costs for tracking, reporting, and communications.

Mesa Water receives water revenue from a service charge and a commodity charge based on consumption. The service charge recovers costs associated with providing water to the serviced property. The service charge does not vary with consumption, and the commodity charge is based on water usage. Rates have been designed to recover the full cost of water service in the charges. Therefore, the total cost of purchasing water would decrease as the usage or sale of water decreases. In the event of a drought emergency, Mesa Water will impose excessive water use penalties on its customers, which may include additional costs associated with reduced water revenue, staff time taken for penalty enforcement, and advertising the excessive use penalties. The excessive water use penalties are further described in Ordinance No. 33, Water Shortage Contingency Response Ordinance (Appendix B).

However, there are significant fixed costs associated with maintaining a minimal level of service. Mesa Water will monitor projected revenues and expenditures should an extreme shortage and a large reduction in water sales occur for an extended period of time. To overcome these potential revenue losses and/or expenditure impacts, Mesa Water may use reserves. If necessary, Mesa Water may reduce expenditures by delaying implementation of its Capital Improvement Program and equipment purchases to reallocate funds to cover the cost of operations and critical maintenance, adjust the work force, implement a drought surcharge, and/or make adjustments to its water rate structure.

Based on current water rates, a volumetric cutback of 50% and above of water sales may lead to a range of reductions in revenues. The impacts to revenues will depend on a proportionate reduction in variable costs related to supply, pumping, and treatment for the specific shortage event. Mesa Water has reserve funding to mitigate a short-term water shortage situation.

3.9 Monitoring and Reporting

Per Water Code Section 10632(a)(9), Mesa Water is required to provide a description of the monitoring and reporting requirements and procedures that have been implemented to ensure appropriate data is collected, tracked, and analyzed for purposes of monitoring customer compliance and to meet state reporting requirements.

Monitoring and reporting key water use metrics is fundamental to water supply planning and management. Monitoring is also essential in times of water shortage to ensure that the response actions are achieving their intended water use reduction purposes, or if improvements or new actions need to be considered (see Section 3.10). Monitoring for customer compliance tracking is also useful in enforcement actions.

Under normal water supply conditions, potable water production figures are recorded monthly. Monthly reports are prepared and monitored. This data will be used to measure the effectiveness of any water shortage contingency level that may be implemented. Mesa Water has installed endpoints on the meters with the largest use to allow Mesa Water and the customers to see real time water use in 15-minute intervals. This data will facilitate Mesa Water's understanding of the effectiveness of conservation measures. As levels of water shortage are declared by MET and MWDOC, Mesa Water will follow implementation of those levels as appropriate based on Mesa Water's risk profile provided in UWMP Chapter 6 and continue to monitor water demand levels. When MET calls for extraordinary conservation, MET's Drought Program Officer will coordinate public information activities with MWDOC and monitor the effectiveness of ongoing conservation programs.

Mesa Water will participate in monthly member agency manager meetings with both MWDOC and OCWD to monitor and discuss monthly water allocation charts. This will enable Mesa Water to be aware of imported and groundwater use on a timely basis as a result of specific actions taken responding to Mesa Water's WSCP.

3.10 WSCP Refinement Procedures

Per Water Code Section 10632 (a)(10), Mesa Water must provide reevaluation and improvement procedures for systematically monitoring and evaluating the functionality of the water shortage contingency plan in order to ensure shortage risk tolerance is adequate and appropriate water shortage mitigation strategies are implemented as needed.

Mesa Water's WSCP is prepared and implemented as an adaptive management plan. Mesa Water will use the monitoring and reporting process defined in section 3.9 to refine the WSCP. In addition, if certain procedural refinements or new actions are identified by Mesa Water staff, or suggested by customers or other interested parties, Mesa Water will evaluate their effectiveness, incorporate them into the WSCP, and implement them quickly at the appropriate water shortage level.

It is envisioned that the WSCP will be periodically re-evaluated to ensure that its shortage risk tolerance is adequate and the shortage response actions are effective and up to date based on lessons learned from implementing the WSCP. The WSCP will be revised and updated during the UWMP update cycle to incorporate updated and new information. For example, new supply augmentation actions will be added, and actions that are no longer applicable for reasons such as program expiration will be removed. However, if revisions to the WSCP are warranted before the UWMP is updated, the WSCP will be updated

outside of the UWMP update cycle. In the course of preparing the AWSDA each year, Mesa Water staff will consider the functionality of the overall WSCP and will prepare recommendations for Mesa Water's Board of Directors if changes are found to be needed.

3.11 Special Water Feature Distinction

Per Water Code Section 10632 (b), Mesa Water has defined water features that are artificially supplied with water, including ponds, lakes, waterfalls, and fountains, separately from swimming pools and spas, as defined in subdivision (a) of Section 115921 of the Health and Safety Code, in Ordinance No. 33, Water Shortage Response Ordinance (Appendix B).

3.12 Plan Adoption, Submittal, and Availability

Per Water Code Section 10632 (a)(c), Mesa Water provided notice of the availability of the Public Review Draft 2025 UWMP and 2025 WSCP and notice of the public hearing to consider adoption of the WSCP. The Public Review Drafts of the 2025 UWMP and the 2025 WSCP were posted prominently on Mesa Water's [website](#) in advance of the public hearing on June 24, 2026. Copies of the Draft WSCP were also made available for public inspection at Mesa Water's Headquarters and public hearing notifications were published in local newspapers. A copy of the published Notice of Public Hearing is included in Appendix C.

Mesa Water held the public hearing for the Draft 2025 UWMP and Draft WSCP on June 24, 2026, at Mesa Water's Board meeting. Mesa Water's Board reviewed and approved the 2025 UWMP and the WSCP at its June 24, 2026 meeting after the public hearing. See Appendix D for the resolution approving the WSCP.

By July 1, 2026, Mesa Water's adopted 2025 UWMP and WSCP was filed with DWR, California State Library, and the County of Orange. Mesa Water will make the WSCP available for public review on its website no later than 30 days after filing with DWR. Based on DWR's review of the WSCP, Mesa Water will make any amendments to its adopted WSCP, as required and directed by DWR.

If Mesa Water revises its WSCP after UWMP is approved by DWR, then an electronic copy of the revised WSCP will be submitted to DWR within 30 days of its adoption.

			(AF)		
Add additional rows as needed					
0	Landscape - Prohibit certain types of landscape irrigation		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Watering or irrigation of nonfunctional turf (NFT) on State and local government properties, commercial, industrial and institutional owned landscapes, homeowners' associations common area landscapes, and local government facilities in disadvantaged communities (DAC) is prohibited. See Note 1 below.	No
0	Landscape - Other landscape restriction or prohibition		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Irrigation During Rain Events: The application of potable water to outdoor landscapes during and up to forty-eight (48) hours after measurable rainfall is prohibited.	Yes
0	Landscape - Prohibit certain types of landscape irrigation		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Irrigated Medians: The use of potable water to irrigate ornamental turf on public street medians is prohibited.	Yes
0	Landscape - Restrict or prohibit runoff from landscape irrigation		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Excessive Water Flow or Runoff: No person shall cause or allow watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive runoff from the property. Additionally, to the extent prohibited by any Statewide statute, or regulation adopted by any State agency with jurisdiction to adopt such regulations, including, but no limited to, the State Water Resources Control Board, no person shall cause or allow water to flow or runoff their property onto adjacent property, non-irrigated areas, private and public walkways, driveways, roadways, gutters or ditches, parking lots, or structures.	Yes
0	Other - Prohibit use of potable water for washing hard surfaces		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Washing Down Hard or Paved Surfaces: Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a fully functioning, positive self-closing water shut-off device, a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom.	Yes
0	Water Features - Restrict water use for decorative water features, such as fountains		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Re-circulating Water Required for Water Fountains and Decorative Water Features: Operating a water fountain or other decorative water feature that does not use re-circulated water is prohibited.	Yes
0	Other - Require automatic shut of hoses		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Limits on Washing Vehicles: Using water to wash or clean a vehicle, including but not limited to any automobile, truck, van, bus, motorcycle, boat or trailer, whether motorized or not is prohibited, except by use of a hand-held bucket or similar container or a hand-held hose equipped with a fully functioning, positive self-closing water shut-off nozzle or device that causes it to cease dispensing water immediately when not in use. This subsection does not apply to any commercial car washing facility.	Yes
0	Other		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Installation of Single Pass Cooling Systems: Installation of single pass cooling systems is prohibited in buildings requesting new water service from Mesa Water District.	Yes
0	CII - Other CII restriction or prohibition		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	No Installation of Non-re-circulating in Commercial Car Wash and Laundry Systems: Installation of non-re-circulating water systems is prohibited in new commercial conveyor car wash and new commercial laundry systems.	Yes
0	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water		On-going Long Term-Conservation Savings Measure. Not applicable to Water Shortage Contingency Plan quantifiable savings.	Commercial Car Wash Systems: All commercial conveyor car wash systems must utilize re-circulating water systems or must secure a waiver of this requirement from Mesa Water District.	Yes

Submittal Table 8-3 Retail: Demand Reduction Actions Water Code Section 10632(a)(4)(B) and (E)					
Yes	Is the Supplier completing this table using the standard six levels? (yes/no)				
Shortage Level	Demand Reduction Actions Drop down list These are the only categories that will be accepted by the WUEdata online submittal tool. Select those that apply. 		Volume or Percentage Drop down	Shortage Gap Reduction Value (May be a range)		
			(AF)		
1	Landscape - Limit landscape irrigation to specific times	Percentage	5%	Limits on Watering Hours: Watering or irrigating of lawn, landscape, or other vegetated area with potable water is prohibited between the hours of 8:00 a.m. and 5:00 p.m. Pacific Standard Time on any day. Hand-held watering cans, buckets, or similar containers reasonably used to convey water for irrigation purposes are not subject to these time restrictions. Similarly, a hand-held hose equipped with a fully functioning, positive self-closing water shut-off nozzle or device may be used during the otherwise restricted period. If necessary, and for very short periods of time for the express purpose of adjusting or repairing it, one may operate an irrigation system during the otherwise restricted period.	Yes
1	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of five (5) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
1	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within ninety-six (96) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
2	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of four (4) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
2	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within seventy-two (72) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
3	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of three (3) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
3	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within forty-eight (48) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
3	Water Features - Restrict water use for decorative water features, such as fountains	Percentage	2%	Limits on Filling Ornamental Fountains, Lakes, and Ponds: Filling or re-filling ornamental fountains, lakes, and ponds is prohibited, except to the extent needed to sustain aquatic life, provided that such animals have been actively managed within the water feature prior to declaration of a supply shortage level under this Conservation Program.	Yes
4	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of two (2) days per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes

Submittal Table 8-3 Retail: Demand Reduction Actions Water Code Section 10632(a)(4)(B) and (E)					
Yes	Is the Supplier completing this table using the standard six levels? (yes/no)				
Shortage Level	Demand Reduction Actions Drop down list These are the only categories that will be accepted by the WUEdata online submittal tool. Select those that apply.	How much is this going to reduce the shortage gap?		Additional Explanation or Reference (OPTIONAL)	Penalty, Charge, or Other Enforcement? For Retail Suppliers Only Drop Down List
		Volume or Percentage Drop down	Shortage Gap Reduction Value (May be a range)		
			(AF)		
4	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	Percentage	3%	Obligation to Fix Leaks, Breaks or Malfunctions: All leaks, breaks, or other malfunctions in the water user's plumbing or distribution system must be repaired within twenty-four (24) hours of notification by Mesa Water District, or turned off, unless other arrangements are made with Mesa Water District.	Yes
5	Landscape - Limit landscape irrigation to specific days	Percentage	10%	Designated Watering Days: Watering or irrigating of lawn, landscape, or other vegetated area is limited up to a maximum of one (1) day per week on a schedule established and posted by Mesa Water District by a Resolution of the Board of Directors. This provision does not apply to watering or irrigating by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system, and then only while under the supervision of a competent person.	Yes
5	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water	Percentage	3%	Car Washing at Commercial Facilities Only: Washing of motor vehicles, trailers, boats, aircraft and other types of mobile equipment shall be done only at a commercial car wash with water recycling facilities. No restrictions apply where the health, safety, and welfare of the public is contingent upon frequent vehicle cleaning, such as with refuse trucks and vehicles used to transport food and perishables.	Yes
5	Other water feature or swimming pool restriction	Percentage	2%	No Initial Filling or Re-Filling of Swimming Pools & Spas: Filling and Re-Filling of residential swimming pools or outdoor spas with water is prohibited.	Yes
6	Landscape - Prohibit all landscape irrigation	Percentage	10%	No Watering or Irrigating: Watering or irrigating of lawn, landscape, or other vegetated area is prohibited. This restriction does not apply to the following categories of use: Maintenance of vegetation, including trees and shrubs, that are watered using a hand-held bucket or similar container, hand-held hose equipped with a positive self-closing water shut-off nozzle or device; Maintenance of existing landscape necessary for fire protection; Maintenance of existing landscape for soil erosion control; Maintenance of plant materials identified to be rare or essential to the well-being of protected species. Maintenance of landscape within active public parks and playing fields, day care centers, golf course greens, and school grounds, provided that such irrigation does not exceed a maximum of two (2) days per week according to the schedule established in Section 8(b)(1) and time restrictions in Section 6(a); Actively irrigated environmental mitigation projects.	Yes
DWR NOTES: Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Submittal Table 2-3.					
NOTES: Note 1: NFT irrigation requirements begin January 1, 2027 for State and local government properties, January 1, 2028 for commercial, industrial and institutional owned landscapes, January 1, 2029 for homeowners' associations common area landscapes, and January 1, 2031 for local government properties in disadvantaged communities (DAC).					

APPENDIX B

ORDINANCE NO. 33, WATER SHORTAGE RESPONSE ORDINANCE

Below is the weblink to the current ordinance (last accessed on April 17, 2026)

<https://www.mesawater.org/save-water/conservation-requirements>

APPENDIX C

NOTICE OF PUBLIC HEARING (PENDING)

APPENDIX D

ADOPTED WSCP RESOLUTION (PENDING)

*Dedicated to
Satisfying our Community's
Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Calvin Hsu, CPA, Chief Financial Officer
DATE: June 24, 2026
SUBJECT: Public Hearing Regarding the Proposed Collection of Capital Charges By Way of the Office of the Orange County Treasurer-Tax Collector

RECOMMENDATION

- a. Conduct public hearing;
- b. Review and discuss Resolution No. 1617;
- c. Adopt Resolution No. 1617 Determining Compliance with Procedural Requirements, Making Findings, Authorizing Collection of Mesa Water Fiscal Year 2026/27 Capital Charges By Way of the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process and Taking Related Actions; and
- d. Accept Mesa Water District's Updated Secretary's Report Listing the Capital Charge Property Tax Roll for Fiscal Year 2026-2027.

STRATEGIC PLAN

Goal #1: Provide an abundant, local, reliable and safe water supply.
Goal #2: Perpetually renew and improve our infrastructure.
Goal #3: Be financially responsible and transparent.
Goal #6: Provide excellent customer service.

PRIOR BOARD ACTION/DISCUSSION

At its April 13, 2022 meeting, the Board of Directors (Board) adopted Resolution No. 1565 Supplementing Resolution No. 1560 Concerning the Collection of the Capital Charge By Way of the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process and Taking Related Actions; and accepted Mesa Water District's Updated Secretary's Report Listing the Capital Charge Property Tax Roll for Fiscal Year 2022-2023.

At its June 14, 2023 meeting, the Board accepted Mesa Water District's Updated Secretary's Report Listing the Capital Charge Property Tax Roll for Fiscal Year 2023-2024.

At its July 26, 2023 meeting, the Board adopted Resolution No. 1582 Determining Compliance with Procedural Requirements, Making Findings, Authorizing Collection of Mesa Water Fiscal Year 2023/24 Capital Charge By Way of the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process and Taking Related Actions.

At its June 12, 2024 meeting, the Board adopted Resolution No. 1597 Determining Compliance with Procedural Requirements, Making Findings, Authorizing Collection of Mesa Water Fiscal Year 2024/25 Capital Charge By Way of the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process and Taking Related Actions; and accepted Mesa Water District's Updated Secretary's Report Listing the Capital Charge Property Tax Roll for Fiscal Year 2024-2025.

At its June 25, 2025 meeting, the Board adopted Resolution No. 1606 Determining Compliance with Procedural Requirements, Making Findings, Authorizing Collection of Mesa Water Fiscal Year

2025/26 Capital Charge By Way of the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process and Taking Related Actions; and accepted Mesa Water District's Updated Secretary's Report Listing the Capital Charge Property Tax Roll for Fiscal Year 2025-2026

DISCUSSION

On an annual basis, the County of Orange requires that the Board approve a resolution authorizing the collection of the Capital Charge through the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process.

In addition, the Board needs to approve the Updated Secretary's Report (Attachment C) to communicate what amount should be collected by the Office of the Orange County Treasurer-Tax Collector. Mesa Water District (Mesa Water®) must provide the county a Secretary's Report that lists the parcel numbers of each property in the service area, the address and the Capital Charge amount. The Capital Charge is determined based on the meter size of the parcel. Based on the rates approved by the Board at its December 13, 2023 meeting, approximately \$11.5MM will be transferred to the property tax roll in the Property Tax Roll Fiscal Year 2026-2027.

A public hearing must be held prior to the Board taking action regarding the proposed collection of capital charges. Before the date of the public hearing, Mesa Water is required to place an advertisement once a week for two weeks in a local newspaper announcing the public hearing.

Staff placed legal advertisements announcing the June 24, 2026 public hearing in the LA Times Daily Pilot on June 6 and June 13, 2026. The same notice was posted on the District's website and kiosk; and at Costa Mesa City Hall.

LEGAL REVIEW

Mesa Water's General Legal Counsel – Atkinson, Andelson, Loya, Ruud & Romo – has confirmed that Mesa Water must provide a resolution on an annual basis to the County of Orange authorizing the collection of the Capital Charge through the property tax roll.

Staff recommends that the Board adopt Resolution No. 1617 Determining Compliance with Procedural Requirements, Making Findings, Authorizing Collection of Mesa Water Fiscal Year 2026/27 Capital Charges By Way of the Office of the Orange County Treasurer-Tax Collector and County Property Tax Roll Process and Taking Related Actions.

FINANCIAL IMPACT

Based upon current projections, proceeding with the timetable and implementing the rate adjustment as outlined above will result in continuing to meet the Board's fiscal policy goals for a strong AAA rating, days cash, cash on hand and debt coverage, while achieving the Board's Capital Improvement Program.

RESOLUTION NO. 1617

RESOLUTION OF THE MESA WATER DISTRICT BOARD OF DIRECTORS DETERMINING COMPLIANCE WITH PROCEDURAL REQUIREMENTS, MAKING FINDINGS, AUTHORIZING COLLECTION OF MESA WATER FISCAL YEAR 2026/27 CAPITAL CHARGES BY WAY OF THE OFFICE OF THE ORANGE COUNTY TREASURER-TAX COLLECTOR AND COUNTY PROPERTY TAX ROLL PROCESS, AND TAKING RELATED ACTIONS

WHEREAS, Mesa Water District (Mesa Water) is a county water district organized and operating pursuant to the provisions of the laws of the State of California (State or California); and

WHEREAS, Mesa Water has authority to set and collect rates, fees and charges for water and water service that it provides pursuant to the provisions of California Water Code (Water Code) Sections 31000, 31001, 31007, 31024 and 31025; and

WHEREAS, pursuant to Section 5470 *et seq.* of the California Health & Safety Code (Health & Safety Code) Mesa Water is authorized to establish and collect certain water rates and charges on the County of Orange (County) property tax roll through the Office of the Orange County Treasurer-Tax Collector; and

WHEREAS, the Board of Directors (Board) of Mesa Water District has previously adopted and updated its "Policy Concerning Rate Change Proceedings" (Policy) in order to provide directives, guidance and policies for changes in Mesa Water's water and water service rates, fees and charges under the provisions of State law, and to provide assistance for implementation of such requirements; and

WHEREAS, the Board has previously adopted Resolution No. 1584 determining compliance with the procedural requirements, making findings, adopting certain rates and charges, and taking related actions, which Resolution No. 1584 was adopted on December 13, 2023, and which Resolution No. 1584 is incorporated herein by this reference; and

WHEREAS, the Board has previously undertaken proceedings and provided direction for the establishment of certain rates and charges, specifically the Capital Charge component thereof (Capital Charge(s)), to be collected on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector and a noticed public hearing was held concerning such collection method as required by State law and as further described herein; and

WHEREAS, written notice of the referenced public hearing, the proposal to collect such capital charge on the County property tax roll through the Office of the Orange County

Treasurer-Tax Collector has been provided as required under applicable State law, including, but not limited to, Health & Safety Code Section 5473.1 and as further described herein; and

WHEREAS, a report concerning information on the Capital Charges and identifying the properties subject to the Capital Charges has been prepared (hereinafter the Secretary's Report) pursuant to Health & Safety Code Section 5473.1, which Secretary's Report has been made available for public review, made available for review by the Board and is on file with Mesa Water's District Secretary (District Secretary); and

WHEREAS, provisions of California Health and Safety Code Section 5473.1 require a public hearing to be held each year that the Capital Charges are to be collected on the property tax roll and a notice to be published in a local newspaper; and

WHEREAS, the notice of such public hearing was published in the *Daily Pilot* newspaper on June 6th and 13th, 2026, notifying the public of the following: (a) the reason for the public hearing – Method of Collection; (b) the date, time and place of the public hearing; and (c) a summary of the effect of a majority protest; and

WHEREAS, on June 24, 2026, the Board conducted and completed a noticed public hearing held at Mesa Water's main office (Boardroom) located at 1965 Placentia Avenue, Costa Mesa, California pursuant to State law to receive public comments and protests regarding the proposal to collect the capital charge on the County Fiscal Year 2026/27 property tax roll through the Office of the Orange County Treasurer-Tax Collector; and

WHEREAS, the Board desires to make certain findings and determinations in connection with the collection of the Capital Charges on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector; and

WHEREAS, the Board desires to take action to authorize the collection of the Capital Charges on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF MESA WATER DISTRICT DOES HEREBY RESOLVE, DETERMINE AND ORDER AS FOLLOWS:

Section 1. Recitals. The foregoing recitals are true and correct and are incorporated herein by this reference.

Section 2. Provision of Notices, et seq. Pursuant to the requirements of Health & Safety Code Section 5470, and specifically Health & Safety Code Section 5473.1, notice of the proposal to collect the Capital Charges through the County property tax roll through the Office of the Orange County Treasurer-Tax Collector was provided by publication, as referenced above, and posting to Mesa Water's website, its business offices and the City of Costa Mesa City Hall, all as reported to the Board by the District Secretary.

Section 3. Public Hearing. Pursuant to the provisions of Health & Safety Code Section 5473.2, the Board conducted a public hearing on the proposal to collect the Capital Charges through the County property tax roll process as set forth in Section 2 herein. Such public hearing was conducted at Mesa Water's main office (Boardroom) located at 1965 Placentia Avenue, Costa Mesa, California commencing at 4:30 p.m. on June 24, 2026. At the time of the public hearing, the Board considered all protests against the proposal to collect the Capital Charges through the County property tax roll process as set forth in Section 5 hereof. During such public hearing, the Board was presented with the results of all qualified protests to the proposal to collect such Capital Charges through the County property tax roll process and heard and considered all public comments submitted to the Board during such public hearing, and the Board finds and determines that a full and fair hearing was held.

Section 4. No Majority Protest; Findings. Pursuant to the provisions of Health & Safety Code Section 5473.2, the District Secretary has reviewed those protests received by Mesa Water with regard to the proposal to collect the Capital Charges through the County property tax roll process. Any and all protests submitted to Mesa Water concerning such proposal to collect such Capital Charges through the County property tax roll process were received, reviewed for validity, handled and considered. The District Secretary has compared such protests with the Mesa Water customer/property owner list on file with Mesa Water. The District Secretary has provided the Board with a statement of all such valid protests. Based thereon, the Board hereby finds and determines that the proposal to collect the Capital Charges through the County property tax roll process, as described herein, has not been protested by a majority of owners of parcels/customer accounts within Mesa Water's service area.

1. The Board finds and determines that the procedural and notice requirements of Health & Safety Code Section 5473.1 have been complied with.
2. The Capital Charge revenues shall be utilized only for the purposes set out in Health & Safety Code Section 5471.
3. The collection of the Capital Charges through the County property tax roll process will facilitate Mesa Water's cash flow process and assist in stabilizing Mesa Water's revenues and revenue collections.
4. The Secretary's Report has been presented to the Board and is on file with the District Secretary. The Secretary's Report shall form the basis for the collection of the Capital Charges for Fiscal Year 2026/27.

Section 5. Capital Charges and Collection.

1. The Capital Charges shall continue to be charged to applicable parcels within Mesa Water's service area to contribute to the payment of Mesa Water's capital facilities costs.
2. Pursuant to Health & Safety Code Section 5470 *et seq.*, the Board authorizes and directs the collection of the Capital Charges through the County property tax roll process in Fiscal Year 2026/27.
3. The Board authorizes and directs that all filings required by Health & Safety Code Section 5470 *et seq.*, including, but not limited to, Sections 5473.1 and 5473.4, for the imposition and collection of the Capital Charges as set forth herein shall be made.
4. The provisions of Health & Safety Code Sections 5473.5, 5473.7 and 5473.8 shall apply to the Capital Charges and their collection as authorized and directed herein.
5. The provisions of Health & Safety Code Section 5473.10 shall apply to the Capital Charges and their collection as authorized and directed herein. The General Manager is authorized to provide for the collection of penalties applicable thereon with the Office of the Orange County Treasurer-Tax Collector.

Section 6. Schedule of Charges. The Capital Charges will be collected as described in Resolution No. 1584 - Exhibit A, Water Rates and Charge Schedule.

Section 7. Charges Collected with General Taxes. The Board hereby orders for the collection of Capital Charges for Fiscal Year 2026/27 on the tax roll in the same manner, by the same persons and at the same time as, and together with and not separately from, general taxes.

Section 8. Other Actions. Mesa Water's General Manager, District Secretary, other officers, staff and consultants are hereby authorized and directed to take all necessary and appropriate actions as may be required or desirable to carry out the findings and directives of this Resolution.

Section 9. Partial Invalidity; Severability. If any one or more of the findings or directives set forth in this Resolution should be contrary to law, then such findings or directives, or such portions thereof, shall be null and void and shall be deemed separable from the remaining findings and directives or portions thereof and shall in no way affect the validity of this Resolution or the other directives set out herein. The Board hereby declares that it would have adopted this Resolution and each and every other section, paragraph, subdivision, sentence, clause and phrase hereof and would

have authorized and approved the findings or directives set forth herein irrespective of the fact that any one or more sections, paragraphs, subdivisions sentences, clauses or phrases of this Resolution or the application thereof to any person or circumstance may be held to be unconstitutional, unenforceable or invalid.

Section 10. Authority. This Resolution is adopted pursuant to the provisions of Water Code Sections 31000, 31001, 31007, 31024, and 31025 and the provisions of Health & Safety Code Sections 5470 *et seq.*

Section 11. Effective Date. This Resolution shall be effective immediately upon adoption by the Board.

ADOPTED, SIGNED and APPROVED this 24th day of June 2026 by a roll call vote.

RESOLUTION NO. ~~16171606~~

**RESOLUTION OF THE
MESA WATER DISTRICT BOARD OF DIRECTORS
DETERMINING COMPLIANCE WITH PROCEDURAL REQUIREMENTS,
MAKING FINDINGS, AUTHORIZING COLLECTION OF MESA WATER
FISCAL YEAR ~~2025+26~~ 127 CAPITAL CHARGES BY WAY OF
THE OFFICE OF THE ORANGE COUNTY TREASURER-TAX COLLECTOR
AND COUNTY PROPERTY TAX ROLL PROCESS,
AND TAKING RELATED ACTIONS**

WHEREAS, Mesa Water District (Mesa Water) is a county water district organized and operating pursuant to the provisions of the laws of the State of California (State or California); and

WHEREAS, Mesa Water has authority to set and collect rates, fees and charges for water and water service that it provides pursuant to the provisions of California Water Code (Water Code) Sections 31000, 31001, 31007, 31024 and 31025; and

WHEREAS, pursuant to Section 5470 *et seq.* of the California Health & Safety Code (Health & Safety Code) Mesa Water is authorized to establish and collect certain water rates and charges on the County of Orange (County) property tax roll through the Office of the Orange County Treasurer-Tax Collector; and

WHEREAS, the Board of Directors (Board) of Mesa Water District has previously adopted and updated its "Policy Concerning Rate Change Proceedings" (Policy) in order to provide directives, guidance and policies for changes in Mesa Water's water and water service rates, fees and charges under the provisions of State law, and to provide assistance for implementation of such requirements; and

WHEREAS, the Board has previously adopted Resolution No. ~~15841559~~ determining compliance with the procedural requirements, making findings, adopting certain rates and charges, and taking related actions, which Resolution No. ~~15841559~~ was adopted on ~~December 13, 2023~~ January 12, 2022, and which Resolution No. ~~15841559~~ is incorporated herein by this reference; and

WHEREAS, the Board has previously undertaken proceedings and provided direction for the establishment of certain rates and charges, specifically the Capital Charge component thereof (Capital Charge(s)), to be collected on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector and a noticed public hearing was held concerning such collection method as required by State law and as further described herein; and

WHEREAS, written notice of the referenced public hearing, the proposal to collect such capital charge on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector has been provided as required under applicable State law, including, but not limited to, Health & Safety Code Section 5473.1 and as further described herein; and

WHEREAS, a report concerning information on the Capital Charges and identifying the properties subject to the Capital Charges has been prepared (hereinafter the Secretary's Report) pursuant to Health & Safety Code Section 5473.1, which Secretary's Report has been made available for public review, made available for review by the Board and is on file with Mesa Water's District Secretary (District Secretary); and

WHEREAS, provisions of California Health and Safety Code Section 5473.1 require a public hearing to be held each year that the Capital Charges are to be collected on the property tax roll and a notice to be published in a local newspaper; and

WHEREAS, the notice of such public hearing was published in the *Daily Pilot* newspaper on June ~~6th~~^{7th} and 13~~4th~~th, 202~~65~~, notifying the public of the following: (a) the reason for the public hearing – Method of Collection; (b) the date, time and place of the public hearing; and (c) a summary of the effect of a majority protest; and

WHEREAS, on ~~June 24, 2026~~~~June 25, 2025~~, the Board conducted and completed a noticed public hearing held at Mesa Water's main office (Boardroom) located at 1965 Placentia Avenue, Costa Mesa, California pursuant to State law to receive public comments and protests regarding the proposal to collect the capital charge on the County Fiscal Year 20~~25~~/26/~~27~~ property tax roll through the Office of the Orange County Treasurer-Tax Collector; and

WHEREAS, the Board desires to make certain findings and determinations in connection with the collection of the Capital Charges on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector; and

WHEREAS, the Board desires to take action to authorize the collection of the Capital Charges on the County property tax roll through the Office of the Orange County Treasurer-Tax Collector.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF ~~THE~~ MESA WATER DISTRICT DOES HEREBY RESOLVE, DETERMINE, AND ORDER AS FOLLOWS:

Section 1. Recitals. The foregoing recitals are true and correct and are incorporated herein by this reference.

Section 2. Provision of Notices, et seq. Pursuant to the requirements of Health & Safety Code Section 5470, and specifically Health & Safety Code Section 5473.1, notice of the proposal to collect the Capital Charges through the County property tax roll through the Office of the Orange County Treasurer-Tax Collector was provided by publication, as referenced above, and posting to Mesa Water's website, its business offices and the City of

Costa Mesa City Hall, all as reported to the Board by the District Secretary.

Section 3. Public Hearing. Pursuant to the provisions of Health & Safety Code Section 5473.2, the Board conducted a public hearing on the proposal to collect the Capital Charges through the County property tax roll process as set forth in Section 2 herein. Such public hearing was conducted at Mesa Water's main office (Boardroom) located at 1965 Placentia Avenue, Costa Mesa, California commencing at 4:30 p.m. on ~~June 24, 2026~~ June 25, 2025. At the time of the public hearing, the Board considered all protests against the proposal to collect the Capital Charges through the County property tax roll process as set forth in Section 5 hereof. During such public hearing, the Board was presented with the results of all qualified protests to the proposal to collect such Capital Charges through the County property tax roll process and heard and considered all public comments submitted to the Board during such public hearing, and the Board finds and determines that a full and fair hearing was held.

Section 4. No Majority Protest: Findings. Pursuant to the provisions of Health & Safety Code Section 5473.2, the District Secretary has reviewed those protests received by Mesa Water with regard to the proposal to collect the Capital Charges through the County property tax roll process. Any and all protests submitted to Mesa Water concerning such proposal to collect such Capital Charges through the County property tax roll process were received, reviewed for validity, handled and considered. The District Secretary has compared such protests with the Mesa Water customer/property owner list on file with Mesa Water. The District Secretary has provided the Board with a statement of all such valid protests. Based thereon, the Board hereby finds and determines that the proposal to collect the Capital Charges through the County property tax roll process, as described herein, ~~has~~ has not been protested by a majority of owners of parcels/customer accounts within Mesa Water's service area.

1. The Board finds and determines that the procedural and notice requirements of Health & Safety Code Section 5473.1 have been complied with.
2. The Capital Charge revenues shall be utilized only for the purposes set out in Health & Safety Code Section 5471.
3. The collection of the Capital Charges through the County property tax roll process will facilitate Mesa Water's cash flow process and assist in stabilizing Mesa Water's revenues and revenue collections.
4. The Secretary's Report has been presented to the Board and is on file with the District Secretary. The Secretary's Report shall form the basis for the collection of the Capital Charges for Fiscal Year

20~~25~~/26/27.

Section 5. Capital Charges and Collection.

1. The Capital Charges shall continue to be charged to applicable parcels within Mesa Water's service area to contribute to the payment of Mesa Water's capital facilities costs.
2. Pursuant to Health & Safety Code Section 5470 *et seq.*, the Board authorizes and directs the collection of the Capital Charges through the County property tax roll process in Fiscal Year 20~~25~~/26/27.
3. The Board authorizes and directs that all filings required by Health & Safety Code Section 5470 *et seq.*, including, but not limited to, Sections 5473.1 and 5473.4, for the imposition and collection of the Capital Charges as set forth herein shall be made.
4. The provisions of Health & Safety Code Sections 5473.5, 5473.7 and 5473.8 shall apply to the Capital Charges and their collection as authorized and directed herein.
5. The provisions of Health & Safety Code Section 5473.10 shall apply to the Capital Charges and their collection as authorized and directed herein. The General Manager is authorized to provide for the collection of penalties applicable thereon with the Office of the Orange County Treasurer-Tax Collector.

Section 6. Schedule of Charges. The Capital Charges will be collected as described in Resolution No. ~~15841559~~ - Exhibit A, Water Rates and Charge Schedule.

Section 7. Charges Collected with General Taxes. The Board hereby orders for the collection of Capital Charges for Fiscal Year 20~~25~~/26/27 on the tax roll in the same manner, by the same persons and at the same time as, and together with and not separately from, general taxes.

Section 8. Other Actions. Mesa Water's General Manager, District Secretary, other officers, staff, and consultants are hereby authorized and directed to take all necessary and appropriate actions as may be required or desirable to carry out the findings and directives of this Resolution.

Section 9. Partial Invalidity; Severability. If any one or more of the findings or directives set forth in this Resolution should be contrary to law, then such findings or directives, or such portions thereof, shall be null and void and shall be deemed separable from the remaining findings and directives or portions thereof and shall in no way affect the validity of this Resolution or the other directives set out herein. The Board hereby declares that it

would have adopted this Resolution and each and every other section, paragraph, subdivision, sentence, clause and phrase hereof and would have authorized and approved the findings or directives set forth herein irrespective of the fact that any one or more sections, paragraphs, subdivisions sentences, clauses or phrases of this Resolution or the application thereof to any person or circumstance may be held to be unconstitutional, unenforceable or invalid.

Section 10. Authority. This Resolution is adopted pursuant to the provisions of Water Code Sections 31000, 31001, 31007, 31024 and 31025 and the provisions of Health & Safety Code Sections 5470 *et seq.*

Section 11. Effective Date. This Resolution shall be effective immediately upon adoption by the Board.

MEMORANDUM

TO: Board of Directors
FROM: Stacy Taylor, Water Policy Manager
DATE: June 24, 2026
SUBJECT: Federal Advocacy Update

RECOMMENDATION

Receive and file the Federal Advocacy Update.

STRATEGIC PLAN

Goal #7: Actively participate in regional and statewide water issues.

PRIOR BOARD ACTION/DISCUSSION

This item is provided monthly at a Mesa Water District (Mesa Water®) Board of Directors (Board) meeting.

DISCUSSION

Attached are the Federal Advocacy Report and the list of Federal legislation that Mesa Water is tracking. At the Board's June 24, 2026 meeting, Mesa Water staff will provide a verbal report on any actionable, relevant and/or timely issues.

FINANCIAL IMPACT

In Fiscal Year 2026, \$450,000 is budgeted for Water Policy Support Services; \$349,920 has been spent to date.

ATTACHMENTS

Attachment A: Federal Advocacy Report
Attachment B: Federal Legislation Tracker

To: Mesa Water District
From: Van Scoyoc Associates (VSA); Geoff Bowman, Pete Evich, Jessica Flewallen
Date: June 16, 2026
Subject: June 2026 Report

Federal Government Update

The House Appropriations Committee advanced the Energy and Water bill on May 20th, with the bill now waiting to move to the House floor. The bill proposes \$9.7 billion for the Army Corps, a cut of \$660 million from current funding levels, and \$1.86 billion for the Bureau of Reclamation, a \$211 million increase from current funding levels. Within the Bureau of Reclamation funding, \$12 million is proposed for WaterSMART Grants and \$41 million for the Title XVI Water Reclamation and Reuse Program.

On May 21st, the House Appropriations Subcommittee Interior-EPA bill moved out of the subcommittee, and was marked up by the full committee on June 3rd. The bill proposes a 20% cut to the Environmental Protection Agency (EPA) and a 2% increase to the Department of the Interior (DOI). The bill also proposes approximately \$1.192 billion for the Clean Water State Revolving Fund (SRF), \$446 million below the current level but \$1.037 billion above the President's budget request; \$910 million for the Drinking Water SRF, \$215 million below the current level but \$760 million above the President's budget request; \$2.25 million for the Mid & Large Drinking Water System Infrastructure Resilience and Sustainability program, the same as current level; \$72 million for Water Infrastructure Finance and Innovation Act (WIFIA), \$725,000 below the current level; \$5 million for the Water Infrastructure Workforce Investment program, \$400,000 below the current level.

Representative Min did not submit Mesa Water District's Cybersecurity Project or Mainline Valves Replacement Project – Phase 2. VSA will monitor the Senate Interior Appropriations bill for a request from Senator Schiff or Senator Padilla.

EPA Withdraws Biden-era Proposed Rule on PFAS Cleanup

On May 8th, the EPA [withdrew](#) a Biden-era proposed rule clarifying that PFAS and other significantly harmful substances could be subject to cleanup requirements under the Resource Conservation and Recovery Act (RCRA), a hazardous waste law. The agency determined the proposed rule should be withdrawn as it "would have complicated, rather than contributed to, efficient implementation of cleanup at hazardous waste facilities under the RCRA" and stated, "the existing regulations provide the tools necessary to develop protective permit conditions without the need to modify the hazardous waste definition." The EPA also argued the rule was unnecessary, citing existing "omnibus" authority under RCRA that already allows cleanups to be required when needed to protect human health, even for unlisted pollutants.

EPA Holds PFAS Roundtable Event

On May 18th, the EPA held a roundtable to discuss ongoing efforts and announce new actions regarding Per- and Polyfluoroalkyl Substances (PFAS) contamination in drinking water, with EPA Administrator Lee Zeldin and HHS Secretary Robert F. Kennedy Jr. emphasizing the health risks associated with the forever chemicals. At this event, the EPA announced three key initiatives: (1) \$1 billion in Infrastructure Investment and Jobs Act (IIJA) funding through the Emerging Contaminants in Small or Disadvantaged Communities Grant Program to help states and territories support water systems addressing PFAS contamination; (2) a [proposed rule](#) allowing drinking water systems up to two additional years to comply with enforceable maximum contaminant levels for PFOA and PFOS under the National Primary Drinking Water Regulations; and (3) a [proposed rule](#) to rescind federal drinking water regulations for PFHxS, PFNA, GenX (HFPO-DA), and the related Hazard Index mixture, which EPA stated would reduce litigation risk and allow the agency to improve the existing regulatory framework rather than restart the rulemaking process. The roundtable also featured industry leaders discussing technologies for PFAS detection, filtration, destruction, and remediation, as well as challenges related to affordability and workforce training in the water sector. The agency is seeking feedback on both proposed rules until July 20th. A [public hearing](#) to discuss both proposed rules will take place on July 7th.

EPA Launches Permitting Map

On May 6th, the EPA launched the EPA [Permitting Authority Map](#), an interactive map showing users which regulatory agencies have the authority to review and approve permits relating to the agency's permitting programs and environmental statutes. In addition to the agency, many jurisdictions and stakeholders maintain the authority, including states, territories, Tribal nations, and local agencies. The creation of the map falls in line with Pillar 3 of Administrator Zeldin's [Powering the Great American Comeback](#) initiative: Permitting Reform, Cooperative Federalism, and Cross-Agency Partnership.

Letter Sent to Zeldin and Kennedy Regarding Concerns Surrounding Nitrate in Water

On May 5th, 83 environmental, public health, and advocacy groups sent a [letter](#) to the Department of Health & Human Services (HHS) Secretary Robert F. Kennedy Jr. and Environmental Protection Agency (EPA) Administrator Lee Zeldin urging them to take emergency action on nitrate contamination in drinking water tied to industrial agriculture. The letter calls on EPA to act on a Safe Drinking Water Act emergency petition after a recent report from the Environmental Working Group (EWG) found about 20% of Americans' drinking water contains nitrates. Concerns surrounding drinking water containing nitrates include an increased risk of birth defects and various cancers even when water contains concentrations less than the current federal drinking water limit of 10 mg/L.

VSA will keep Mesa Water District apprised as this develops.

Bureau of Reclamation Notice of Funding Opportunities

On May 14th, the Bureau of Reclamation announced the WaterSMART Title XVI Water Reclamation and Reuse Projects, Desalination Construction Projects, and Enhancing Water Resources Projects funding opportunities. The [WaterSMART Title XVI Water Reclamation and Reuse Projects](#) opportunity is used for planning, design, and construction of water recycling and reuse projects for communities in need of drought-resilient water supplies and reduced reliance on vulnerable sources. The [WaterSMART Desalination Construction Projects](#) opportunity can be used for planning, design, and construction of seawater and brackish water desalination facilities to help communities diversify water supplies and improve drought resilience. The [WaterSMART Enhancing Water Resources Projects](#) opportunity provides funding for collaboratively developed, multi-benefit projects that improve water supply reliability and watershed health, including watershed restoration, fish passage, water infrastructure improvements, and conservation efforts.

EPA Submits California Air Pollution Waivers to Congress for Congressional Review

On June 12th, the EPA submitted four California air pollution rule waivers to Congress with the goal of subjecting them to congressional review. Congress plans to use the Congressional Review Act to nullify the waivers by simple majority, but there is an ongoing legal and procedural dispute over whether these waivers are properly subject to the Congressional Review Act. EPA's position is that Congress can review them, but opponents argue that waivers are not "rules" under the CRA. EPA Administrator Lee Zeldin stated, "it is important for EPA to fulfill our statutory obligation to submit these California waivers to Congress for their review pursuant to the law." If the waivers are nullified, automakers would no longer have to comply with climate standards in California and the other states that have adopted California's vehicle-emissions standards.

The four waivers subject to nullification are the Advanced Clean Cars I (ACC I), California's vehicle emissions program that allows the state to impose passenger vehicle standards stricter than federal requirements and promote increasing sales of zero-emission vehicles; Greenhouse Gas Emission Standards for 2009 and Later Model-Year Vehicles, which allows California to enforce its own greenhouse-gas limits for cars and light trucks; Small Off-Road Engine (SORE) Amendments, standards affecting engines used in equipment such as lawn mowers, leaf blowers, and similar small-engine equipment, including requirements that encourage or require a transition to zero-emission equipment; and the Advanced Clean Trucks (ACT) / Heavy-Duty Vehicle Emissions Waiver covering state authority to regulate certain mobile-source emissions beyond federal standards.

VSA will keep Mesa Water District apprised as more information becomes available.

Aubrey Bettencourt Likely to be Nominated for Bureau of Reclamation Commissioner

Several unnamed sources, including a White House official, have reportedly named Aubrey Bettencourt as the expected nominee for Bureau of Reclamation Commissioner. Before her departure in May, Bettencourt was the Chief of the Department of Agriculture's (USDA) Natural Resources Conservation Service. During the first Trump administration, she served as the deputy assistant secretary for water and science at the Department of the Interior. Her resume also

includes Netafim, a drip irrigation technology company; the Almond Alliance; Western United Dairies, where she lead initiatives in groundwater management; and USDA's Farm Service Agency in California as State Executive Director. Currently, Reclamation's acting commissioner is Scott Cameron. What his role would be going forward has not yet been made clear if Bettencourt takes the position.

VSA will keep Mesa Water District apprised as more information becomes available.

California Elections Update

On June 2nd, California held its primary election to determine the two candidates who will advance to the U.S. House of Representatives general election on November 3rd. The table below lists the current representatives for each Orange County district and the two candidates advancing to the general election.

District	Current Representative	Candidates Advancing to General Election*	
40 th	Young Kim (R)	Young Kim (R)	Ken Calvert (R)
45 th	Derek Tran (D)	Derek Tran (D)	Chuong V. Vo (R)
46 th	Lou Correa (D)	Lou Correa (D)	David Pan (R)
47 th	Dave Min (D)	Dave Min (D)	Jenny Rae Le Roux (R)
49 th	Mike Levin (D)	Mike Levin (D)	Armen Kurdian (R)

*As of June 15th, the State considers these results "unofficial", until results are certified in July.

SUPPORT

Water Conservation Rebate Tax Parity Act ([H.R.1871](#), [S.857](#)) Rep. Jared Huffman (D-CA), Sen. John Curtis (R-UT)

Status: House - 03/05/2025 Referred to the House Committee on Ways and Means.

Senate - 03/05/2025 Referred to the Committee on Finance.

Summary: This legislation will amend federal tax law to ensure homeowners do not have to pay income tax when they receive rebates from water utilities for water conservation and water runoff management improvements.

Special District Fairness & Accessibility Act ([H.R.2766](#), [S.2014](#)) Rep. Pat Fallon (R-TX), Sen. John Cornyn (R-TX)

Status: House - Committee on Oversight and Government Reform Ordered to be Reported (Amended) by a vote of 32 - 8

Senate - 06/10/2025 Read twice and referred to the Committee on Homeland Security and Governmental Affairs

Summary: This bill will require special districts to be recognized as local government and be eligible for federal funding.

Low-Income Household Assistance Water Program (LIHWAP) Establishment Act ([H.R.4733](#)) Rep. Eric Sorensen (D-IL)

Status: House - 12/01/2025 Referred to the Subcommittee on Water Resources and Environment

Summary: This bill will direct the Secretary of the Department of Health and Human Services (HHS) and Administrator of the Environmental Protection Agency (EPA) to make permanent the Low-Income Household Assistance Water Program (LIHWAP). This bill will allow HHS to award grants to eligible entities to provide funds to public water systems to assist low-income households in paying for drinking water or wastewater services.

Water Infrastructure Modernization Act (WIMA) ([S.2388](#), [H.R.6075](#)) Sen. Ruben Gallego (D-AZ), Rep. Robert Bresnahan (R-PA)

Status: Senate - 07/23/2025 Referred to the Committee on Environment and Public Works.

House - 11/19/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will provide \$50 million in grant funding for community water systems to purchase and implement new water technologies, including those that can identify water loss, examine pipe integrity, detect leaks, prepare for severe weather, innovate water storage systems, and more.

Water Cybersecurity Enhancement Act of 2025 ([S.1549](#), [H.R.5868](#)) Sen. Ruben Gallego (D-AZ)

Status: Senate - 05/01/2025 Referred to the Committee on Environment and Public Works.

House - 10/28/2025 Referred to the House Committee on Energy and Commerce.

Summary: This bill will extend and expand the Drinking Water Infrastructure Risk and Resilience Program and provide technical assistance and grants to community water systems for training and guidance regarding protecting from and responding to cyberattacks.

WATCH

Regulations from the Executive in Need of Scrutiny (REINS) Act ([H.R. 142](#)) Rep. Kat Cammack (R-FL)

Status: House - 01/03/2025 Referred to the Committee on the Judiciary, and in addition to the Committees on Rules, and the Budget

Summary: This bill will aim to increase accountability and transparency in the federal regulatory process by requiring that any new "major rule" proposed by federal agencies receive approval from both the House and Senate before taking effect.

To eliminate federal funding for the failed California High-Speed Rail project ([H.R. 213](#)) Rep. Kevin Kiley (R-CA)

Status: House - 01/07/2025 Referred to the House Subcommittee on Railroads, Pipelines, and Hazardous Materials.

Summary: This bill will prohibit the use of Federal financial assistance for the California High-Speed Rail development project in the State of California.

Colorado River Basin System Conservation Extension Act ([H.R. 231](#), [S.154](#)) Rep. Harriet Hageman (R-WY), Sen. John Hickenlooper (D-CO)

Status: House - 02/12/2025 Ordered to be Reported (Amended) by Unanimous Consent.
Senate - 06/18/2025 Passed Senate without amendment by Voice Vote.

Summary: This bill will reauthorize the Colorado River System Conservation Pilot Program through fiscal year 2026.

Preserving Choice in Vehicle Purchase Act ([H.R.346](#)) Rep. John Joyce (R-PA)

Status: House - 01/13/2025 Referred to the House Committee on Energy and Commerce.

Summary: This bill will block the U.S. Environmental Agency from giving California a waiver to "limit the sale or use of new motor vehicles with internal combustion engines." It would do so by modifying the waiver process under the Clean Air Act related to state emission control standards for new motor vehicles.

Providing for congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to "National Primary Drinking Water Regulations for Lead and Copper: Improvements (LCRI) ([H.J. Res. 18](#)) Rep. Gary Palmer (R-AL)

Status: House - 01/13/2025 Referred to the House Committee on Energy and Commerce.

Summary: This joint resolution nullifies the rule titled National Primary Drinking Water Regulations for Lead and Copper: Improvements (LCRI), which was submitted by the Environmental Protection Agency on October 30, 2024.

Every Drop Counts Act ([H.R. 338](#)) Rep. Jim Costa (D-CA)

Status: House - 11/19/2025 Subcommittee Hearings Held.

Summary: This bill will expand the Bipartisan Infrastructure Law's Small Storage Program by making it easier for groundwater projects to qualify for funding, increase the amount of water they can store, and stabilize underground aquifers.

Fix Our Forests Act ([H.R.471](#), [S.1462](#)) Rep. Bruce Westerman (R-AR), Sen. John Curtis (R-UT)

Status: House – 01/23/2025 Passed house 279 - 141

Senate - 03/06/2025 Committee on Agriculture, Nutrition, and Forestry Subcommittee on Conservation, Forestry, Natural Resources, and Biotechnology. Hearings held.

Summary: This bill simplifies and expedites environmental reviews for forest management projects, promotes federal, state, tribal, and local collaboration, and deters frivolous litigation that delays essential projects.

Stop the Delta Tunnel Act ([H.R.1311](#)) Rep. Josh Harder (D-CA)

Status: House - 02/13/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will prohibit the Army Corps of Engineers from issuing a federal permit necessary for the State of California to build the Delta Conveyance Project, commonly known as the Delta Tunnel.

Critical Infrastructure Manufacturing Feasibility Act ([H.R.1721](#)) Rep. Mariannette Miller-Meeks (R-IA)

Status: Senate - 04/29/2025 Received in the Senate and Referred to the Committee on Commerce, Science, and Transportation.

Summary: This bill will direct the Secretary of Commerce to conduct a study on the feasibility of manufacturing more critical infrastructure goods in the United States, with a focus on identifying rural communities best suited to support domestic production.

Headwaters Protection Act of 2025 ([H.R.605](#), [S.2701](#)) Rep. Jim Costa (D-CA), Sen. Michael Bennet (D-CO)

Status: House - 02/28/2025 Referred to the Subcommittee on Conservation, Research, and Biotechnology

Senate - 09/03/2025 Referred to the Committee on Agriculture, Nutrition, and Forestry

Summary: This bill reauthorizes the Water Source Protection Program (WSPP) at \$30 million annually from 2024-2028, expands the list of eligible lands and entities, lowers the non-federal match requirement for smaller private sector companies, and reduces bureaucratic hurdles for existing Watershed Restoration Action Plans.

Colorado River Basin System Conservation Extension Act ([S.154](#), [H.R.231](#)) Sen. John Hickenlooper (D-CO), Rep. Harriet Hageman (R-WY)

Status: Senate – 06/16/2025 Passed in Senate.

House – 06/23/2025 Held at the desk.

Summary: This bill will amend the Energy and Water Development and Related Agencies Appropriations Act, 2015, to reauthorize the Colorado River System conservation pilot program.

Improving Atmospheric River Forecasts Act ([S.322](#), [H.R.4302](#)) Sen. Alex Padilla (D-CA)

Status: Senate – 01/29/2025 Referred to Committee on Commerce, Science, and Transportation

House - 07/07/2025 Referred to the House Committee on Science, Space, and Technology.

Summary: This bill will require the National Oceanic and Atmospheric Administration (NOAA) to establish a forecast improvement program within the National Weather Service.

Wildfire Emergency Act of 2025 ([S.350](#)) Sen. Alex Padilla (D-CA)

Status: Senate - 07/17/2025 Referred to the Committee on Agriculture, Nutrition, and Forestry

Summary: This bill will direct the Secretary of Agriculture to select and implement these projects, focusing on reducing the threat of destructive wildfires and assisting communities in increasing their resilience.

Lower Colorado River Multi-Species Conservation Program Amendment Act of 2025 ([H.R.831](#), [S.291](#)) Rep. Ken Calvert (R-CA), Sen. Alex Padilla (D-CA)

Status: House - 03/16/2026 Passed the House.

Senate - 03/17/2026 Received in the Senate.

Summary: This bill will establish an interest-bearing account for the non-Federal contributions to the Lower Colorado River Multi-Species Conservation Program. This will ensure that state contributions to conservation projects in the Lower Colorado River Basin are able to earn interest and grow before being allocated.

Emergency Wildfire Fighting Technology Act ([H.R.836](#)) Rep. David Valadao (R-CA)

Status: House – 02/05/2025 Passed the House

Senate - 02/06/2025 Referred to the Committee on Agriculture, Nutrition, and Forestry.

Summary: This bill will require the U.S. Forest Service and the Department of the Interior to jointly evaluate the use of the Container Aerial Firefighting System to mitigate and suppress wildfires

Disaster Resiliency and Coverage Act of 2025 ([H.R.1105](#)) Rep. Mike Thompson (D-CA)

Status: House - 02/06/2025 Referred to the Subcommittee on Economic Development, Public Buildings, and Emergency Management.

Summary: This bill will provide homeowners in disaster-prone regions with broad incentives to harden their properties against wildfires and other risks.

Water Systems PFAS Liability Protection Act ([H.R.1267](#)) Rep. Marie Gluesenkamp Perez (D-WA)

Status: House - 02/12/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill exempts specified water management entities from liability under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) for releases of certain perfluoroalkyl or polyfluoroalkyl substances, commonly referred to as PFAS.

Aquatic Biodiversity Preservation Act of 2025 ([H.R. 1332](#)) Rep. Dave Min (D-CA)

Status: House - 02/13/2025 Referred to the House Committee on Natural Resources.

Summary: This bill will establish a program within the National Oceanic and Atmospheric Administration (NOAA) to collect data on at-risk, aquatic species.

Midnight Rules Relief Act ([H.R.77](#), [S.164](#)) Rep. Andy Biggs (R-AZ), Sen. Ron Johnson (R-WI)

Status: House – 02/12/2025 Passed in House by the Yeas and Nays: 212 - 208

Senate - 02/13/2025 Referred to the Committee on Homeland Security and Governmental Affairs

Summary: This bill will allow lawmakers to roll back multiple federal regulations in one Congressional Review Act resolution, as currently CRA resolutions can only address one rule at a time.

Coastal Commission Accountability Act ([H.R. 1874](#)) Rep. Kevin Kiley (R-CA)

Status: House - 03/05/2025 Referred to the House Committee on Natural Resources.

Summary: This bill will amend the Coastal Zone Management Act (CZMA) to expedite important coastal activities, including national security initiatives, critical infrastructure development, and disaster mitigation and recovery efforts.

Federally Integrated Species Health (FISH) Act ([H.R.1894](#)) Rep. Ken Calvert (R-CA)

Status: House - 03/06/2025 Referred to the House Committee on Natural Resources.

Summary: This bill will eliminate the National Oceanic and Atmospheric Administration (NOAA) Fisheries' oversight role in regulating salmon and other fish under the Endangered Species Act and designate the Fish and Wildlife Life Service (FWS) as the sole regulatory authority.

Promoting Efficient Review for Modern Infrastructure Today (PERMIT) Act ([H.R.2093](#), [H.R.3898](#)) Rep. Ken Calvert (R-CA), Rep. Mike Collins (R-GA)

Status: House - 03/14/2025 Referred to the House Committee on Transportation and Infrastructure.

Senate - 12/15/2025 Received in the Senate and Referred to the Committee on Environment and Public Works.

Summary: This bill will reform the Clean Water Act to streamline permitting, reduce regulatory delays, provide greater certainty for developers, and redefine "navigable waters."

Protect the West Act of 2025 ([S.670](#)/[H.R.1459](#)) Sen. Michael Bennet (D-CO), Rep. Jason Crow (D-CO)

Status: Senate - 02/20/2025 Referred to the Committee on Agriculture, Nutrition, and Forestry.

House - 03/20/2025 Referred to the Subcommittee on Conservation, Research, and Biotechnology

Summary: This bill will provide an investment of \$60 billion to establish an Outdoor Restoration Fund for restoration and resilience projects across the West.

Preventing Our Next Natural Disaster Act ([H.R.403](#)) Rep. Eric Swalwell (D-CA)

Status: House - 01/15/2025 Referred to the Subcommittee on Economic Development, Public Buildings, and Emergency Management

Summary: This bill will modify the Building Resilient Infrastructure and Communities (BRIC) grant program to increase FEMA's Disaster Relief fund and increases funding accessibility for community planning, environmental justice communities, and impoverished communities.

Ending Major Borderland Environmental Ruin from Wildfires (EMBER) Act ([H.R.2026](#)) Rep. Ken Calvert (R-CA)

Status: House - 04/04/2025 Referred to the Subcommittee on Forestry and Horticulture.

Summary: This bill will ensure better assessment, prevention, and help for communities to manage wildfires. It focuses on modernizing wildfire policies, bolstering resilience, and enhancing restoration efforts.

Endangered Species Act (ESA) Amendments Act ([H.R.1897](#)) Rep. Bruce Westerman (R-AR)

Status: House – 04/20/2026 H. Res. 1189 provides for one motion to recommit on the bill

Summary: This bill will amend the Endangered Species Act of 1973 to improve conservation of resources and wildlife, protect endangered species, and streamline permitting.

Urban Waters Federal Partnership Act ([H.R.2401](#)) Rep. Greg Stanton (D-AZ)

Status: House - 03/27/2025 Referred to the Committee on Transportation and Infrastructure, and to the Committees on Natural Resources, and Appropriations.

Summary: This bill will formally authorize the Urban Waters Federal Partnership Program, which supports improvements to waterways and urban renewal.

Water Intelligence, Security, and Cyber (Water ISAC) Threat Protection Act ([H.R. 2344/S. 1118](#)) Rep. Jan Schakowsky (D-IL), Sen. Ed Markey (D-MA)

Status: House - 03/25/2025 Referred to the Subcommittee on Water Resources and Environment.

Senate - 03/25/2025 Referred to the Committee on Environment and Public Works.

Summary: This bill will increase drinking water and wastewater system threat preparedness and resilience by directing the EPA to establish a program to offset costs to water systems and increase support.

Providing for congressional disapproval of a rule published by the Fish and Wildlife Service relating to “Endangered and Threatened Wildlife and Plants” ([H.J.Res.78](#)) Rep. Doug LaMalfa (R-CA)

Status: House - 05/01/2025 Passed with a voice vote of 216 - 195

Senate - 05/05/2025 Received in the Senate.

Summary: This bill provides congressional disapproval for a rule from the Fish and Wildlife Service which lists the San Francisco Bay-Delta distinct population segment (DPS) of longfin smelt as an endangered species under the Endangered Species Act

Water Risk and Resilience Reorganization ([H.R.2594](#)) Rep. Eric Crawford (R-AR)

Status: House - 04/02/2025 Referred to the Committee on Transportation and Infrastructure, and to the Committee on Energy and Commerce.

Summary: This bill will establish a Water Risk and Resilience Organization to support modifications and implementation for water systems to meet risk and resilience requirements.

Forest Service Accountability Act ([H.R.1762](#), [S.1061](#)) Rep. Ryan Zinke (R-MT), Sen. Mike Lee (R-UT)

Status: House - 03/28/2025 Referred to the Subcommittee on Forestry and Horticulture.

Senate - 03/13/2025 Read twice and referred to the Committee on Agriculture, Nutrition, and Forestry

Summary: This bill will make the Chief of the Forest Service a Presidentially appointed position

Safeguard American Voter Eligibility (SAVE) Act ([H.R.22](#), [S.128](#)) Rep. Chip Roy (R-TX), Sen. Mike Lee (R-UT)

Status: House – 04/10/2025 Passed by the Yeas and Nays: 220 – 208

Senate - 01/16/2025 Referred to the Committee on Rules and Administration.

Summary: This bill will amend the National Voter Registration Act of 1993 to people provide proof of citizenship when registering to vote in a federal election. The documents for proof of citizenship include a passport, REAL ID, birth certificate, or a military ID.

Restoring WIFIA Eligibility Act ([H.R.3035](#), [S.1760](#)) Rep. Jim Costa (D-CA), Sen. John Curtis (R-UT)

Status: House - 04/28/2025 Referred to the Committee on Transportation and Infrastructure, and the Committee on Energy and Commerce.

Senate - 05/14/2025 Referred to the Committee on the Budget.

Summary: This bill will amend the Water Infrastructure Finance and Innovation Act of 2014 (WIFIA) to clarify that federally-owned infrastructure projects managed by non-federal entities are eligible for WIFIA funding.

Help Hoover Dam Act ([S.1570](#), [H.R.3158](#)) Sen. Catherine Cortez Masto (D-NV), Re. Susie Lee (D-NV)

Status: Senate - 05/01/2025 Referred to the Committee on Energy and Natural Resources.

House - 05/01/2025 Referred to the House Committee on Natural Resources.

Summary: This bill will preserve Hoover Dam as an affordable energy source and strengthen the Southwest's electrical grid by giving the Bureau of Reclamation the authority to use "stranded funds" currently in the Colorado River Dam Fund to pay for operation, maintenance, and replacement projects at Hoover Dam.

Investing In Our Communities Act ([H.R.1255](#)) Rep. David Kustoff (R-TN)

Status: House - 02/12/2025 Referred to the House Committee on Ways and Means.

Summary: This bill will restore tax-exempt advance refunding for municipal bonds so state and local governments can more efficiently invest in projects throughout their communities.

Technical Fix for the State Response to Contaminants Program ([S.1324](#)) Sen. Jeanne Shaheen (D-NH)

Status: Senate - 04/08/2025 Referred to the Committee on Environment and Public Works.

Summary: This bill will provide flexibility for states to use funding from the Bipartisan Infrastructure Law for PFAS in small and disadvantaged communities to assist private well owners.

Wastewater Infrastructure Pollution Prevention and Environmental Safety (WIPPES) Act ([S.1092](#)/[H.R.2269](#)) Sen. Jeff Merkley (D-OR), Rep. Lisa McClain (R-MI)

Status: Senate – 03/22/2026 Passed the Senate

House – 06/23/2025 Passed the House by voice vote.

Summary: This bill will require products with significant potential to be flushed to be labeled with "Do Not Flush" notices to protect pipe infrastructure.

Modification of the Aquifer Recharge Flexibility Act ([H.R.331](#), [S.1254](#)) Rep. Russ Fulcher (R-ID)

Status: House – 05/13/2025 Passed the House.

Senate - 05/14/2025 Received in the Senate and Read twice and referred to the Committee on Energy and Natural Resources.

Summary: This bill will allow holders of existing right-of-way grants to use them for aquifer recharge without needing additional authorization from the Secretary of the Interior.

To provide technical and financial assistance for groundwater recharge, aquifer storage, and water source substitution projects ([H.R.337](#)) Rep. Jim Costa (D-CA)

Status: House - 01/13/2025 Referred to the House Committee on Natural Resources.

Summary: This bill will modify the Infrastructure Investment and Jobs Act to allow unobligated funds for groundwater recharge projects, aquifer storage and recovery projects, and water source substitution for aquifer protection projects.

Agriculture Export Promotion Act of 2025 ([H.R.1086](#)) Rep. Dan Newhouse (R-WA)

Status: House - 02/06/2025 Referred to the House Committee on Agriculture.

Summary: This bill will extend and increase funding for the Market Access Program (MAP) and Foreign Market Development (FMD) Program through Fiscal Year 2029.

Fair Access to Agriculture Disaster Programs Act ([H.R.2156](#)/[S.984](#)) Rep. Jimmy Panetta (D-CA), Sen. Alex Padilla

Status: House - 04/04/2025 Referred to the Subcommittee on General Farm Commodities, Risk Management, and Credit.

Senate - 03/12/2025 Referred to the Committee on Agriculture, Nutrition, and Forestry.

Summary: This bill will expand eligibility for USDA disaster assistance programs by waiving gross income limitations.

Advancing Water Reuse Act ([H.R.2940](#)) Rep. Darin LaHood (R-IL)

Status: House - 04/17/2025 Referred to the House Committee on Ways and Means.

Summary: This bill will catalyze the use of recycled water by manufacturers, data centers, and other industrial entities.

Disaster Related Extension of Deadlines Act ([H.R.1491](#)/[S.1438](#)) Rep. Gregory Murphy (R-NC), Sen. Raphael Warnock (D-GA)

Status: House: 12/26/2025 Became Public Law No: 119-64.

Senate - 04/10/2025 Read twice and referred to the Committee on Finance.

Summary: This bill will ensure that natural disaster victims have sufficient time to claim tax refunds and credits, even when their filing deadlines are extended due to a disaster.

Proven Forest Management Act of 2025 ([H.R.179](#)) Rep. Tom McClintock (R-CA)

Status: House - 01/08/2026 Reported (Amended) by the Committee on Natural Resources

Summary: This bill will expand forest management practices that have proven successful in reducing wildfire risks and promoting forest health, improving forest resiliency.

Filing Relief for Natural Disasters Act ([H.R.517](#)/[S.132](#)) Rep. David Kustoff (R-TN), Sen. Catherine Cortez Masto (D-NV)

Status: House: 7/24/2025 Became law

Senate - 01/16/2025 Referred to the Committee on Finance.

Summary: This bill will grant the IRS the authority to postpone federal tax filing deadlines for taxpayers affected by state-declared disasters and states of emergency.

FEMA Independence Act ([H.R. 2308](#)) Rep. Jared Moskowitz (D-FL)

Status: House - 03/24/2025 Referred to the Subcommittee on Emergency Management and Technology.

Summary: This bill will remove FEMA from the Department of Homeland Security (DHS) and restore it as an independent, Cabinet-level agency.

Water Affordability, Transparency, Equity, and Reliability (WATER) Act of 2023 ([S.1730](#)) Sen. Bernard Sanders (I-VT)

Status: Senate - 05/13/2025 Referred to the Committee on Environment and Public Works.

Summary: This bill will assist communities in securing access to clean and reliable drinking water. This bill also contains provisions to combat PFAS and provide grants for low-income communities struggling with unaffordable water bills.

Veterans Exposed to Toxic PFAS Act ([H.R.3639](#)) Rep. Michael Lawler (R-NY)

Status: House - 06/06/2025 Referred to the Subcommittee on Health.

Summary: This bill provides eligibility for Department of Veterans Affairs hospital care and medical services to veterans and their family members (including those in utero) who have specified conditions and resided at a military installation where individuals were exposed to perfluoroalkyl and polyfluoroalkyl substances, commonly known as PFAS.

National Prescribed Fire Act of 2025 ([H.R.3889](#), [S.2015](#)) Rep. Kim Schrier (D-WA), Sen. Ron Wyden (D-OR)

Status: House - 06/10/2025 Referred to the Committee on Natural Resources, and in addition to the Committees on Agriculture, and Energy and Commerce.

Senate - 12/17/2025 Committee on Energy and Natural Resources. Ordered to be reported with an amendment in the nature of a substitute favorably.

Summary: This bill will increase funding for Forest Service and DOI for prescribed burns, establish a program for implementation of prescribed burns, establish a program for workforce development, and facilitate coordination between land managers and air quality agencies to alter prescribed burn practices to reduce catastrophic smoke events in the summer.

PFAS National Drinking Water Standard Act of 2025 ([H.R.4168](#)) Rep. Brian Fitzpatrick (R-PA)

Status: House - 06/26/2025 Referred to the House Committee on Energy and Commerce.

Summary: This bill will codify the EPA's final PFAS National Primary Drinking Water Regulation, establishing enforceable maximum contaminant levels (MCLs) for six of the most hazardous PFAS chemicals, including PFOA and PFOS, in public drinking water systems.

WILTR Act of 2025 ([H.R.4181](#)) Rep. Darrell Issa (R-CA)

Status: House - 06/26/2025 Referred to the House Committee on Ways and Means.

Summary: This bill will incentivize wildfire prevention infrastructure and landowner preparedness through targeted tax relief.

The Healthy Drinking Water Affordability Act (Healthy H2O Act) ([H.R.4721](#), [S.2436](#)) Rep. David Rouzer (R-NC), Sen. Tammy Baldwin (D-WI)

Status: House - 07/23/2025 Referred to the House Committee on Agriculture.

Senate - 07/24/2025 Read twice and referred to the Committee on Agriculture, Nutrition, and Forestry.

Summary: This bill will provide grants through the U.S. Department of Agriculture for water quality testing and to purchase and install point-of-entry water filtration systems to remove contaminants from drinking water.

Snow Water Supply Forecasting Program Reauthorization Act of 2025 ([S.2437](#)) Sen. John Hickenlooper (D-CO)

Status: Senate - 03/17/2026 Committee on Energy and Natural Resources Subcommittee on Water and Power. Hearings held.

Summary: This bill will reauthorize the Bureau of Reclamation's Snow Water Supply Forecasting Program which provides grants to advance emerging snow monitoring technology that improve water supply predictions.

Fixing Emergency Management for Americans (FEMA) Act ([H.R.4669](#)) Rep. Sam Graves (R-MO)

Status: House - 09/03/2025 Ordered to be Reported (Amended) by the Yeas and Nays: 57 - 3

Summary: This bill will authorize and improve the Federal Emergency Management Agency and reform Federal disaster mitigation, preparedness, response, and recovery.

Water Infrastructure Resiliency Act ([H.R.5513](#)) Rep. Vince Fong (R-CA)

Status: House - 09/20/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will clarify eligible uses under the Clean Water State Revolving Fund (CWSRF) to include modern software tools for the modernization of infrastructure.

Water Infrastructure Resilience and Sustainability Act ([H.R.5566](#)) Rep. Salud Carbajal (D-CA)

Status: House - 12/01/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will fund upgrades to drinking water, wastewater, and stormwater infrastructure to make them more resilient against threats by reauthorizing the following programs: Drinking Water System Infrastructure Resilience and Sustainability Program, Midsize and Large Drinking Water System Infrastructure Resilience and Sustainability Program, and the Clean Water Infrastructure Resiliency and Sustainability Program.

Water Infrastructure Subcontractor and Taxpayer Protection Act ([H.R.1285](#), [S.570](#)) Rep. Mike Bost (R-IL), Se. Mark Kelly (D-AZ)

Status: House - 02/13/2025 Referred to the Subcommittee on Water Resources and Environment.

Senate - 02/13/2025 Read twice and referred to the Committee on Environment and Public Works.

Summary: Requires prime contractors on federally funded water infrastructure projects to pay subcontractors promptly and ensures federal oversight to prevent misuse of taxpayer funds.

Water Resources Technical Assistance Review Act ([H.R.3427](#)) Rep. David Taylor (R-OH)

Status: House – 09/15/2025 Passed out of the House.

Senate - 09/16/2025 Received in the Senate and Read twice and referred to the Committee on Environment and Public Works.

Summary: Requires the Army Corps of Engineers to review, assess, and report on the effectiveness of its technical assistance programs for water resources projects, ensuring they meet the needs of local communities and stakeholders.

Golden Mussel Eradication and Control Act of 2025 ([H.R.3717](#)) Rep. Josh Harder (D-CA)

Status: House - 06/04/2025 Referred to the Committee on Transportation and Infrastructure and the Committee on Natural Resources

Summary: Directs federal efforts to control and eradicate invasive golden mussel populations in U.S. waterways to protect ecosystems and infrastructure.

Regional Leadership in Wildland Fire Research Act ([H.R.6154](#), [S.647](#)) Rep. Dave Min (D-CA), Sen. Ben Ray Lujan (D-NM)

Status: House - 05/20/2026 Referred to the Subcommittee on Conservation, Research, and Biotechnology.

Senate - 02/20/2025 Referred to the Committee on Commerce, Science, and Transportation.

Summary: This bill will establish research centers at higher education institutions across the country to support wildfire research and develop new technologies to enhance wildfire preparedness.

Standardizing Permitting and Expediting Economic Development (SPEED) Act ([H.R.4776](#)) Rep. Bruce Westerman (R-AR)

Status: House – 12/18/2025 Passed by the Yeas and Nays: 221 – 196.

Senate - 12/18/2025 Referred to the Committee on Environment and Public Works.

Summary: This bill will narrow the scope of federal actions which trigger a NEPA review by redefining the term “major federal actions” and will also expedite the review process.

Water Infrastructure Resilience and Sustainability Act ([S.3590](#), [H.R.5566](#)) Sen. Lisa Blunt Rochester (D-DE), Rep. Salud Carbajal (D-CA)

Status: Senate - 01/07/2026 Read twice and referred to the Committee on Environment and Public Works

House - 12/01/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will reauthorize the Midsize and Large Drinking Water System Infrastructure Resilience Program, Drinking Water System Infrastructure Resilience and Sustainability Program, and Clean Water Infrastructure Resiliency and Sustainability Program for five years.

Unincorporated Partnerships for Grant Resources, Assistance, and Drinking Water Enhancements (UPGRADE) Act ([S. 3465](#)) Sen. Lisa Blunt Rochester (D-DE)

Status: Senate - 12/11/2025 Referred to the Committee on Environment and Public Works

Summary: This bill will amend the Safe Drinking Water Act to reauthorize the EPA's Small, Underserved, and Disadvantaged Communities grant program through 2031 and make unincorporated communities eligible for funding to improve access to clean water.

PFAS Research and Development Reauthorization Act ([H.R. 6667](#)) Rep. Chris Pappas (D-NH)

Status: House - 02/02/2026 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will extend EPA's authority and funding to conduct research and development on PFAS after its prior authorization expired.

No Taxation on PFAS Remediation Act ([H.R. 6669](#)) Rep. Chris Pappas (D-NH)

Status: House - 12/11/2025 Referred to the House Committee on Ways and Means.

Summary: This bill will amend the Internal Revenue Code to ensure that reimbursements or rebates used for PFAS cleanup are excluded from gross income for tax purposes.

Clean Water Standards for PFAS Act ([H.R. 6668](#)) Rep. Chris Pappas (D-NH)

Status: House - 02/02/2026 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will require the EPA to establish effluent limitation guidelines and water quality criteria for PFAS discharges under the Federal Water Pollution Control Act, setting regulatory deadlines for industry controls.

Community Protection and Wildfire Resilience Act ([S.3609](#), [H.R.582](#)) Sen. Alex Padilla (D-CA), Rep. Jared Huffman (D-CA)

Status: Senate - 01/08/2026 Referred to the Committee on Homeland Security and Governmental Affairs.

House - 01/21/2025 Referred to the Committee on Science, Space, and Technology, and in addition to the Committees on Natural Resources, and Agriculture

Summary: This bill will create a new federal grant program to invest \$1 billion annually to help communities develop and implement Community Protection and Wildfire Resilience Plans

Making Our Communities Resilient through Enhancing Water for Agriculture, Technology, the Environment, and Residences (MORE WATER) Act ([S.3738](#)) Sen. Alex Padilla (D-CA)

Status: Senate - 03/17/2026 Committee on Energy and Natural Resources Subcommittee on Water and Power. Hearings held.

Summary: This bill will reauthorize the Bureau of Reclamation (BOR) large-scale recycled water program, providing federal grants for up to 25% of the cost of these recycling projects, and would create a new federal grant program to help repair California's water delivery system.

Growing Resilient Operations from Water Savings and Municipal- Agricultural Reciprocally-beneficial Transactions (GROW SMART) Act ([S.3737](#)) Sen. Alex Padilla (D-CA)

Status: Senate - 03/17/2026 Committee on Energy and Natural Resources Subcommittee on Water and Power. Hearings held.

Summary: This bill will authorize \$5 million per year for seven years for the BOR to fund the development of voluntary agricultural partnerships with municipal, industrial, and commercial entities and the design of innovative water-saving projects.

Water Infrastructure Finance and Innovation Act Amendments of 2025 ([H.R.6229](#)) Rep. Kim Schrier (D-WA)

Status: House - 11/22/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will reauthorize the Water Infrastructure Finance and Innovation Act of 2014 through 2029, lowers minimum project sizes for small communities, allows up to 55-year loan maturities, and promotes collaborative project delivery.

Western Wildfire Support Act ([S.91](#), [H.R.5782](#)) Rep. Joe Neguse (D-CO),

Status: Senate - 02/04/2026 Committee on Energy and Natural Resources. Ordered to be reported with an amendment in the nature of a substitute favorably.

House - 12/01/2025 Referred to the Subcommittee on Economic Development, Public Buildings, and Emergency Management.

Summary: This bill will provide comprehensive resources to prevent wildfires, enhance firefighting efforts, and support communities impacted by year-round wildfire seasons.

To require the Secretary of Agriculture to carry out activities to suppress wildfires ([H.R.178](#)) Rep. Tom McClintock (R-CA)

Status: House - 01/08/2026 Reported (Amended) by the Committee on Natural Resources.

Summary: This bill will direct the Secretary of Agriculture to carry out wildfire suppression and to not suppress wildfire fighting efforts.

Advanced Capabilities for Emergency Response Operations (ACERO) Act ([H.R.3930](#)) Rep. Vince Fong (R-CA)

Status: House - 06/11/2025 Ordered to be Reported in the Nature of a Substitute by the Yeas and Nays: 34 - 0.

Senate - 02/24/2026 Received in the Senate and referred to the Committee on Commerce, Science, and Transportation.

Summary: This bill will authorize the ACERO program which conducts research and development activities regarding aerial response to wildfires using uncrewed aircraft systems (UAS) and other advanced aviation technologies.

Save Our Sequoias Act ([H.R.2709](#)) Rep. Vince Fong (R-CA)

Status: House - 03/12/2026 Placed on the Union Calendar, Calendar No. 466

Senate - 03/17/2026 Received in the Senate and Read twice and referred to the Committee on Energy and Natural Resources.

Summary: This bill will establish a set of programs to improve the health and resiliency of giant sequoias, including shared stewardship agreements, emergency response, reforestation strategies, and collaborative restoration grants.

Snow Water Supply Forecasting Reauthorization Act ([H.R.3857](#)) Rep. Jeff Hurd (R-CO)

Status: Senate - 03/17/2026 Committee on Energy and Natural Resources Subcommittee on Water and Power. Hearings held.

Summary: This bill will reauthorize and modify the Bureau of Reclamation's Snow Water Supply Forecasting Program through FY2031.

Water Infrastructure Resilience and Sustainability Act ([S.3590](#), [H.R.5566](#)) Sen. Lisa Blunt Rochester (D-DE), Rep. Salud Carbajal (D-CA)

Status: Senate - 01/07/2026 Read twice and referred to the Committee on Environment and Public Works.

House - 12/01/2025 Referred to the Subcommittee on Water Resources and Environment.

Summary: This bill will amend the Federal Water Pollution Control Act to reauthorize the clean water infrastructure resiliency and sustainability program, and amend the Safe Drinking Water Act to reauthorize drinking water resilience and midsize/large system sustainability programs.

*Dedicated to
Satisfying our Community's
Water Needs*

MEMORANDUM

TO: Board of Directors
FROM: Stacy Taylor, Water Policy Manager
DATE: June 24, 2026
SUBJECT: State Advocacy Update

RECOMMENDATION

Receive and file the State Advocacy Update.

STRATEGIC PLAN

Goal #7: Actively participate in regional and statewide water issues.

PRIOR BOARD ACTION/DISCUSSION

This item is provided monthly at a Mesa Water District (Mesa Water®) Board of Directors (Board) meeting.

DISCUSSION

Attached are the State Advocacy Report and the list of State legislation that Mesa Water is tracking. At the Board's June 24, 2026 meeting, Mesa Water staff will provide a verbal report on any actionable, relevant and/or timely issues.

FINANCIAL IMPACT

In Fiscal Year 2026, \$450,000 is budgeted for Water Policy Support Services; \$349,920 has been spent to date.

ATTACHMENTS

Attachment A: State Advocacy Report
Attachment B: State Legislative Status Report

June 16, 2026

To: Mesa Water District

From: Adam Quiñonez and Dennis Albiani, California Advocates

Subject: June 2026 Monthly Report

Late on June 15, the Legislature approved AB 109, the primary budget bill for the 2026-27 fiscal year, meeting the constitutional deadline for budget passage and establishing the Legislature's official spending plan. The measure reflects a negotiated agreement between the Assembly and Senate and serves as the framework for final budget negotiations with Governor Newsom.

The budget totals approximately \$355.9 billion, including roughly \$253 billion from the General Fund, and maintains more than \$36 billion in reserves and budget stabilization accounts. Legislative leaders characterize the proposal as a balanced approach that protects core services, responds to anticipated federal funding reductions, preserves local government programs, and improves the state's long-term fiscal position through a combination of spending restraint, reserve-building, and new ongoing revenues.

One of the most significant unresolved areas involves implementation of Proposition 4 bond funds and Greenhouse Gas Reduction Fund (GGRF) expenditures. AB 109 provides funding for core CAL FIRE operations through the GGRF, but numerous climate, energy, wildfire resilience, water infrastructure, and natural resource funding decisions remain under discussion, including funding to address subsidence impacting the State Water Project. Legislative budget documents note that major GGRF and Proposition 4 appropriations will be addressed through ongoing negotiations with the Administration.

At the same time, the Legislature has passed the House of Origin deadline, and Sacramento has officially entered the second half of the legislative session. Hundreds of bills survived their first major test, but the path ahead remains challenging as measures now cross to the opposite house and must once again navigate policy committees, fiscal committees, and floor votes before reaching the Governor's desk. Historically, many bills that clear their house of origin still fail in the second house as concerns about policy impacts, costs, stakeholder opposition, or legislative priorities emerge.

Key Bills

AB 35 (Alvarez-D) Safe Drinking Water, Wildfire Prevention, Drought Preparedness, and Clean Air Bond Act of 2024: Administrative Procedure Act: exemption: program guidelines and selection criteria

This bill would exempt Proposition 4 funding from the regulatory requirements of the Administrative Procedures Act, which would allow state agencies to disperse funds more efficiently. While typically, the regulatory process is an important part of policy settings, Proposition 4 intentionally allocated funding to existing grant programs so that funding could be allocated. However, in the crafting of Proposition 4, an exemption from the APA was not included in the language. AB 35 would establish the exemption and contains an urgency clause so the bill would take effect immediately.

Position: Support (Coalition)

Status: In Senate Appropriations and will be heard on June 22.

AB 2180 (Ward-D) Local government: Proposition 218 Omnibus Implementation Act: proportional cost of service

This bill would clarify how water agencies comply with Proposition 218, particularly when setting tiered water rates. There have been several conflicting appellate court decisions in recent years that create confusion regarding Prop 218 compliance. AB 2180 would codify the more favorable framework established in Dreher v. LADWP and affirm that costs related to water supplies, infrastructure, and system-wide peak demand may be allocated using reasonable methodologies without tracing specific water sources to individual parcels. These methodologies could rely on existing or projected data to allocate service costs.

Position: Key Watch

Status: On the Senate floor.

AB 2215 (Calderon-D) Water rights: permits: State Water Project

AB 2215 is sponsored by the State Water Contractors. The bill would extend six key California Department of Water Resources water right permits tied to the State Water Project through December 31, 2046. The measure is intended to protect the State Water Project's long-term water supply reliability and avoid potential limits on water diversions if the permits are deemed expired. The bill also explicitly states that it does not approve new physical infrastructure projects, including the Delta Conveyance Project. This is another priority issue for the State Water Contractors.

Position: Support (Coalition)

Status: Will be heard in Senate Natural Resources on July 1.

SB 872 (McNerney-D) Climate change: funding priorities

This bill would create the Delta Levees and Canal Subsidence Fund to support repairs to subsidized State Water Project canals and Delta levees threatened by climate change, sea level rise, and groundwater-related land subsidence. It would authorize the state to accept funding from sources such as the General Fund, Greenhouse Gas Reduction Fund, bonds, federal funds, and private contributions to finance these projects. The bill would direct funding toward restoring water conveyance capacity in the State Water Project and improving levees in the Delta and Suisun Marsh, including projects that also enhance habitat, water quality, and flood protection. It would require the Department of Water Resources and the Delta Conservancy to develop public spending plans, hold workshops and community meetings, and regularly report to the Legislature on project priorities and expenditures. The bill would also specify that these funds could not be used for the construction or operation of any new Delta conveyance facilities, leaving those costs to the benefiting water agencies.

Position: Support (Coalition)

Status: This bill is currently in the Assembly Committee on Water, Parks, and Wildlife awaiting a hearing.

SB 1153 (Caballero-D) Disaster preparedness: urban retail water suppliers and public water systems: wildfire

SB 1153, sponsored by ACWA, seeks to provide liability protection for water agencies related to wildfires. The bill would establish that limitations in water supply or water pressure during a wildfire are not a substantial cause of wildfire damages. In addition, the bill would clarify that wildfire spread is not an inherent risk of the design, construction, or maintenance of a public water system. If passed, the bill would require urban retail water suppliers serving high or very high fire hazard severity zones to include wildfire-specific response procedures in their emergency response plans beginning Jan. 1, 2028.

Position: Support Coalition

Status: This bill made it out of the Assembly Emergency Management Committee on June 15 and will be heard next in the Assembly Committee on Environmental Safety and Toxic Materials.

Election Update

California's 2026 election cycle features one of the largest turnovers in statewide leadership in recent history, driven primarily by term limits and the departure of several long-serving constitutional officers. Most notably, Governor Gavin Newsom is termed out after two terms, creating an open race for the state's highest office and setting off a chain reaction across several statewide contests. Eleni Kounalakis is leaving the Lieutenant Governor's office to run for State Treasurer, while multiple other constitutional offices, including Treasurer and Insurance Commissioner, are also open due to term limits or retirements.

The resulting political reshuffling has created opportunities for current legislators, local elected officials, and statewide officeholders to seek higher office. In Orange County, the most significant vacancy is Senate District 34, where the departure of Senator Tom Umberg due to term limits created a highly competitive open-seat contest. Below is a brief summary of some of the district races.

Governor

The 2026 Governor's race is the highest-profile contest on the ballot and was created by Governor Gavin Newsom's departure due to term limits. After a crowded and expensive primary, former U.S. Health and Human Services Secretary Xavier Becerra and Republican Steve Hilton advanced to the November general election.

Primary Results

Xavier Becerra (D): 28%
Steve Hilton (R): 25%
Tom Steyer (D): 23%
Chad Bianco (R): 10%
Katie Porter (D): 4%
Matt Mahan (D): 4%
Antonio Villaraigosa (D): 1%

November Matchup

Xavier Becerra (D)
Steve Hilton (R)

Lieutenant Governor

The Lieutenant Governor's race became open as Lieutenant Governor Eleni Kounalakis chose not to seek reelection. The contest attracted several current and former statewide and local officials seeking to position themselves for future statewide opportunities.

Primary Results

Fiona Ma (D) – 19%
Gloria Romero (R) – 18%
Josh Fryday (D) – 15%
Michael Tubbs (D): 13%
David Collenberg (R): 7%
David Fennell (R): 6%

November Matchup

Fiona Ma (D)
Gloria Romero (R)

Insurance Commissioner

The Insurance Commissioner race is one of the most consequential contests on the statewide ballot due to California's ongoing homeowners insurance crisis and increasing wildfire-related risks. The seat became open as Insurance Commissioner Ricardo Lara reached his term limit.

Primary Results

Jane Kim (D): 27%
Ben Allen (D): 19%
Stacy Korsgaden (R): 16%
Robert Howell (R): 8%
Patrick Wolff (D): 7%

November Matchup

Jane Kim (D)
Ben Allen (D)

Senate District 34 (Open Seat)

Senate District 34 remains the most closely watched legislative race in Orange County. The district will feature a November matchup between Assemblymember Avelino Valencia (D-Anaheim) and former Placentia Mayor Rhonda Shader (R), with both candidates advancing through California's top-two primary.

Primary Results:

Avelino Valencia (D): approximately 65%
Rhonda Shader (R): approximately 35%

November Matchup:

Avelino Valencia (D)
Rhonda Shader (R)

Assembly District 67 (Open Seat)

With Assemblymember Sharon Quirk-Silva termed out, AD 67 produced one of Orange County's most competitive primaries. Republican Paulo Morales finished first, while Democrat Mark Pulido secured the second position and advanced to the general election.

Primary Results:

Paulo Morales (R): 32%
Mark Pulido (D): 26%
Ada Briceño (D): 24%
Ali Taj (D): 8%
Adrian Ayub (R): 6%

Paul Gonzales (D): 5%

November Matchup:

Paulo Morales (R)
Mark Pulido (D)

Assembly District 59

Assemblymember Phillip Chen easily advanced through the primary and remains one of the strongest Republican incumbents in Orange County. The district continues to be a GOP stronghold spanning portions of Orange, Riverside, and San Bernardino Counties.

Primary Results:

Phillip Chen (R): 66%

Victor Hernandez (Green): 34%

November Matchup:

Phillip Chen (R)

Victor Hernandez (Green)

Assembly District 68 (Open Seat)

Assemblymember Avelino Valencia's decision to run for Senate created an open-seat in AD 68, making this district one of the key succession opportunities in Orange County politics.

Primary Results:

David Penaloza (D): 33%

Jessie Lopez (D): 31%

Mayra Ruiz (R): 29%

Shannon Wingfield (D): 7%

November Matchup:

David Penaloza (D)

Jessie Lopez (D)

Assembly District 70

Assemblymember Tri Ta remains positioned for reelection in this Republican-leaning district, though democratic challenger, Paula Swift did receive just over 46%.

Primary Result:

Tri Ta (R): 54%

Paula Swift (D): 46%

November Matchup:

Tri Ta (R)

Paula Swift (D)

Assembly District 71

Assemblymember Kate Sanchez advanced without significant difficulty and enters the general election as the favorite. The district continues to be one of the stronger Republican-held seats in Orange County.

Primary Result:

Kate Sanchez (R): 58%

JJ Galves (D): 42%

November Matchup:

Kate Sanchez (R)

JJ Galves (D)

Assembly District 72 (Open Seat)

Assembly District 72 is shaping up to be one of the more competitive legislative contests in Orange County. The race became open after Assemblymember Diane Dixon chose to run for the Orange County Board of Supervisors rather than seek reelection, creating an opportunity for both parties to compete for the seat.

Primary Results:

Chris Kluwe (D): 44%
Gracey Van Der Mark (R): 38%
Matthew Harper (R): 16%
Frank Wagoner (NPP): 2.2%

November Matchup:

Chris Kluwe (D)
Gracey Van Der Mark (R)

Assembly District 73

Assemblymember Cottie Petrie-Norris advanced to the general election and remains favored in this coastal Orange County district. Democrats continue to perform well in the Newport Beach-Irvine-Laguna Woods corridor despite competitive Republican challenges.

Primary Result:

Cottie Petrie-Norris (D): 61%
Urson Russell (R): 39%

November Matchup:

Cottie Petrie-Norris (D): 61%
Urson Russell (R): 39%

Regulatory and Administrative Actions

Delta Conveyance Project

On February 9, the State Water Resources Control Board (State Water Board) announced a Notice of Public Hearing and Procedural Ruling. The hearing will gather evidence that the State Water Board will consider whether to approve change petitions filed by the Department of Water Resources to add two new points of diversion and redirection for the State Water Project.

- Public hearings: June 1, 4, 5, 8, 9, 10, 15, 18, 23, 24, and 26 at 9:00 am

Urban Water Management Plans

Urban Water Management Plans for the 2025 cycle must be adopted and submitted by July 1, 2026. UWMPs must be submitted into DWR within 30 days of adoption.

- Guidance documents: [2025 UWMP Guidebook](#)

Emergency Vehicle Emissions Regulations

Zero Emission Vehicle and Infrastructure Report

The California Department of Transportation (CalTrans) released the annual Zero Emission Vehicle and Infrastructure Report (report). This report outlines Caltrans' progress in transitioning the Caltrans fleet to ZEVs, as the State's largest government fleet. The report includes comparisons between ZEVs and internal combustion vehicle options for purchase costs and duty cycles and charging infrastructure costs.

The full report can be found [here](#).

California Advocates, Inc. Activity Report

- Attended weekly water lobbyists meetings.

- Attended ACWA State Legislative Committee on May 22 and June 12
- Coordinated and attended lobbying meetings on SB 872 and AB 2215.
- Floor lobbying on AB 2215, SB 872, and SB 1153.
- Coordinated lobbying meetings in support of SB 1153.
- Testified in Support of SB 1153 in Assembly Emergency Management Committee.
- Testified in support of the \$25 million for the Healthy Rivers and Landscape program in the Governor's May Revise in Budget Committees.

July

July 2 – Summer Recess Begins

[AB 105](#) **(Gabriel, D) Budget Acts of 2021, 2023, 2024, and 2025.**

Introduced: 01/08/2025 (Spot bill)

Last Amended: 09/08/2025

Status: 09/13/2025 - Ordered to inactive file at the request of Senator Grayson.

Location: 09/13/2025 - Senate INACTIVE FILE

Summary: The Budget Acts of 2021, 2023, 2024, and 2025 made appropriations for the support of state government for the 2021–22, 2023–24, 2024–25, and 2025–26 fiscal years, respectively. This bill would amend those budget acts by amending, adding, and repealing items of appropriation and making other changes. This bill would declare that it is to take effect immediately as a Budget Bill. (Based on 09/08/2025 text)

[AB 2260](#) **(Connolly, D) Water: restoration management: small restoration use.**

Introduced: 02/19/2026

Last Amended: 05/18/2026

Status: 06/10/2026 - Referred to Com. on N.R. & W.

Location: 06/10/2026 - Senate Natural Resources and Water

Summary: The Water Rights Permitting Reform Act of 1988 authorizes any person to obtain a right to appropriate water for a small domestic, small irrigation, or livestock stockpond use, as defined, upon registering the use with the State Water Resources Control Board, as prescribed, payment of a registration fee, and application of the water to reasonable and beneficial use with due diligence. This bill would extend the above-described ability to obtain a right to appropriate water to a small restoration use, as provided. The bill would define several terms for these purposes, including defining a small restoration use as a specified use of water for native fish and wildlife preservation and enhancement in connection with a project to restore, enhance, or provide habitat for native fish and wildlife, as provided. The bill would require the board to give priority to processing small restoration use registrations that are coupled with a petition for mandatory dedication to instream beneficial uses or wetlands habitat, as specified (Based on 05/18/2026 text)

[SB 601](#) **(Allen, D) Water: waste discharge.**

Introduced: 02/20/2025

Last Amended: 07/10/2025

Status: 08/28/2025 - Failed Deadline pursuant to Rule 61(a)(11). (Last location was APPR. SUSPENSE FILE on 8/20/2025)(May be acted upon Jan 2026)

Location: 08/28/2025 - Assembly 2 YEAR

Summary: The State Water Resources Control Board and the 9 California regional water quality control boards regulate water quality and prescribe waste discharge requirements in accordance with the Porter-Cologne Water Quality Control Act (act) and the National Pollutant Discharge Elimination System (NPDES) permit program. Under the act, the State Water Resources Control Board is authorized to adopt water quality control plans for waters for which quality standards are required by the federal Clean Water Act, as specified, and that in the event of a conflict, those plans supersede regional water quality control plans for the same waters. This bill would

authorize the state board to adopt water quality control plans for nexus waters, which the bill would define as all waters of the state that are not also navigable, except as specified. The bill would require any water quality standard that was submitted to, and approved by, or is awaiting approval by, the United States Environmental Protection Agency or the state board that applied to nexus waters as of May 24, 2023, to remain in effect, as provided. (Based on 07/10/2025 text)

[AB 1413](#) ([Papan, D](#)) Sustainable Groundwater Management Act: groundwater adjudication.

Introduced: 02/21/2025 (Spot bill)

Last Amended: 09/02/2025

Status: 09/11/2025 - Failed Deadline pursuant to Rule 61(a)(14). (Last location was INACTIVE FILE on 9/9/2025) (May be acted upon Jan 2026)

Location: 09/11/2025 - Senate 2 YEAR

Summary: Current law requires the Department of Water Resources to periodically review the groundwater sustainability plans developed by groundwater sustainability agencies pursuant to the act to evaluate whether a plan conforms with specified laws and is likely to achieve the sustainability goal for the basin covered by the plan. Current law requires a groundwater sustainability agency to evaluate its groundwater sustainability plan periodically. This bill would require a groundwater sustainability agency to, at least once every 7 years, review, and update if appropriate, its sustainable yield to ensure that the sustainable yield is based on the best available information and best available science, as defined, and will achieve sustainable groundwater management. The bill would also require a groundwater sustainability agency to provide an opportunity for public review and comment before making a determination whether to update its sustainable yield. To the extent that these requirements impose additional duties on groundwater sustainability agencies that are local agencies, the bill would impose a state-mandated local program. (Based on 09/02/2025 text)

[AB 2013](#) ([Bennett, D](#)) High and very high fire risk areas: community water systems: preparedness and resiliency.

Introduced: 02/17/2026

Last Amended: 04/06/2026

Status: 04/23/2026 - Failed Deadline pursuant to Rule 61(b)(5). (Last location was EMERGENCY MANAGEMENT on 4/7/2026)

Location: 04/23/2026 - Assembly DEAD

Summary: Existing law requires the State Fire Marshal to identify areas in the state as moderate, high, and very high fire hazard severity zones based on consistent statewide criteria and based on the severity of fire hazard that is expected to prevail in those areas. This bill would require a community water system that services more than 100 customers that are located in a high or very high fire risk area, as defined, to include an annex to its disaster preparedness plans, as provided, that includes information regarding system preparedness and resiliency during a wildfire. The bill would require the annex to contain several things, including, among others, an assessment that identifies the minimum number of and type of water pumps that are necessary to maintain average daily capacity, including, but not limited to, the operation of fire hydrant systems at the rated capacity. [SB 885](#) ([Strickland, R](#)) Restoring Accountability Act: major regulations.

Introduced: 01/13/2026

Last Amended: 04/07/2026

Status: 04/23/2026 - Failed Deadline pursuant to Rule 61(b)(5). (Last location was G.O. on 2/11/2026)

Location: 04/23/2026 - Senate DEAD

Summary: The Administrative Procedure Act governs the procedures for the adoption, amendment, or repeal of regulations by state agencies and for the review of those regulatory actions by the Office of Administrative Law. Existing law requires a state agency proposing to adopt, amend, or repeal an administrative regulation to, among other things, assess the potential for adverse economic impact on California business enterprises and individuals, and requires a state agency proposing to adopt, amend, or repeal a major regulation on or after November 1, 2013, to prepare and submit to the Department of Finance for comment, a standardized regulatory impact analysis, as provided. Existing law defines "major regulation" for purposes of the act to mean any proposed adoption, amendment, or repeal of a regulation subject to review by the office that will have an economic impact on California business enterprises and individuals in an amount exceeding \$50,000,000, as provided. Existing law establishes procedures for the adoption of emergency regulations, including requiring that the state agency make a finding that the adoption of a regulation or order of repeal is necessary to address an emergency, as defined. Under existing law, a regulation, amendment, or order of repeal adopted as an emergency regulatory action may only remain in effect for up to 180 days, unless the adopting agency complies with specified requirements. This bill, the Restoring Accountability Act, would prohibit a state agency from taking final action to adopt a major regulation until certain requirements are met, including that after the state agency prepares a standardized regulatory impact analysis and submits the analysis to the Department of Finance, as described above, the state agency submits a proposal to the Legislature recommending legislation to authorize the adoption of the major regulation and the Legislature enacts a law expressly authorizing the state agency to adopt that major regulation. The bill, notwithstanding that prohibition, would authorize a state agency to adopt an emergency regulation that is a major regulation if the state agency complies with specified requirements governing the adoption of emergency regulations. [AB 35](#) ([Alvarez, D](#)) Safe Drinking Water, Wildfire Prevention, Drought Preparedness, and Clean Air Bond Act of 2024: Administrative Procedure Act: exemption: program guidelines and selection criteria.

Introduced: 12/02/2024

Last Amended: 06/11/2026

Status: 06/11/2026 - Read second time and amended. Re-referred to Com. on APPR.

Location: 06/09/2026 - Senate Appropriations

Summary: The Administrative Procedure Act sets forth the requirements for the adoption, publication, review, and implementation of regulations by state agencies. The Safe Drinking Water, Wildfire Prevention, Drought Preparedness, and Clean Air Bond Act of 2024 (act), approved by the voters as Proposition 4 at the November 5, 2024, statewide general election, authorized the issuance of bonds in the amount of \$10,000,000,000 pursuant to the State General Obligation Bond Law to finance projects for safe drinking water, drought, flood, and water resilience, wildfire and forest resilience, coastal resilience, extreme heat mitigation, biodiversity and nature-based climate solutions, climate-smart, sustainable, and resilient farms, ranches, and working lands, park creation and outdoor access, and clean air programs. Existing law authorizes certain regulations needed to effectuate or implement programs of the act to be adopted as emergency regulations in accordance with the Administrative Procedure Act, as provided. Existing law requires the emergency regulations to be filed with the Office of Administrative Law and requires the emergency regulations to remain in effect until repealed or amended by the adopting state agency. This bill, notwithstanding the above, would exempt the adoption of regulations needed to effectuate or implement programs of the act from the requirements of the Administrative Procedure Act, as provided. The bill would require a state entity that receives funding to administer a competitive grant program established using the Administrative Procedure Act exemption to do certain things, including, among other things, to develop draft project solicitation and evaluation guidelines, to transmit copies of those guidelines to the fiscal committees and to the appropriate policy committees of the Legislature, to hold a noticed public meeting on those

guidelines, and to submit those guidelines to the Secretary of the Natural Resources Agency, except as provided. (Based on 06/11/2026 text)

Location: 05/26/2026 - Assembly Water, Parks and Wildlife

Summary: the Sacramento-San Joaquin Delta Reform Act of 2009, declares that the Sacramento-San Joaquin Delta (Delta) is a critically important natural resource for California and the nation and it serves as both the hub of the California water system and the most valuable estuary and wetland ecosystem on the west coast of North and South America. Existing law establishes in the Natural Resources Agency the Department of Water Resources. Existing law requires the department and the Department of Fish and Wildlife to determine the principal options for the Delta and requires the department to evaluate and comparatively rate each option for its ability to do specified things, including, among others, to maintain Delta water quality for Delta users, and to preserve, protect, and improve Delta levees. Existing law establishes in the agency the Sacramento-San Joaquin Delta Conservancy. Existing law requires the conservancy to act as a primary state agency to implement ecosystem restoration in the Delta and to support efforts that advance environmental protection and the economic well-being of Delta residents. Existing law provides for the preservation of specified management areas of the Suisun Marsh, pursuant to a protection plan prepared and adopted by the San Francisco Bay Conservation and Development Commission, as provided. Existing law establishes the Delta Stewardship Council, and requires the council to develop, adopt, and implement a comprehensive long-term management plan for the Delta, known as the Delta

Plan, as provided. This bill would establish the Delta Levees and Canal Subsidence Fund in the State Treasury and, upon appropriation, would make the moneys in the fund available to the Secretary of the Natural Resources Agency for expenditure consistent with the allocations described below. The bill would authorize the secretary to seek out, and the fund to accept, state moneys from, among other sources, any bond funds, the General Fund, or the Greenhouse Gas Reduction Fund. The bill would authorize the fund to accept moneys from nonstate sources, including federal and private moneys, and would continuously appropriate those moneys without regard to fiscal year, for allocation as described, thereby making an appropriation. [SB 899](#) ([Grove, R](#)) Fire prevention: Wildfire and Forest Resilience Task Force: wildfire smoke.

Introduced: 01/20/2026

Last Amended: 05/14/2026

Status: 06/09/2026 - From committee: Do pass and re-refer to Com. on APPR. with recommendation: To consent calendar. (Ayes 13. Noes 0.) (June 8). Re-referred to Com. on APPR.

Location: 06/08/2026 - Assembly Appropriations

Summary: Existing law requires the Wildfire and Forest Resilience Task Force to develop a comprehensive implementation strategy to track and ensure the achievement of the goals and key actions identified in the state's "Wildfire and Forest Resilience Action Plan," as provided. Existing law requires, on or before March 1, 2026, and every 5 years thereafter, the task force to update the action plan. This bill would require the task force, on or before July 1, 2028, and in cooperation with the Office of Environmental Health Hazard Assessment, the State Air Resources Board, and the State Department of Public Health, to assess the health costs and impacts of wildfire smoke using existing wildfire smoke and health data, as provided. The bill would require the task force, in developing this assessment, to, among other things, develop a model to determine the approximate health benefits of achieving the goals identified in the action plan and make recommendations on how the action plan can increase its health benefits. [SB 1153](#) ([Caballero, D](#)) Disaster preparedness: urban retail water suppliers and public water systems: wildfire.

Introduced: 02/18/2026

Last Amended: 04/28/2026

Status: 06/08/2026 - Referred to Coms. on E.M, E.S & T.M., and JUD.

Location: 06/08/2026 - Assembly Emergency Management

Summary: The California Emergency Services Act requires all public water systems, as defined, with 10,000 or more service connections to review and revise their disaster preparedness plans in conjunction with related agencies, including, but not limited to, local fire departments and the Office of Emergency Services, to ensure that the plans are sufficient to address possible disaster scenarios. A person, as defined, who violates the provisions of this act is guilty of a misdemeanor. This bill, beginning January 1, 2028, would require all urban retail water suppliers, as defined, serving a high or very high fire hazard severity zone to include incident-specific response procedures for wildfires as part of their disaster preparedness plans, including any applicable emergency response plan as required by federal law. The bill would require these plans to include, among other things, mitigation actions, including actions, procedures, and equipment, that can obviate or significantly lessen the impact of a wildfire on the water system and the supply of drinking water provided by the water supplier. Because violation of these requirements by certain urban retail water suppliers would constitute a misdemeanor, the bill would expand the scope of a crime, thereby imposing a state-mandated local program. [AB 532](#) ([Ransom, D](#)) Water rate assistance program.

Introduced: 02/11/2025

Last Amended: 07/17/2025

Status: 08/29/2025 - Failed Deadline pursuant to Rule 61(a)(11). (Last location was APPR. SUSPENSE FILE on 8/18/2025)(May be acted upon Jan 2026)

Location: 08/29/2025 - Senate 2 YEAR

Summary: Current federal law, the Consolidated Appropriations Act, 2021 requires the federal Department of Health and Human Services to carry out a Low-Income Household Drinking Water and Wastewater Emergency Assistance Program, which is also known as the Low Income Household Water Assistance Program, for making grants to states and Indian tribes to assist low-income households that pay a high proportion of household income for drinking water and wastewater services, as provided. Current law requires the Department of Community Services and Development to administer the Low Income Household Water Assistance Program in this state, and to receive and expend moneys appropriated and allocated to the state for purposes of that program, pursuant to the above-described federal law. The Low Income Household Water Assistance Program was only operative until March 31, 2024. This bill would repeal the above-described requirements related to the Low Income Household Water Assistance Program. (Based on 07/17/2025 text)

Status: 06/03/2026 - From committee chair, with author's amendments: Amend, and re-refer to committee. Read second time, amended, and re-referred to Com. on E.Q.

Location: 05/06/2026 - Senate Environmental Quality

Summary: Existing law establishes methane emissions reduction goals that include a target to reduce landfill disposal of organics by 75% of the 2014 level of the statewide disposal of organic waste by 2025. Existing law requires the Department of Resources Recycling and Recovery, in consultation with the State Air Resources Board, to adopt regulations to achieve the organic waste reduction goals. Existing law authorizes a local jurisdiction to count specified recovered organic waste products towards up to 10% of its recovered organic waste procurement target. This bill would additionally authorize a local jurisdiction to count a beneficial agricultural amendment derived from organic waste processed with biosolids towards up to that 10% of its recovered organic waste procurement target if the material is processed at a facility authorized by the department using specified approved technologies, the material is registered or approved for end use as a fertilizing material by the Department of Food and Agriculture, as provided, and the material is not derived from, or processed using, specified activities relating to the final deposition or management of solid waste, as provided. Status: 05/06/2026 - Referred to Com. on L., P.E. & R.

Location: 05/06/2026 - Senate Labor, Public Employment and Retirement

Summary: Would establish the Deferred Retirement Option Program as a voluntary program within the Public Employees' Retirement System (PERS) for employees of State Bargaining Units 5 (Highway Patrol) and 8 (Firefighters). The bill would require certain actions to occur, including completion of an actuarial analysis to determine the proposed program will be cost neutral, before the program becomes effective and applicable. The bill would require members who elect to participate in the program to meet certain requirements, including waiving any claims with respect to age and other discrimination in employment laws relative to the program. The bill would establish a program account for each participant and would require the Board of Administration of the Public Employees' Retirement System to, among other things and at least once annually, provide a statement to the participant that displays the value or balance of the participant's program account. The bill would authorize the participant to designate a person or persons as beneficiaries of the participant's program account at any time during the program period from their election date to the deferred retirement calculation date. Beginning on July 1, 2027, and on that date every 5 consecutive fiscal years thereafter, the bill would require the Board of Administration of the Public Employees' Retirement System to submit a report of an actuarial analysis to specified entities. The bill would entitle participants who entered the program prior to the effective date of any modifications by the Legislature to elect whether to become subject to those modified provisions or to remain subject to the program as it existed on the participant's election date. The bill would require the member's spouse, as applicable, to execute a signed statement acknowledging the spouse's understanding of, and agreement with, the member's election to participate in the program together with an express statement of the spouse's understanding and agreement that benefits payable to the spouse may be reduced as a result of participation in the program. [AB 1227](#) ([Ellis, R](#)) Wildfire safety: fuels reduction projects.

Introduced: 02/21/2025

Last Amended: 07/17/2025

Status: 08/29/2025 - Failed Deadline pursuant to Rule 61(a)(11). (Last location was APPR. SUSPENSE FILE on 8/25/2025)(May be acted upon Jan 2026)

Location: 08/25/2025 - Senate 2 YEAR

Summary: Current law authorizes the Governor, during a state of emergency, to suspend any regulatory statute, or statute prescribing the procedure for conduct of state business, or the orders, rules, or regulations of any state agency, if the Governor determines and declares that strict compliance with any statute, order, rule, or regulation would in any way prevent, hinder, or delay the mitigation of the effects of the emergency. Under the authority of the California Emergency Services Act, on March 1, 2025, Governor Gavin Newsom issued a proclamation of a state of emergency that suspends applicable state statutes, rules, regulations, and requirements that fall within the jurisdiction of boards, departments, and offices within the California Environmental Protection Agency or the Natural Resources Agency to the extent necessary for expediting critical fuels reduction projects, as provided. The proclamation requires an individual or entity desiring to conduct a critical fuels reduction project to request the secretary of the appropriate agency to make a determination that the proposed project is eligible for the suspension and requires the California Environmental Protection Agency and the Natural Resources Agency to maintain on their respective internet website a list of all suspensions approved. This bill would, on or before January 31, 2026, require the California Environmental Protection Agency and the Natural Resources Agency to

each report to the Legislature information on the implementation of the above-described proclamation of emergency, as provided. (Based on 07/17/2025 text)

Introduced: 02/21/2025

Last Amended: 06/11/2026

Status: 06/11/2026 - Read second time and amended. Re-referred to Com. on APPR.

Location: 06/10/2026 - Senate Appropriations

Summary: The California Constitution grants the retirement board of a public employee retirement system plenary authority and fiduciary responsibility for investment of moneys and administration of the retirement fund and system. These provisions qualify this grant of powers by reserving to the Legislature the authority to prohibit investments if it is in the public interest and the prohibition satisfies standards of fiduciary care and loyalty required of a retirement board. Existing law prohibits the boards of the Public Employees' Retirement System (PERS) and the State Teachers' Retirement System (STRS) from making certain new investments or renewing existing investments of public employee retirement funds, including in a thermal coal company, as defined. Existing law provides that a board is not required to take any action regarding those investments unless the board determines in good faith that the action is consistent with the board's fiduciary responsibilities established in the California Constitution. This bill would request the University of California, Berkeley, Labor Center to conduct an independent study to analyze the extent of labor standards protections in California real estate and infrastructure development projects funded through the real asset portfolios of PERS and STRS. Location: 06/10/2026 - Senate Labor, Public Employment and Retirement

Summary: Existing law requires every state agency to develop and implement a telecommuting plan as part of its telecommuting program in work areas where telecommuting is identified as being both practical and beneficial to the organization. Existing law requires the Department of General Services to establish a unit for purposes of overseeing telecommuting programs that is required to, among other things, develop and update policy, procedures, and guidelines to assist agencies in the planning and implementation of telecommuting programs. Existing law requires the department to establish criteria for evaluating the state's telecommuting program. Existing law defines "telecommuting" for purposes of those provisions. This bill would revise and recast those provisions. The bill would replace the term "telecommuting" with "telework," as defined. The bill would also require the Department of General Services to establish a telework dashboard that displays the cost-effectiveness and efficiency benefits of state telework programs. Location: 06/10/2026 - Senate Natural Resources and Water

Summary: Existing law, until January 1, 2030, generally prohibits a person from possessing, importing, shipping, or transporting in the state, or from placing, planting, or causing to be placed or planted in any water in the state, invasive mussels, and authorizes the Director of Fish and Wildlife or the director's designee to engage in various enforcement activities, including ordering the areas in conveyance that contain water be drained, dried, or decontaminated, as provided. Existing law requires a public or private agency that operates a water supply system to cooperate with the Department of Fish and Wildlife to implement measures to avoid infestation by invasive mussels and to control or eradicate any infestation that may occur in a water supply system. Existing law requires, if invasive mussels are detected, the operator of a water supply system to, in cooperation with the department, prepare and implement a plan to control or eradicate invasive mussels within the system, and eliminate or minimize any potential downstream transport of an invasive mussel. Existing law requires, on or before December 31, 2026, the department to review all approved plans and require all plans that do not specifically address all invasive mussel species known to be present in bodies of water in the state as of January 1, 2026, to be updated or revised appropriately to include all invasive mussel species, on or before September 30, 2027. Existing law requires every invasive mussel species to be addressed in a plan no later than 180 days from the date that the species is listed in a certain regulation. Existing law defines "invasive mussel" for these purposes as any nonnative detrimental mussel, as provided. This bill would prohibit a conveyance from being launched until a specified drying period has completed, as provided. By expanding the scope of a crime, this bill would impose a state-mandated local program. The bill would require the department to require water supply system operators to update their plans to address all invasive mussel species present in the operator's water system as of January 1, 2026, as provided. Last Amended: 03/12/2026

Status: 05/20/2026 - Referred to Com. on L. GOV.

Location: 05/20/2026 - Senate Local Government

Summary: Existing law establishes a program to allow counties to select a bidder on the basis of best value, as defined, for construction projects in excess of \$1,000,000. Existing law also authorizes counties to use a best value construction contracting method to award individual annual contracts, not to exceed \$3,000,000, for repair, remodeling, or other repetitive work to be done according to unit prices, as specified. Existing law establishes procedures and criteria for the selection of a best value contractor and requires that bidders verify specified information under oath. Existing law requires the board of supervisors of a participating county to submit a report that contains specified information about the projects awarded using the best value procedures described above to the appropriate policy committees of the Legislature and the Joint Legislative Budget Committee before March 1, 2029. Existing law repeals the program provisions on January 1, 2030. This bill would, instead, authorize a county, city, or the San Gabriel Valley Council of Governments to select a bidder on the basis of best value, as described above, for construction projects in excess of \$500,000, would make various conforming changes to the above-described provisions, and would extend the operation of those provisions until January 1, 2040. Status: 06/10/2026 - Referred to Coms. on L., P.E. & R. and JUD.

Location: 06/10/2026 - Senate Labor, Public Employment and Retirement

Summary: Existing law requires that, except as specified, not less than the general prevailing rate of per diem wages be paid to workers employed on public works. Existing law defines "public works," for the purposes of regulating public works contracts as, among other things, construction, alteration, demolition, installation, or repair work done under contract and paid for, in whole or in part, out of public funds. Existing law makes any officer, agent, or representative of the state or of any political subdivision who willfully violates specified provisions, including providing notice of certain public works projects, as specified, to the Department of Industrial Relations, guilty of a misdemeanor. Existing law requires the Labor Commissioner to investigate allegations that a contractor or subcontractor violated the law regulating public works projects, including the payment of prevailing wages. Existing law requires each contractor and subcontractor on a public works project to keep accurate payroll records, showing the name, address, social security number, work classification, straight time and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker, or other employee employed by the contractor or subcontractor in connection with the public work. This bill would require an awarding body or owner to give reasonable access, as defined, to representatives of a joint-labor management committee in order to monitor compliance with the prevailing wage and apprenticeship requirements. The bill would authorize an awarding body, owner, contractor, or subcontractor to deny or revoke access to the committee's representative if the representative fails or refuses to comply with job site safety requirements, as specified. The bill would authorize the committee to bring an action against an awarding body, contractor, or subcontractor that willfully denies the committee's representative reasonable access. Status: 05/28/2026 - In Senate. Read first time. To Com. on RLS. for assignment.

Location: 05/28/2026 - Senate Rules

Summary: Existing law establishes various protections for California Native American tribes, including prohibiting a public agency or private party using or occupying public property or operating on public property from interfering with the free expression or exercise of Native American religion as provided in the United States Constitution and the California Constitution. Existing law also requires a local government to provide formal notification to each California Native American tribe that is traditionally and culturally affiliated with the project site as an invitation to consult on the proposed project, as provided. Existing law requires the local government, during the consultation, to give deference to the tribal information, tribal knowledge and customs, and the significance of the resource to the California Native American tribe. Existing law prohibits any information, as described, that is submitted by a California Native American tribe during the environmental review process from being included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, as specified, without the prior consent of the tribe that provided the information. This bill, the California Indian Freedom Act of 2026, would prohibit a governmental agency from substantially burdening a California Indian or California Native American tribe's exercise of religious beliefs or spiritual practices on state lands, including their access to and use of sacred sites and objects, and their ability to perform religious ceremonies and rites, even if the burden results from a rule of general applicability, unless the governmental agency demonstrates that application of the burden is in furtherance of a compelling governmental interest and is in the least restrictive means of furthering that interest. [AB 1895](#) (Hadwick, R) Surplus Land Act: exemptions: land unsuitable for housing.

Introduced: 02/12/2026

Status: 04/23/2026 - Failed Deadline pursuant to Rule 61(b)(5). (Last location was L. GOV. on 3/2/2026)

Location: 04/23/2026 - Assembly DEAD

Summary: Current law requires land to be declared either surplus land or exempt surplus land, as supported by written findings, before a local agency may take any action to dispose of it consistent with an agency's policies or procedures. Current law establishes procedures for the disposal of surplus land. These procedures do not apply to the disposal of exempt surplus land. Current law establishes various categories of exempt surplus land, including surplus land that is a former street, right-of-way, or easement, and is conveyed to an owner of an adjacent property. This bill would broaden the definition of exempt surplus land to include land that is unsuitable for housing development due to the presence of one or more specified characteristics, including land with slope instability that increases risk of mudslides, landslides, subsidence, liquefaction, and other seismic hazards. Location: 06/03/2026 - Senate Natural Resources and Water

Summary: Existing law, until January 1, 2030, generally prohibits a person from possessing, importing, shipping, or transporting in the state, or from placing, planting, or causing to be placed or planted in any water within the state, invasive mussels, as defined. Existing law requires a public or private agency that operates a water supply system to cooperate with the Department of Fish and Wildlife to implement measures to avoid infestation by invasive mussels and to control or eradicate any infestation that may occur in a water supply system, and, if invasive mussels are detected, to prepare and implement a plan, as specified, to control or eradicate invasive mussels within the system (control plan). Existing law prohibits the importation, transportation, possession, or live release of specified wild animals, except under a revocable, nontransferable permit, known as a restricted species permit, issued by the department, in cooperation with the Department of Food and Agriculture, and only if certain requirements are met. Existing law authorizes the department to issue permits, commonly known as scientific collecting permits, to take or possess any form of plant or animal life for scientific, educational, or propagation purposes. This bill would exempt from the requirement to obtain a restricted species permit for golden mussels a

public or private agency that operates a water supply system and has submitted a control plan to the department for maintenance and operational activities in the water supply system, as specified. (Based on 06/11/2026 text)

Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 5/6/2026)

Location: 05/14/2026 - Assembly DEAD

Summary: Existing law establishes a workers' compensation system, administered by the Administrative Director of the Division of Workers' Compensation, to compensate an employee, as defined, for injuries that arise out of, and in the course of, employment. Existing law requires employers to provide medical, surgical, chiropractic, acupuncture, licensed clinical social worker, and hospital treatment reasonably required to cure or relieve the injured worker from the effects of the injury. Existing law makes it a misdemeanor for an employer to discharge, threaten to discharge, or discriminate against, or for an insurer to advise, direct, or threaten an insured to discharge, an employee because they have filed or made known their intention to file a claim for compensation, or an application for adjudication, or because the employee has received a rating, award, or settlement, as specified. This bill would require an employee, when possible, to make a reasonable effort to schedule treatment outside of work hours. The bill would require the employee, if the timing of the treatment is foreseeable, to provide notice if treatment occurs during work hours, as specified, and require the employer to provide this leave during work hours unless business necessity requires the treatment to occur at a different time or on a different day. The bill would require that the leave taken by an employee pursuant to these provisions run concurrently with leave taken pursuant to the federal Family and Medical Leave Act of 1993 and the California Family Rights Act if the employee would have been eligible for that leave. [AB 2132](#) ([Macedo, R](#)) California Environmental Quality Act: exemption: groundwater recharge project.

Introduced: 02/18/2026

Status: 04/23/2026 - Failed Deadline pursuant to Rule 61(b)(5). (Last location was W.,P. & W. on 4/6/2026)

Location: 04/23/2026 - Assembly DEAD

Summary: The California Environmental Quality Act (CEQA) requires a lead agency to prepare a mitigated negative declaration for a project that may have a significant effect on the environment if revisions in the project would avoid or mitigate that effect and there is no substantial evidence that the project, as revised, would have a significant effect on the environment. The Sustainable Groundwater Management Act requires all groundwater basins designated as high- or medium-priority basins by the Department of Water Resources to be managed under a groundwater sustainability plan or coordinated groundwater plans, except as specified. Current law requires a groundwater sustainability plan to include various information relating to subsidence, as applicable. This bill would exempt from the requirements of CEQA a groundwater recharge project if the Secretary of the Natural Resources Agency determines the project would address subsidence. Because a lead agency would be required to determine whether a project qualifies for this exemption, the bill would impose a state-mandated local program. (Based on 02/18/2026 text)

[AB 2184](#) ([Wilson, D](#)) Cap-and-Invest Program: nature-based climate solutions: funding.

Introduced: 02/19/2026

Last Amended: 03/26/2026

Status: 05/14/2026 - In committee: Held under submission.

Location: 04/22/2026 - Assembly APPR. SUSPENSE FILE

Summary: Existing law requires the Natural Resources Agency, in collaboration with the State Air Resources Board, the California Environmental Protection Agency, the Department of Food and Agriculture, an expert advisory committee established, as provided, and other relevant state agencies, to determine an ambitious range of targets for natural carbon sequestration, and for nature-based climate solutions that reduce greenhouse gas emissions for 2030, 2038, and 2045 to support state goals to achieve carbon neutrality and foster climate adaptation and resilience. Existing law defines “nature-based climate solutions” for these purposes to mean activities, such as restoration, conservation, and land management actions, that increase net carbon sequestration or reduce greenhouse gas emissions in natural and working lands. This bill would annually appropriate the sum of \$250,000,000 from the Greenhouse Gas Reduction Fund in the annual Budget Act each fiscal year from the 2027–2028 to the 2045–46 fiscal year, inclusive, to achieve nature-based climate solutions on natural, working, and urban lands, including \$150,000,000 to be allocated to the Natural Resources Agency to fund nature-based climate solutions, as provided, and \$100,000,000 to be allocated for nature-based climate solutions at the discretion of the Legislature, as provided. The bill would additionally appropriate, after those amounts are allocated, the sum of \$150,000,000 from the Greenhouse Gas Reduction Fund in the annual Budget Act each fiscal year from the 2027–2028 to the 2045–46 fiscal year, inclusive, to the Department of Food and Agriculture to fund sustainable agricultural practices and nature-based climate solutions, as provided. Location: 05/28/2026 - Assembly DEAD

Summary: The Unruh Civil Rights Act requires persons within the jurisdiction of the state to be free and equal and, regardless of the person's sex, race, color, religion, ancestry, national origin, disability, medical condition, genetic information, marital status, sexual orientation, citizenship, primary language, or immigration status, to be entitled to the full and equal accommodations, advantages, facilities, privileges, or services in all business establishments, as prescribed, and makes a violation of the federal Americans with Disabilities Act of 1990 (ADA) a violation of the act. Existing law imposes liability upon a person who denies, aids, or incites a denial of, or makes any discrimination or distinction contrary to, rights afforded by law for actual damages suffered, exemplary damages, a civil penalty, and attorney's fees, as specified, to any person who was denied the specified rights. Existing law also imposes liability upon a person, firm, or corporation that denies or interferes with admittance to, or enjoyment of, public facilities or otherwise interferes with the rights of an individual with a disability, as specified, for damages and attorney's fees to a person who was denied those rights. This bill would grant to an entity an affirmative defense to a claim seeking statutory damages under the provisions described above on the basis of a specific accessibility barrier on the entity's internet website, as defined, if the entity provided evidence to the

plaintiff demonstrating within 30 days of receiving a written prelawsuit demand from the plaintiff that either (1) the entity published a digital accessibility report on the accessibility page of its internet website disclosing the specific access barrier and updated that report to reflect remediation of the access barrier or (2) that various things were true regarding the entity's efforts to identify and remediate access barriers on its internet website, including the entity had a reasonable and good faith basis to believe that the internet website was accessible and conformed with the internet website accessibility standard, as specified. [AB 2216](#) ([Aguiar-Curry, D](#)) Sacramento-San Joaquin Delta Conservancy.

Introduced: 02/19/2026

Last Amended: 06/15/2026

Status: 06/15/2026 - From committee chair, with author's amendments: Amend, and re-refer to committee. Read second time, amended, and re-referred to Com. on N.R. & W.

Location: 06/03/2026 - Senate Natural Resources and Water

Summary: Existing law establishes in the Natural Resources Agency the Sacramento-San Joaquin Delta Conservancy. Existing law requires the conservancy to act as a primary state agency to implement ecosystem restoration in the Delta and to support efforts that advance environmental protection and the economic well-being of Delta residents. Existing law specifies the composition of the governing board of the conservancy, including 11 voting members, and requires liaison advisers to serve in an advisory, nonvoting capacity. Existing law requires the conservancy to prepare and adopt a strategic plan to achieve the goals of the conservancy and requires the strategic plan to be consistent with certain plans. Existing law authorizes the conservancy to engage in partnerships with nonprofit organizations, local public agencies, and landowners, and authorizes the conservancy to provide grants and loans to state agencies, local public agencies, and nonprofit organizations to further the goals of the conservancy. Existing law establishes the Sacramento-San Joaquin Delta Conservancy Fund in the State Treasury. Existing law makes moneys in the fund available, upon appropriation by the Legislature, for purposes of these provisions. This bill would expand the area covered by the conservancy to include the Valley and Lake, as defined. The bill would rename the conservancy the Valley, Lake, and Delta Conservancy and make conforming changes. The bill would rename the Sacramento-San Joaquin Delta Conservancy Fund the Delta Conservancy Fund and create the Valley and Lake Conservancy Fund in the State Treasury, moneys in which would be available upon appropriation by the Legislature for purposes of the conservancy in the Valley and Lake. The bill would add to the governing board one additional voting member who is appointed by the Lake County Board of Supervisors and one who is a tribal representative appointed by the Governor, subject to confirmation by the Senate. [AB 2231](#) ([Ahrens, D](#)) California Environmental Quality Act: hospital projects.

Introduced: 02/19/2026

Last Amended: 04/22/2026

Status: 06/10/2026 - Referred to Coms. on E.Q. and JUD.

Location: 06/10/2026 - Senate Environmental Quality

Summary: The California Environmental Quality Act (CEQA) requires a lead agency, as defined, to prepare, or cause to be prepared, and certify the completion of an environmental impact report (EIR) on a project that it proposes to carry out or approve that may have a significant effect on the environment or to adopt a negative declaration if it finds that the project will not have that effect. CEQA also requires a lead agency to prepare a mitigated negative declaration for a project that may have a significant effect on the environment if revisions in the project would avoid or mitigate that effect and there is no substantial evidence that the project, as revised, would have a significant effect on the environment. CEQA establishes administrative procedures for the review and certification of the EIR for a project and judicial review procedures for any action or proceeding brought to challenge the lead agency's decision to certify the EIR or to grant project approvals. This bill would establish streamlined procedures for the administrative and judicial review of the environmental review and approvals granted for an environmental leadership hospital campus project, defined by the bill as a construction project of a

hospital campus in the City of Emeryville or of the City of Santa Clara, under certain conditions. The bill would require the city council of the City of Emeryville or of Santa Clara, as the lead agency for the hospital campus project, to certify the project for the streamlined judicial review, as specified, if it finds the project will meet those conditions. The bill would require the project applicant of the environmental leadership hospital campus project to take certain actions in order for those specified procedures to apply to the project. Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 5/6/2026)

Location: 05/14/2026 - Assembly DEAD

Summary: The California Coastal Act of 1976 generally requires each local government lying in whole or in part within the coastal zone to prepare a local coastal program for that portion of the coastal zone within its jurisdiction. The act requires a land use plan of a proposed local coastal program to be submitted to the California Coastal Commission for certification. Existing law requires local governments lying in whole or in part within the coastal zone to, on or before January 1, 2034, develop a sea level rise plan with specified required content as part of a local coastal program that is subject to approval by the California Coastal Commission. This bill would authorize local governments lying, in whole or in part, within the coastal zone to include a neighborhood-scale adaptation approach, as defined, when including land use policies and implementation measures in their local coastal program or sea level rise plan, as provided. Location: 04/30/2026 - Assembly DEAD

Summary: Existing law prescribes requirements for the disposal of surplus land by a local agency. Existing law provides that an agency is not required to follow certain requirements for the disposal of surplus land for “exempt surplus land,” as defined. Under existing law, “exempt surplus land” includes surplus land that is subject to a valid legal restriction that is not imposed by the local agency and that makes housing prohibited, unless there is a feasible method to satisfactorily mitigate or avoid the prohibition on the site, as specified. Existing law specifies that valid legal restrictions for these purposes include existing leases, or other contractual obligations or restrictions, if the terms were agreed to prior to September 30, 2019. This bill would specify that the requirements of an option agreement are among the contractual obligations or restrictions described above. (Based on 03/19/2026 text)

Status: 06/10/2026 - Referred to Com. on N.R. & W.

Location: 06/10/2026 - Senate Natural Resources and Water

Summary: Existing law requires the Wildfire and Forest Resilience Task Force, including the Natural Resources Agency, the California Environmental Protection Agency, the Office of Planning and Research, and the Department of Forestry and Fire Protection, in coordination with certain public agencies, to develop a comprehensive implementation strategy to track and ensure the achievement of the goals and key actions identified in California’s Wildfire and Forest Resilience Action Plan, as provided. Existing law requires the task force, on or before March 1, 2026, and every 5 years thereafter, to update that action plan, as provided. Existing law establishes, in the Department of Conservation, a Regional Forest and Fire Capacity Program to support regional leadership to build local and regional capacity and develop, prioritize, and implement strategies and projects that create fire-adapted communities and landscapes, as provided. Existing law requires the department to, upon appropriation by the Legislature for purposes of the program, provide block grants to regional entities, as defined, to develop regional strategies that develop governance structures, identify wildfire risks, foster collaboration, and prioritize and implement projects within the region to achieve the goals of the program, as specified. Existing law authorizes the regional entities, as defined, to implement activities pursuant to this program, directly or by providing subgrants or contracts, and collaborative planning efforts with local entities to accomplish development of regional priority strategies, among other objectives. Existing law authorizes the department, department to, until July 1, 2025, to authorize advance payments of grants awarded pursuant to the program. This bill would authorize the Director of the Department of Conservation to directly award regional landscape grants to regional entities to implement the above-described regional priority strategies. [AB 2573](#) ([Sharp-Collins, D](#)) Voter registration information: elected officials and candidates.

Introduced: 02/20/2026

Last Amended: 05/19/2026

Status: 06/10/2026 - Referred to Com. on E. & C.A.

Location: 06/10/2026 - Senate Elections and Constitutional Amendments

Summary: Under existing law, the residence address, telephone number, and email address of a registered voter is confidential, except that under certain circumstances a county elections official must disclose that information to any candidate for federal, state, or local office, to any committee for or against any initiative or referendum measure, and to any person for election, scholarly, journalistic, political, or governmental purposes. Existing law exempts from that disclosure requirement the residence address, telephone number, and email address of a federal, state, or local elected official or candidate, unless the official or candidate opts out or the information is sought for bona fide journalistic or governmental purposes. This bill would recast the provisions creating that exemption. The bill would permit the information of an elected official's immediate family member who lives at the same residence to be made confidential. For an elected official or candidate's residence address, telephone number, and email address to be confidential, the elected official or candidate would be required to make a written request to the county elections official, and a candidate would also need to qualify to appear on the ballot. The Secretary of State would be required to notify county elections officials when a state or federal candidate qualifies to appear on the ballot, and it would require county elections officials to notify the Secretary of State under certain circumstances if the confidential designation is added to, or removed from, a federal or state elected official or candidate's voter registration record. Location: 04/13/2026 - Assembly Utilities and Energy

Summary: Existing law requires the State Energy Resources Conservation and Development Commission to submit an assessment to the Legislature, on or before January 1, 2024, and every 3 years thereafter, regarding transportation fuels in the state. Existing law requires that the first assessment submitted after January 1, 2026, evaluate the cost and supply impacts of allowing the sale of gasoline with alternative specifications to support a reliable and affordable supply of transportation fuels in California, and, if the evaluation finds that allowing the sale of gasoline with alternative specifications is likely to support a reliable and affordable supply of transportation fuels in California, requires the commission, in coordination with the State Air Resources Board, to recommend a strategy to facilitate the sale of gasoline with those alternative specifications that considers, among other things, the use of a fee associated with the sale of gasoline with those alternative specifications to mitigate for any increase in emissions. This bill would require the commission to triennially submit that assessment on or before July 1, rather than January 1, and would require that the commission's recommended strategy's discussion of that fee include recommendations regarding the appropriate fee amount to protect consumers from price impacts and avoid market disruptions. (Based on 04/07/2026 text)

Location: 06/03/2026 - Senate Natural Resources and Water

Summary: The California Safe Drinking Water Act requires the State Water Resources Control Board to administer provisions relating to the regulation of drinking water to protect public health. Existing law declares it to be the established policy of the state that every human being has the right to safe, clean, affordable, and accessible water adequate for human consumption, cooking, and sanitary purposes. This bill would establish in the State Treasury the Water Affordability and System Stabilization Fund for holding the principal and income of the Water Affordability and System Stabilization Trust, which the bill would create. The bill would designate the Treasurer as trustee of the trust, as specified, and would require the trustee, among other things, to hold, manage, and invest the principal of the trust with the obligation of providing a growing perpetual source of annual funding to the Water Rate Assistance Fund, administered by the state board, and the Community Water Affordability Assistance Fund, administered by the department, beginning 25 years after the Legislature transfers funding from the General Fund to the Water Affordability and System Stabilization Fund. This bill would require, during the first

25 years following the Legislature's transfer, 45% of the income of the trust to be transferred from the Water Affordability and System Stabilization Fund to each of the Water Rate Assistance Fund and the continuously appropriated Community Water Affordability Assistance Fund, and would continuously appropriate the remaining 10% of the income of the trust to be invested as part of the principal of the trust. After the first 25 years, the bill would require 50% of the income of the trust to be transferred from the Water Affordability and System Stabilization Fund to each of the Water Rate Assistance Fund and the Community Water Affordability Assistance Fund. The bill would continuously appropriate no more than 1% of the annual income of the trust to pay for administration of the trust. (Based on 06/11/2026 text)

Last Amended: 03/26/2026

Status: 06/03/2026 - Referred to Com. on E.Q.

Location: 06/03/2026 - Senate Environmental Quality

Summary: Existing law establishes the State Water Pollution Control Revolving Fund program, pursuant to which state and federal funds are continuously appropriated from the State Water Pollution Control Revolving Fund to the State Water Resources Control Board for loans and other financial assistance for purposes related to the federal Clean Water Act. Existing law establishes the State Water Pollution Control Revolving Fund Administration Fund (administration fund) to provide funds, upon appropriation by the Legislature, to be expended by the state board for payment of the reasonable costs of administering the State Water Pollution Control Revolving Fund. Existing law authorizes the state board to assess an annual charge for financial assistance services, not to exceed 1% of the financial assistance repayment amount and computed according to the true interest cost method, as provided, and requires those annual charges to be deposited into the administration fund. Existing law authorizes the financial service rate to be applied at any time during the term of the financial assistance and requires the rate to remain unchanged for the duration of the financial assistance. Existing law prohibits the financial assistance rate from increasing the financial assistance repayment amount after being applied. Existing law requires the state board to, at least once each fiscal year, adjust the financial assistance service rate. Existing law requires the state board to set the total amount of revenue collected each year through the annual charges at an amount that is equal as practicable to the appropriation amount set forth in the annual Budget Act. This bill would additionally authorize the state board to assess fees in place of an annual charge for financial assistance and would authorize the fees or annual charge to be assessed at any rate as permitted by federal law. Status: 06/10/2026 - Read second time and amended. Re-referred to Com. on L. GOV.

Location: 06/09/2026 - Assembly Local Government

Summary: Existing law authorizes cities and counties, subject to certain limitations and approval requirements, to levy a transactions and use tax for general or specific purposes in accordance with the procedures and requirements set forth in the Transactions and Use Tax Law, including a requirement that the combined rate of all taxes that may be imposed in accordance with that law in the jurisdiction not exceed 2%. This bill would authorize, until December 31, 2031, 2030, or December 31, 2031, as specified, various jurisdictions to levy taxes pursuant to the Transactions and Use Tax Law at specified rates, as prescribed. The bill would authorize those taxes to exceed the 2% limit described above. (Based on 06/10/2026 text)

[SB 769](#) ([Caballero, D](#)) The Golden State Infrastructure Corporation Act.

Introduced: 02/21/2025

Last Amended: 07/02/2025

Status: 09/04/2025 - Ordered to inactive file on request of Assembly Member Aguiar-Curry.

Location: 09/04/2025 - Assembly INACTIVE FILE

Summary: The Bergeson-Peace Infrastructure and Economic Development Bank Act authorizes the California Infrastructure and Economic Development Bank, governed by a board of directors, to make loans, issue bonds, and provide other financial assistance for various types of infrastructure and economic development projects. Current law establishes the California Infrastructure and Economic Development Bank Fund, a continuously appropriated fund, to support the bank. This bill would enact the Golden State Infrastructure Corporation Act and would establish the Golden State Infrastructure Corporation, within the State Treasurer's Office, as a not-for-profit corporation for the purpose of administering the act and financing infrastructure projects. The bill would require the corporation to be governed by a board of directors, with a prescribed membership, and would require the business and affairs of the corporation to be managed by an executive director appointed by the Treasurer. This bill would prescribe the powers and duties of the corporation, including entering into financing transactions, borrowing money or issuing bonds, and setting and charging fees for obtaining financing from the corporation. Under the bill, the state would not in any way be liable for any obligation of the corporation, and the corporation would not be required to pay any taxes, except as provided. [SB 795](#) ([Richardson, D](#)) Workers' compensation: professional athletes.

Introduced: 02/21/2025

Last Amended: 05/18/2026

Status: 06/10/2026 - June 17 hearing postponed by committee.

Location: 05/18/2026 - Assembly Insurance

Summary: Existing law establishes a workers' compensation system, administered by the Administrative Director of the Division of Workers' Compensation, to compensate an employee, as defined, for injuries sustained in the course of employment. Existing law provides that an injury may be either "specific," occurring as the result of one incident or exposure that causes disability or need for medical treatment, or "cumulative," occurring as repetitive mentally or physically traumatic activities extending over a period of time, the combined effect of which causes any disability or need for medical treatment. Existing law exempts an employee hired outside of this state and their employer from the occupational disease and cumulative injury provisions of this state's workers' compensation laws if (1) the employee is a professional athlete, defined for purposes of these provisions to include an athlete who is employed at the minor or major league level in the sport of baseball, basketball, football, ice hockey, or soccer, (2) that professional athlete is temporarily within this state doing work for their employer, and (3) the employer has furnished workers' compensation insurance under the laws of the state other than California that covers the professional athlete's employment while in this state, except as specified. Existing law deems a professional athlete to be temporarily within the state doing work for their employer if, during the 365 consecutive days immediately preceding the professional athlete's last day of work for the employer within the state, the professional athlete performs less than 20% of their duty days, as defined, in the state. This bill would revise and recast the above provisions to state that the professional athlete and their employer are exempt from the workers' compensation system for any claim that involves occupational disease or cumulative injury made by the athlete, if the athlete did not perform any work in California or the athlete was temporarily within the state working for their employer. [SB 833](#) ([McNerney, D](#)) Critical infrastructure: artificial intelligence systems: human oversight.

Introduced: 02/21/2025 (Spot bill)

Last Amended: 07/17/2025

Status: 08/28/2025 - Failed Deadline pursuant to Rule 61(a)(11). (Last location was APPR. SUSPENSE FILE on 8/20/2025)(May be acted upon Jan 2026)

Location: 08/28/2025 - Assembly 2 YEAR

Summary: Existing law, the California Emergency Services Act, establishes the California Cybersecurity Integration Center within the Office of Emergency Services to serve as the central organizing hub of state government's cybersecurity activities and to coordinate information sharing with various entities. Existing law also requires the Technology Recovery Plan element of the State Administrative Manual to ensure the inclusion of

cybersecurity strategy incident response standards for each state agency to secure its critical infrastructure controls and information, as prescribed. This bill would require, on or before July 1, 2026, an operator, defined as a state agency responsible for operating, managing, overseeing, or controlling access to critical infrastructure, that deploys a covered artificial intelligence (AI) system, as defined, to establish a human oversight mechanism that ensures a human monitors the system's operations in real time and reviews and approves any plan or action proposed by the covered AI system before execution, except as provided. The bill would require the Department of Technology to develop specialized training in AI safety protocols and risk management techniques to oversight personnel. The bill would require oversight personnel for an operator to conduct an annual assessment of its covered AI systems, as specified, and to submit a summary of the findings to the department. The bill would make findings and declarations related to its provisions. This bill contains other related provisions and other existing laws. (Based on 07/17/2025 text)

[SB 1048](#) ([Becker, D](#)) State Seal of Climate Literacy.

Introduced: 02/12/2026

Last Amended: 04/06/2026

Status: 05/26/2026 - Referred to Com. on ED.

Location: 05/26/2026 - Assembly Education

Summary: Existing law establishes the State Seal of Civic Engagement to recognize pupils who have demonstrated excellence in civics education and participation and have demonstrated an understanding of the United States Constitution, the California Constitution, and the democratic system of government, as provided, and establishes the State Seal of Biliteracy to recognize high school graduates who have attained a high level of proficiency in speaking, reading, and writing in one or more languages in addition to English. This bill would establish the State Seal of Climate Literacy for the purpose of giving high school pupils personal agency to help them and their communities understand and adapt to the effects of climate change. The bill would require the Superintendent of Public Instruction, on or before March 15, 2027, to recommend to the State Board of Education criteria for awarding a State Seal of Climate Literacy to pupils who have demonstrated mastery in climate literacy disciplines, green skills or technical green skills, as defined, and any and all other best practices for climate literacy. The bill would require the Superintendent, in developing the criteria, to consider including (1) the successful completion of at least 2 approved courses in the area of climate literacy and (2) the successful completion and presentation of a climate literacy final experiential learning project, as provided. The bill would require the Superintendent to also recommend to the state board the criteria necessary to award a State Seal of Climate Literacy with specified distinctions. The bill would require the state board, on or before May 1, 2027, to adopt, or adopt with modifications, the criteria recommended by the Superintendent. The bill would require the Superintendent to, among other things, prepare and deliver to participating local educational agencies an

appropriate insignia to be affixed to the diploma or transcript of the pupil indicating that the pupil has been awarded a State Seal of Climate Literacy by the Superintendent. (Based on 04/06/2026 text)

[SB 1117](#) ([Cervantes, D](#)) Accessory dwelling units and junior accessory dwelling units.

Introduced: 02/17/2026

Status: 06/10/2026 - From committee: Do pass and re-refer to Com. on L. GOV. (Ayes 10. Noes 0.) (June 10). Re-referred to Com. on L. GOV.

Location: 06/10/2026 - Assembly Local Government

Summary: The Planning and Zoning Law provides for the creation by ordinance, or by ministerial approval if the local agency has not adopted an ordinance, of an accessory dwelling unit (ADU) in accordance with specified standards and conditions. Current law requires fees charged for the construction of ADUs to be determined in accordance with specified provisions of the Mitigation Fee Act. Current law prohibits a local agency, special district, or water corporation from imposing any impact fee upon the development of an ADU that has 750 square feet of interior livable space or less, and requires any impact fees charged for an ADU that has more than 750 square feet of interior livable space to be charged proportionately in relation to the square footage of the primary dwelling unit. This bill would additionally require the charge to be based only on the area in excess of 750 square feet of interior livable space. By changing the duties of local agencies with regard to calculating fees for ADUs, the bill would impose a state-mandated local program. (Based on 02/17/2026 text)

Last Amended: 05/14/2026

Status: 06/08/2026 - Ordered to inactive file.

Location: 06/08/2026 - Senate INACTIVE FILE

Summary: Existing law establishes requirements with respect to public contracts that apply when a public entity is required by statute or regulation to obtain an enforceable commitment that a bidder, contractor, or other entity will use a skilled and trained workforce to complete a contract or project, as specified. Existing law requires a public entity subject to skilled and trained workforce requirements to include a specified notice in all bid documents. Existing law specifies that a failure of a public entity to include the required notice that a project is subject to the skilled and trained workforce requirement does not excuse a public entity from those requirements.

This bill would expand the circumstances under which those requirements apply to specified instruments and laws, including development agreements and resolutions, as provided. The bill would, in addition to the specified notice in bid documents, require a public entity to post, or require a prime contractor to post, a job site notice specifying that the project is subject to the skilled and trained workforce requirement. The bill would also extend the same posting and notice requirement to private developers. The bill would impose a penalty of no more than \$10,000 per month on a private developer who failed to comply with the above-described posting or notice requirement, following an investigation by the Labor Commissioner or its designee. Location: 05/14/2026 - Senate DEAD

Summary: The Mutual Water Company Open Meeting Act requires a board of directors of a mutual water company that operates a public water system to allow an eligible person, as defined, to personally attend a meeting of the board, if the eligible person gave the board at least 24 hours' advance written notice of their intent to personally attend the meeting. Existing law authorizes the board to allow an eligible person who was denied attendance at a meeting for failure to provide this notice, or because the number of eligible persons having already provided notice of attendance exceeds the room capacity of the place of the meeting, to attend the meeting by teleconference. Existing law requires the board to provide to an eligible person attending a meeting by teleconference a copy of the documents to be discussed at the meeting, except as specified. This bill would eliminate the 24-hour notice requirement for an eligible person to personally attend a meeting. The bill would authorize the board of directors of a mutual water company with less than 50 connections to use teleconferencing to provide any eligible person access to the meeting and would require a board of directors of a mutual water company with 50 or more connections to use teleconferencing to provide any eligible person access to the meeting. [SB 1317](#) ([Arreguín, D](#)) Exempt surplus land: locally owned land

Introduced: 02/20/2026

Status: 04/30/2026 - Failed Deadline pursuant to Rule 61(b)(6). (Last location was L. GOV. on 3/4/2026)

Location: 04/30/2026 - Senate DEAD

Summary: Existing law prescribes requirements for the disposal of surplus land by a local agency. Existing law defines "surplus land" for these purposes to mean land owned in fee simple by any local agency for which the local agency's governing body takes formal action in a regular public meeting declaring that the land is surplus and is not necessary for the agency's use. Existing law provides that an agency is not required to follow certain requirements for the disposal of surplus land for "exempt surplus land," as defined. Existing law, the Property and Business Improvement District Law of 1994, authorizes local governmental entities to establish a property and business improvement district to levy assessments on properties and businesses within the district for the purpose of financing certain improvements and promoting activities that benefit property in the district. Existing law requires the California Environmental Protection Agency to identify disadvantaged communities for investment opportunities from the Greenhouse Gas Reduction Fund and for other purposes. This bill would define "exempt surplus land" to include surplus land that is owned by a local agency and is located within a property and business improvement district designated pursuant to the Property and Business Improvement District Law of 1994 and a disadvantaged community identified by the California Environmental Protection Agency pursuant to the above-referenced provisions. (Based on 02/20/2026 text)

[SB 1394](#) ([Gonzalez, D](#)) State holidays: Cesar Chavez Day: Farmworkers Day.**Introduced:** 02/20/2026**Last Amended:** 06/11/2026**Status:** 06/15/2026 - Re-referred to Com. on G.O. pursuant to Assembly Rule 96.**Location:** 06/15/2026 - Assembly Governmental Organization

Summary: Existing law designates specific days as holidays in this state. Existing law designates holidays on which community colleges and public schools are authorized to close pursuant to a memorandum of understanding between the governing board and represented employees, including Cesar Chavez Day on March 31. Existing law entitles state employees, with specified exceptions, and authorizes certain community college and public school employees, to be given time off with pay for specified holidays, as specified. Existing law redesignates March 31 as Farmworkers Day instead of Cesar Chavez Day, and requires the Governor to annually proclaim March 31 as Farmworkers Day. This bill would remove the designation of March 31 as Cesar Chavez Day for purposes of holidays on which community colleges and public schools are authorized to close, and instead authorize community colleges and public schools to close on August 6, known as Farmworkers Day. (Based on 06/11/2026 text)

Watch-Key**[AB 34](#) ([Patterson, R](#)) California Renewables Portfolio Standard Program: local publicly owned electric utilities: large hydroelectric generation.****Introduced:** 12/02/2024**Last Amended:** 01/05/2026**Status:** 06/10/2026 - Withdrawn from committee. Re-referred to Com. on APPR.**Location:** 06/10/2026 - Senate Appropriations

Summary: The California Renewables Portfolio Standard Program requires retail sellers and local publicly owned electric utilities to procure a minimum quantity of electricity products from eligible renewable energy resources during certain compliance periods up to December 31, 2030. Current law provides that a local publicly owned electric utility is not required to procure a certain amount of eligible renewable energy resources if, during a year within those compliance periods, the local publicly owned electric utility receives more than 40% of its retail sales from large hydroelectric generation under an ownership agreement or contract in effect as of January 1, 2018. Current law authorizes the State Energy Resources Conservation and Development Commission (Energy Commission) to establish appropriate multiyear compliance periods for local publicly owned electric utilities beyond December 31, 2030. This bill would provide that the provision related to the procurement of eligible renewable energy resources by local publicly owned electric utilities also applies to the compliance periods established by the Energy Commission. [AB 372](#) ([Bennett, D](#)) Office of Emergency Services: state matching funds: water system infrastructure improvements.**Introduced:** 02/03/2025**Last Amended:** 08/29/2025**Status:** 09/11/2025 - Failed Deadline pursuant to Rule 61(a)(14). (Last location was INACTIVE FILE on 9/3/2025) (May be acted upon Jan 2026)**Location:** 09/11/2025 - Senate 2 YEAR

Summary: Current law charges the Office of Emergency Services (OES) with coordinating various emergency activities within the state. The California Emergency Services Act, contingent upon an appropriation by the

Legislature, requires the OES to enter into a joint powers agreement pursuant to the Joint Exercise of Powers Act with the Department of Forestry and Fire Protection to develop and administer a comprehensive wildfire mitigation program relating to structure hardening and retrofitting and prescribed fuel modification activities. Current law authorizes the joint powers authority to establish financial assistance limits and matching funding or other recipient contribution requirements for the program, as provided. This bill, contingent upon appropriation by the Legislature, would establish the Rural Water Infrastructure for Wildfire Resilience Program within the OES for the distribution of state matching funds to urban wildland interface communities, as defined, in designated high fire hazard severity zones or very high fire hazard severity zones to improve water system infrastructure, as prescribed. The bill would require the OES to work in coordination with the Department of Water Resources, the State Water Resources Control Board, the Office of the State Fire Marshal, and other state entities as the OES determines to be appropriate, to achieve the purposes of the program. Status: 07/16/2025 - In committee: Hearing postponed by committee. (Set for hearing on 06/23/2026)

Location: 06/16/2026 - Senate Natural Resources and Water

Summary: The California Endangered Species Act prohibits the taking of an endangered, threatened, or candidate species, except as specified. Under the act, the Department of Fish and Wildlife may authorize the take of listed species by certain entities through permits or memorandums of understanding for specified purposes. The act allows take by permit if, among other things, the impact of the authorized take is fully minimized and mitigated. This bill would provide that if an at-risk species, as defined, becomes listed as an endangered, threatened, or candidate species, further authorization or approval shall not be required for a take of that species, if specified conditions are met, including that the potential listing of the at-risk species was anticipated in a permit previously issued by the department for incidental take caused by a renewable electrical generation facility. The bill would authorize the department, in partnership with a permit applicant for an incidental take caused by a renewable electrical generation facility, to develop a research project that evaluates specified factors. The bill would authorize a research project reviewed and approved by the department to contribute to a renewable electrical generation project's mitigation, as provided. (Based on 05/06/2025 text)

Status: 06/10/2026 - Referred to Coms. on L. GOV. and HOUSING.

Location: 06/10/2026 - Senate Local Government

Summary: The Planning and Zoning Law provides for the adoption and administration of zoning laws, ordinances, rules and regulations by counties and cities and the implementation of those general plans as may be in effect in those counties or cities. In that regard, current law requires each local agency, by January 1, 2025, to develop a program for the preapproval of accessory dwelling unit plans. This bill would require each local agency, as defined, to develop a program for the preapproval of single-family and multifamily residential housing plans, whereby the local agency accepts single-family and multifamily plan submissions for preapproval and approves or denies the preapproval applications, as specified. The bill would require a large jurisdiction, as defined, to develop this program by July 1, 2027, and a small jurisdiction, as defined, to develop a program by January 1, 2029. The bill would require the local agency to post preapproved single-family or multifamily residential housing plans and the contact information of the applicant on the local agency's internet website. [AB 1383](#) (McKinnor, D) Public employees' retirement benefits.

Introduced: 02/21/2025

Last Amended: 05/13/2026

Status: 05/13/2026 - From committee chair, with author's amendments: Amend, and re-refer to committee. Read second time, amended, and re-referred to Com. on L., P.E. & R.

Location: 05/06/2026 - Senate Labor, Public Employment and Retirement

Summary: The Public Employees' Retirement Law (PERL) establishes the Public Employees' Retirement System (PERS) to provide a defined benefit to members of the system based on final compensation, credited service, and age at retirement, subject to certain variations. Existing law creates the Public Employees' Retirement Fund, which is continuously appropriated for purposes of PERS, including depositing employer and employee contributions. Under the California Constitution, assets of a public pension or retirement system are trust funds. The California Public Employees' Pension Reform Act of 2013 (PEPRA) establishes a variety of requirements and restrictions on public employers offering defined benefit pension plans. In this regard, PEPRA restricts the amount of compensation that may be applied for purposes of calculating a defined pension benefit for a new member, as defined, by restricting it to specified percentages of the contribution and benefit base under a specified federal law with respect to old age, survivors, and disability insurance benefits. Existing law, the Teachers' Retirement Law, establishes the State Teachers' Retirement System (STRS) and creates the Defined Benefit Program of the State Teachers' Retirement Plan, which provides a defined benefit to members of the program, based on final compensation, creditable service, and age at retirement, subject to certain variations. This

bill, for service performed on and after January 1, 2027, would prohibit the pensionable compensation for calendar year 2027 used to calculate the defined benefit paid to a new member of a retirement system subject to PEPRA who retires from the system from exceeding specified percentages of the contribution and benefit base under the specified federal law with respect to old age, survivors, and disability insurance benefits. Status: 06/10/2026 - Referred to Com. on JUD. From committee chair, with author's amendments: Amend, and re-refer to committee. Read second time, amended, and re-referred to Com. on JUD.

Location: 06/10/2026 - Senate Judiciary

Summary: The California Public Records Act requires each state or local agency, upon a request for a copy of records that reasonably describes an identifiable record or records, to make the records promptly available to any person upon payment of fees covering direct costs of duplication, or a statutory fee if applicable, except with respect to public records exempt from disclosure by express provisions of law. This bill would require an agency to designate a physical office location and a specified email address for the submission of requests, and authorize an agency to designate other reasonable methods for the submission of requests, including submission to a physical mailing address, subject to certain requirements, including that the agency accept upon receipt any request that is submitted at the designated physical office location or through the designated email address during the agency's normal business hours. If an agency designates any method for the submission of requests, the bill would deem a request as properly requested for purposes of specified provisions only if the request was submitted through a method of submission that was designated by the agency. If the agency finds that a request was not submitted through a method of submission that was designated by the agency, the bill would deem the request as not properly requested at the time of submission and not subject to specified timelines otherwise applicable to the request had it been properly requested, except as specified. The bill would require an agency to provide notice to the public of any updates or changes to any method for the submission of requests designated by the agency by posting the updates or changes on its internet website. Introduced: 02/12/2026

Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 4/22/2026)

Location: 05/14/2026 - Assembly DEAD

Summary: Existing law requires the Department of Forestry and Fire Protection to establish a local assistance grant program for fire prevention and home hardening education activities in California and extends eligibility for grants to specified entities, including local agencies. Existing law provides that eligible activities under the local assistance grant program include, among other things, technical assistance to local agencies to improve fire prevention and reduce fire hazards and projects to improve public safety, including, but not limited to, access to emergency equipment and improvements to public evacuation routes. Existing law makes funding for this program subject to an appropriation by the Legislature. This bill would expand eligible activities under the local assistance grant program to include projects undertaken by a local governmental entity involving the acquisition or installation of mobile rigid dip tanks or similar mobile and permanent infrastructure that is capable of providing helicopter-accessible water supplies for firefighting response or suppression purposes in very high fire and high fire hazard severity zones, as provided. [AB 1898](#) ([Schultz, D](#)) Workplace artificial intelligence tools.

Introduced: 02/12/2026

Last Amended: 03/20/2026

Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 4/29/2026)

Location: 05/14/2026 - Assembly DEAD

Summary: Would require an employer to provide a written notice to a worker that a workplace AI tool, as defined, was used to assist the employer in making employment-related decisions or to surveil workers in the workplace. The bill would require the notice to be given to a worker within a specified time and would require the notice to contain specified information, including the specific employment-related decisions likely to be affected by the use of the workplace AI tool. The bill would require an employer to maintain an updated list of all workplace AI tools currently in use and their impact on jobs, as specified, and to provide the list to workers annually. The bill would provide for enforcement by the Labor Commissioner or a public prosecutor, and alternatively would authorize any worker who has suffered damages, or their exclusive representative, to file a civil action for damages caused by the adverse action. The bill would establish remedies and penalties for violations, including a penalty of up to \$500 for each violation. (Based on 03/20/2026 text)

[AB 2026](#) ([Aguiar-Curry, D](#)) Water diversion: groundwater recharge: permit.

Introduced: 02/17/2026

Last Amended: 05/22/2026

Status: 06/10/2026 - Referred to Coms. on N.R. & W. and E.Q.

Location: 06/10/2026 - Senate Natural Resources and Water

Summary: Existing law prohibits an entity from substantially diverting or obstructing the natural flow of, or substantially changing or using any material from the bed, channel, or bank of, any river, stream, or lake, or from depositing or disposing of certain material where it may pass into any river, stream, or lake, without first notifying the Department of Fish and Wildlife of that activity, and entering into a lake or streambed alteration agreement if required by the department to protect fish and wildlife resources, except as specified. This bill would revise and recast those conditions required for the appropriative water right exemption for a diversion of floodflows for groundwater recharge, would apply the requirements to a diversion commenced before January 1, 2034, and

would further exempt those diversions from the requirements of the California Environmental Quality Act (CEQA) and requirements relating to lake or streambed alteration agreements, subject to conducting tribal consultation, as provided. The bill would expand the definition of “floodflow” to include flows downstream of a dam that is releasing water for flood control purposes, as provided. (Based on 05/22/2026 text)

Status: 06/10/2026 - Referred to Com. on N.R. & W.

Location: 06/10/2026 - Senate Natural Resources and Water

Summary: Existing law establishes the Natural Resources Agency and vests the agency with jurisdiction over various public resources. Existing law establishes the California Environmental Protection Agency and sets out its mission for programs, policies, and standards. Under existing law, various state entities, including the California Coastal Commission, the California Environmental Protection Agency, and the Department of Fish and Wildlife have responsibilities with respect to coastal permitting and development. This bill would require the Secretary of the Natural Resources Agency, in consultation with the Secretary for Environmental Protection, to convene a Coastal Resilience Permitting Working Group for the purpose of developing a Coastal Resilience Permitting Roadmap for coastal resilience projects proposed in specified areas. The bill would require the Coastal Resilience Permitting Working Group to consist of representatives from federal, state, and local agencies, including, among others, the California Coastal Commission, the California Environmental Protection Agency, and the Department of Fish and Wildlife. The bill would, on or before January 1, 2028, require the Secretary of the Natural Resources Agency to submit the Coastal Resilience Roadmap to the Governor and the relevant fiscal and policy committees of the Legislature. Introduced: 02/18/2026

Last Amended: 03/25/2026

Status: 06/10/2026 - From committee: Do pass and re-refer to Com. on N.R. & W. with recommendation: To Consent Calendar. (Ayes 12. Noes 0.) (June 9). Re-referred to Com. on N.R. & W.

Location: 06/09/2026 - Senate Natural Resources and Water

Summary: Existing law requires a plaintiff who files an action to comprehensively determine rights to extract groundwater from a basin to provide the court a draft notice of commencement of groundwater basin adjudication and a draft form answer to adjudication complaint, as specified. Existing law also requires a plaintiff to file, within a specified timeframe, a motion for approval of the draft notice and draft form answer. Under existing law, once the court approves the draft notice, the plaintiff is required to serve the notice, as specified. Following a court order approving both the notice and draft form answer and authorizing service thereof, existing law requires the plaintiff to take additional steps to provide notice to defendants including, but not limited to, mailing, by registered mail or certified mail, return receipt requested, the notice, complaint, and form answer to all holders of fee title to real property in the basin. Under existing law, if a return receipt is not received for a parcel of real property, the plaintiff must post a copy of the notice, complaint, and form answer in a conspicuous place on the real property. After completing these notice procedures, existing law requires the plaintiff to file a notice of completion of the mailing with the court. Existing law permits a court to authorize any other procedures it finds appropriate and necessary to provide notice to persons who may hold groundwater rights in basin. This bill would impose additional requirements on a plaintiff when filing the notice of completion of mailing. The bill would require the plaintiff to include with the notice of completion an affidavit of the person who mailed the notice and the certified or registered mail delivery receipt for each parcel stating the date, time, and place of mailing. The bill would further require the notice to include as an attachment any certified or registered mail delivery receipts received as of the date of the filing. (Based on 03/25/2026 text)

AB 2180 **(Ward, D) Local government: Proposition 218 Omnibus Implementation Act: proportional cost of service.**

Introduced: 02/19/2026

Last Amended: 05/22/2026

Status: 06/11/2026 - Read second time. Ordered to third reading.

Location: 06/11/2026 - Senate THIRD READING

Summary: The California Constitution specifies various requirements with respect to the levying of assessments and property-related fees and charges by a local agency. As part of those requirements, the California Constitution mandates that such fees or charges that are extended, imposed, or increased satisfy certain requirements, including, but not limited to, that the amount of the fee or charge imposed upon any parcel or person as an incident of property ownership not exceed the proportional cost of the service attributable to the parcel. Existing law, known as the Proposition 218 Omnibus Implementation Act (act), prescribes specific procedures and parameters for local jurisdictions to comply with these requirements and, among other things, authorizes an agency providing water, wastewater, sewer, or refuse collection services to adopt a schedule of fees or charges authorizing automatic adjustments that pass through increases in wholesale charges for water, sewage treatment, or wastewater treatment or adjustments for inflation under certain circumstances. This bill would authorize a local government to demonstrate the proportional cost of the service attributable to the parcel by any method that reasonably allocates the ascertainable cost of providing service to all parcels, if substantiated as provided. The bill would, however, provide that for water or sewer service fee or charge impositions, a local government is not required to provide an exact measure of the cost of the service at each parcel and may instead impose uniform or tiered rates to parcel or customer classes that are defined based on common characteristics indicative of likely water or sewer use. Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 5/6/2026)

Location: 05/14/2026 - Assembly DEAD

Summary: Under existing law, the Porter-Cologne Water Quality Control Act, the State Water Resources Control Board and the California regional water quality control boards are the principal state agencies with authority over matters relating to water quality. The act requires the state board to formulate and adopt state policies for water quality control and requires the regional boards to adopt regional water quality control plans in compliance with the state policies. Under the act, the state board and the regional boards prescribe waste discharge requirements for the discharge of waste that could affect the quality of the waters of the state. This bill would require the State Water Resources Control Board to require the regional boards to update the Irrigated Lands Regulatory Program in order to reduce nitrogen waste discharges from commercial irrigated agricultural areas, as provided. The bill would require the regional boards to adopt revised orders with waste discharge requirements on or before January 1, 2028, that are sufficient to meet certain reductions in nitrogen waste discharges. The bill would require the state board to, on or before July 1, 2027, publish both a list of standardized crop names and categories, and a statewide methodology for calculating, and field-level reporting of, nitrogen balances for croplands, including nitrogen fertilizer applications and nitrogen discharges, that account for available soil nitrogen, to be used by the regional boards and incorporated into the revised orders. Introduced: 02/20/2026

Last Amended: 06/08/2026

Status: 06/08/2026 - From committee chair, with author's amendments: Amend, and re-refer to committee. Read second time, amended, and re-referred to Com. on JUD.

Location: 05/27/2026 - Senate Judiciary

Summary: The Safe Drinking Water and Toxic Enforcement Act of 1986, an initiative measure approved by the voters as Proposition 65 at the November 4, 1986, statewide general election, prohibits a person, in the course of doing business, from knowingly and intentionally exposing any individual to a chemical known to the state to cause cancer or reproductive toxicity without giving a specified warning, or from knowingly discharging or releasing that chemical into water, or into or onto land and passing into any source of drinking water, except as specified. The act authorizes a person, acting in the public interest, to bring an action to enforce the requirements of the act if specified requirements are met. If there is a settlement of an action brought by a person in the public interest the act requires the plaintiff to submit the settlement to the court for approval upon noticed motion, and authorizes the court to approve the settlement only if the court makes specified findings, as provided, including that the award of attorney's fees is reasonable under state law. This bill would additionally require the court to find that the award of attorney's fees is appropriate under state law and that the settlement is in the public interest and provides a public benefit. The bill would further require, under a specified circumstance, the court to find that the settlement would require the defendant to reduce the exposure to the listed chemical from the level that existed before the settlement or provide a warning that complies with the act if that warning was not provided previously. Location: 04/23/2026 - Assembly DEAD

Summary: Existing law authorizes the State Water Resources Control Board to adopt regulations requiring measurement and reporting of water diversion and use by persons, including, among others, those authorized to appropriate water under a permit, a license, a registration for small domestic, small irrigation, or livestock stockpond use, or a certificate for livestock stockpond use. For the initial regulations, existing law requires that they be adopted as emergency regulations and provides that the emergency regulations remain in effect until revised by the state board. Existing law also exempts the initial regulations from the California Environmental Quality Act. This bill would require, until January 1, 2032, that all further regulations adopted by the state board pursuant to these provisions be adopted as emergency regulations and remain in effect until revised by the state board, and would exempt them from the California Environmental Quality Act. Location: 06/10/2026 - Senate Labor, Public Employment and Retirement

Summary: Executive Order No. N-12-23 requires specified state agencies, in collaboration with other state agencies and their workforce, to draft a report to the Governor examining the most significant, potentially beneficial use cases for deployment of generative artificial intelligence (GenAI) tools by the state. The executive order requires the report to explain the potential risks to individuals, communities, and government and state government workers, and requires the report to be regularly assessed and updated in consultation with, among others, the state government workforce or organizations that represent state government employees, as specified. Chapter 928 of the Statutes of 2024, the Generative Artificial Intelligence Accountability Act, requires specified state agencies to update the report, as needed, to respond to significant developments and to consult with specified parties, including organizations that represent state exclusive employee representatives. This bill would require certain state and local public employers to provide written notice to a recognized employee organization at

least 45 days before taking an action to develop, purchase, implement, or utilize GenAI to perform a service that is within the scope of work of the job classification represented by the recognized employee organization. (Based on 04/14/2026 text)

Status: 08/28/2025 - Failed Deadline pursuant to Rule 61(a)(11). (Last location was APPR. SUSPENSE FILE on 7/2/2025)(May be acted upon Jan 2026)

Location: 08/28/2025 - Assembly 2 YEAR

Summary: Current law establishes the Office of Land Use and Climate Innovation in the Governor's office for the purpose of serving the Governor and the Governor's cabinet as staff for long-range planning and research and constituting the comprehensive state planning agency. Current law authorizes a local agency to finance infrastructure projects through various means, including by authorizing a city or county to establish an enhanced infrastructure financing district to finance public capital facilities or other specified projects of communitywide significance that provide significant benefits to the district or the surrounding community. This bill would require the office, upon appropriation by the Legislature, to establish the Infrastructure Gap-Fund Program to provide grants to local agencies for the development and construction of infrastructure projects, as defined, facing unforeseen costs after starting construction. The bill would authorize the office to provide funding for up to 20% of a project's additional projected cost, as defined, after the project has started construction, subject to specified conditions, including, among other things, that the local agency has allocated existing local tax revenue for at least 45% of the initially budgeted total cost of the infrastructure project. When applying to the program, the bill would require the local agency to demonstrate challenges with completing the project on time and on budget and how the infrastructure project helps meet state and local goals, as specified. Status: 06/05/2025 - Referred to Com. on W. P., & W.

Location: 06/05/2025 - Assembly Water, Parks and Wildlife

Summary: (1)The California Wildlife, Coastal, and Park Land Conservation Act, an initiative measure approved by the voters in the June 7, 1988, statewide primary election, provided bond funds for wildlife, coastal, and parkland conservation. The initiative measure authorizes the act to be amended by a 2/3 vote of the Legislature if the amendment is consistent with the purposes of the act. Existing law requires an applicant receiving state funds under the act to maintain any property acquired in perpetuity, as specified, to use the property only for the purposes stated in the act, and to make no other use, sale, or other disposition of the property except as authorized by a specific act of the Legislature. Existing law authorizes the County of San Bernardino to sell or exchange property it owns within the Chino Agricultural Preserve that was purchased with grant funds if it meets certain conditions. This bill would additionally authorize preservation of those lands or easements for park and recreational purposes, and would explicitly include, to the extent they are consistent with the purposes of the act, playgrounds, recreational venues, and preservation of historical resources as appropriate purposes. Location: 04/23/2026 - Senate DEAD

Summary: The Municipal Water District Law of 1911 provides for the formation of municipal water districts and grants to those districts specified powers. Current law permits a district to acquire, control, distribute, store, spread, sink, treat, purify, recycle, recapture, and salvage any water for the beneficial use of the district, its inhabitants, or the owners of rights to water in the district. Current law, upon the request of certain Indian tribes and the satisfaction of certain conditions, requires a district to provide service of water at substantially the same terms applicable to the customers of the district to the Indian tribe's lands that are not within a district, as prescribed. Current law also authorizes a district, until January 1, 2027, under specified circumstances, to apply to the applicable local agency formation commission to provide this service of water to Indian lands, as defined, that are not within the district and requires the local agency formation commission to approve that application. This bill would extend the above provisions regarding the application to the applicable local agency formation commission to January 1, 2032. (Based on 01/26/2026 text)

Location: 06/10/2026 - Assembly Privacy and Consumer Protection

Summary: Existing law requires the Department of Technology to conduct, in coordination with other interagency bodies as it deems appropriate, a comprehensive inventory of all high-risk automated decision systems (ADS) that have been proposed for use, development, or procurement by, or are being used, developed, or procured by, any state agency. Existing law establishes the Labor and Workforce Development Agency, which is composed of various departments responsible for protecting and promoting the rights and interests of workers in California, including the Division of Labor Standards Enforcement, led by the Labor Commissioner, within the Department of Industrial Relations. This bill would prohibit an employer, as defined, from using an ADS to perform certain functions and would limit the purposes for and way in which an ADS may be used. The bill would authorize a worker to request, and require an employer to provide, a copy of the most recent 12 months of the worker's own data primarily used by an ADS to make a disciplinary, termination, or deactivation decision, as specified. The bill would require an employer that primarily relied upon an ADS to make a disciplinary, termination, or deactivation decision to provide the affected worker with a written postuse notice, as specified. This bill would prohibit an employer from discharging, threatening to discharge, demoting, suspending, or in any manner discriminating or retaliating against any worker for taking certain actions asserting their rights under the bill. Status: 06/11/2026 - From committee: Do pass and re-refer to Com. on P. & C.P. (Ayes 5. Noes 0.) (June 10). Re-referred to Com. on P. & C.P.

Location: 06/10/2026 - Assembly Privacy and Consumer Protection

Summary: Existing law establishes the Labor and Workforce Development Agency, which is composed of various departments responsible for protecting and promoting the rights and interests of workers in California, including the Division of Labor Standards Enforcement, led by the Labor Commissioner (commissioner), within the Department of Industrial Relations. Existing law establishes the Employment Development Department (EDD), which is administered by the Director of Employment Development. Under existing law, the Director of Employment Development is vested with specified duties, purposes, responsibilities, and jurisdiction related to job creation activity functions, among other things. This bill would establish the California Worker Technological Displacement Act, which would require an employer, as defined, to provide at least a 60-day advanced written notice, as described, before any technological displacement affecting 25 or more workers during any 30-day period. The bill would require an employer to provide that notice to affected workers, the EDD, and specified local entities. The bill would also require an employer to provide a written technology hiring disruption notice to the EDD when it executes a technological cessation in hiring caused in whole by the adoption of artificial intelligence (AI) or other automating technology. [SB 986](#) (Seyarto, R) Major regulations.

Introduced: 02/05/2026

Last Amended: 04/15/2026

Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 4/27/2026)

Location: 05/14/2026 - Senate DEAD

Summary: The Administrative Procedure Act (APA) governs the procedures for the adoption, amendment, or repeal of regulations by state agencies and for the review of those regulatory actions by the Office of Administrative Law (OAL). The APA requires a state agency proposing to adopt, amend, or repeal an administrative regulation to, among other things, assess the potential for adverse economic impact on California business enterprises and individuals, and requires a state agency proposing to adopt, amend, or repeal a major regulation to prepare and submit to the Department of Finance for review, a standardized regulatory impact analysis, as provided. The APA defines "major regulation," for purposes of the act, to mean any proposed adoption, amendment, or repeal of a regulation subject to review by the OAL that will have an economic impact on California business enterprises and individuals in an amount exceeding \$50,000,000, as provided. The APA provides exceptions for emergency regulations in the case of a situation that calls for immediate action to avoid serious harm to the public peace, health, safety, or general welfare. This bill would prohibit a major regulation from taking effect until submission to, and expiration of a 60-day review period by, the Legislature, except as provided for emergency regulations. The bill would, prior to the expiration of the 60-day review period, require the Legislature to hold an informational hearing on the major regulation. (Based on 04/15/2026 text)

[SB 992](#) (Niello, R) County auditors: special districts: annual audit exceptions.

Introduced: 02/05/2026

Status: 06/01/2026 - Referred to Com. on L. GOV.

Location: 06/01/2026 - Assembly Local Government

Summary: Current law requires a county auditor to make or contract with a certified public accountant or public accountant to make an annual audit of the accounts and records of every special district within the county for which an audit is not otherwise provided, as specified. Current law authorizes a special district to replace this annual audit with a financial review, or, until January 1, 2027, an agreed-upon procedures engagement or an annual financial compilation of the special district, if specified conditions are met, including that the special district's annual revenues do not exceed \$150,000. Until January 1, 2027, upon receipt of the financial review, agreed-upon procedures engagement, or financial compilation, current law authorizes a county auditor to appoint a certified public accountant or a public accountant to conduct an audit of the special district, as specified. This bill would remove the January 1, 2027, repeal date referenced above, and would increase the revenue cap described above to \$250,000. (Based on 02/05/2026 text)

[SB 994](#) (Cabaldon, D) Local agencies: nondisclosure agreements.

Introduced: 02/05/2026

Last Amended: 04/23/2026

Status: 06/09/2026 - From committee: Do pass and re-refer to Com. on L. GOV. with recommendation: To consent calendar. (Ayes 12. Noes 0.) (June 9). Re-referred to Com. on L. GOV.

Location: 06/09/2026 - Assembly Local Government

Summary: Existing law, the legislative code of ethics, prohibits Members of the Legislature from entering into, or requesting that another party enter into, a nondisclosure agreement relating to the drafting, negotiation, or discussion of proposed legislation. Existing law also makes any nondisclosure agreement relating to the drafting, negotiation, or discussion of proposed legislation entered into after January 1, 2026, void and unenforceable. Existing law provides an exception for nondisclosure agreements, or portions thereof, that prevent only the disclosure of trade secrets, financial information, or proprietary information, as specified. This bill would prohibit a local agency official, as defined, acting in their official capacity from entering into, or requesting that another

individual enter into, a nondisclosure agreement relating to public business that precludes their ability to share information with fellow local agency officials serving on the same council, board, commission, district, or agency. The bill would require a local agency official in violation of that provision to, among other things, disclose the existence of the nondisclosure agreement, as specified, and would provide that these requirements imposed on a local agency official also apply to a local agency official acting in their official capacity who entered into, or requested that another individual enter into, a nondisclosure agreement described above before January 1, 2027. Status: 05/14/2026 - Failed Deadline pursuant to Rule 61(b)(8). (Last location was APPR. SUSPENSE FILE on 4/27/2026)

Location: 05/14/2026 - Senate DEAD

Summary: Existing law authorizes officers of the Department of the California Highway Patrol, police departments, marshal's office or sheriff's office, and officers or employees of the Department of Forestry and Fire Protection or the Department of Fish and Wildlife designated as peace officers to close to all unauthorized persons an area where a menace to the public health or safety created by a calamity exists for the duration of the menace and the immediate area surrounding any emergency field command post or any other command post activated for the purpose of abating a calamity, riot, or other civil disturbance, as specified. Under existing law, an unauthorized person who enters or remains in a closed area, as prescribed, is guilty of a misdemeanor. This bill would, beginning on July 1, 2028, require the Office of Emergency Services, upon request, to issue a local agency, public utility, or mutual water company responsible for public works and critical infrastructure with specified credentialing to facilitate personnel access to an area during or following a natural disaster, act of terrorism, or other man-made disaster. The bill would specify that the credentialing, a Personal Identity Verification-Interoperable (PIV-I), would conform with the federal Personal Identity Verification standards pursuant to federal National Incident Management System guidelines. Last Amended: 06/04/2026

Status: 06/08/2026 - Read second time. Ordered to third reading.

Location: 06/08/2026 - Assembly THIRD READING

Summary: Existing law requires a public agency to accept specified methods of payment for designated obligations. This bill would authorize a local agency to round the amount of any payment made wholly or partly in cash to the local agency, or any refund or other amount tendered wholly or partly in cash by the local agency, to the nearest \$0.05. The bill would apply to a local agency only if the governing body of the local agency adopts, by majority vote, a resolution to make its provisions applicable to the local agency. The bill would define terms for its purposes. (Based on 06/04/2026 text)

Location: 05/26/2026 - Assembly Water, Parks and Wildlife

Summary: The California Environmental Quality Act (CEQA) requires a lead agency, as defined, to be responsible for determining whether a project is exempt from CEQA and whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required. Existing law requires a city or county that determines a certain type of project is subject to the requirements of CEQA to identify any public water system that may supply water for the project and to request those public water systems to prepare a specified water supply assessment, as provided. This bill, among other things, would instead require a city or county, upon receipt of a preliminary application for a housing development project that meets certain conditions, or upon a development application for certain projects being determined as complete or deemed complete, to make that identification of public water systems. The bill would require a city or county, within 15 days of receiving an application that meets either of the above-mentioned criteria, to request each identified public water system to determine whether the projected water demand associated with the proposed project was included in the most recently adopted urban water management plan. Status: 06/04/2026 - Referred to Coms. on E.D., G., & H.I. and JUD.

Location: 06/04/2026 - Assembly Economic Development, Growth, & Household Impact

Summary: The Administrative Procedure Act requires a state agency proposing to adopt, amend, or repeal an administrative regulation to assess the potential for adverse economic impact on California business enterprises and individuals and avoid the imposition of unnecessary or unreasonable regulations or reporting, recordkeeping, or compliance requirements. The act requires a state agency proposing to adopt, amend, or repeal a major regulation to satisfy additional requirements, including by requiring the state agency to prepare a standardized regulatory impact analysis in the manner prescribed by the Department of Finance, as specified, and requires the analysis to address certain items, including the creation or elimination of jobs within the state and the competitive advantages or disadvantages for businesses currently doing business within the state. This bill would require an agency, in estimating the economic impact of adopting, amending, or repealing a regulation, to identify and calculate any offsetting benefits, impacts, or savings that might result directly or indirectly from that adoption, amendment, or repeal and factor those benefits, impacts, or savings into its economic impact estimate. (Based on 02/17/2026 text)

Location: 06/04/2026 - Assembly Environmental Safety and Toxic Materials

Summary: Existing law requires the State Water Resources Control Board to develop a plan for the funding and implementation of the Low-Income Water Rate Assistance Program. Existing law requires the plan to include, among other things, a description of the method for collecting moneys to support and implement the program and a description of the method for determining the amount of moneys that may need to be collected from water ratepayers to fund the program. This bill would establish the Water Rate Assistance Program. As part of the program, the bill would establish the Water Rate Assistance Fund in the State Treasury, available upon appropriation by the Legislature, to provide water affordability assistance for residential water services to low-income residential ratepayers, as specified. The bill would require the state board to take various actions in administering the fund, including, among other things, tracking and managing revenue in the fund separately from all other revenue. The bill would require the state board, in consultation with relevant agencies and after a public hearing, to adopt guidelines for implementation of the program and to adopt an annual report to be posted on the

state board's internet website identifying how the fund has performed, as specified. The bill would require the guidelines to include minimum requirements for eligible systems, including the ability to confirm eligibility for enrollment through a request for self-certification of eligibility under penalty of perjury. By expanding the crime of perjury, the bill would impose a state-mandated local program. (Based on 06/09/2026 text)

Location: 06/03/2026 - Assembly Appropriations

Summary: Existing law requires, within 7 months after the close of each fiscal year or within the time prescribed by the Controller, whichever is later, the officer of each local agency, as defined, who has charge of the financial records to furnish to the Controller a report of all the financial transactions of the local agency during the preceding fiscal year, as specified. Existing law requires the report to contain underlying data from audited financial statements prepared in accordance with generally accepted accounting principles, as specified, and to state certain information, including the aggregate income during the preceding fiscal year. Existing law requires the legislative body, upon completion of the report, to either post the report in a conspicuous location on its internet website or to cause copies of the report to be prepared and the clerk of the legislative body to furnish a copy to any person requesting it, as specified. This bill would require a local agency, as defined, that maintains an internet website to post its audited financial statements, or its annual comprehensive financial report, on its internet website within 30 days of the date that the statements or report are completed by the local agency, as specified. The bill would make its provisions operative on January 1, 2028. (Based on 05/26/2026 text)

Status: 05/18/2026 - Referred to Com. on W., P., & W.

Location: 05/18/2026 - Assembly Water, Parks and Wildlife

Summary: The Monterey Peninsula Water Management District Law establishes the Monterey Peninsula Water Management District. The act authorizes the district to, among other things, prohibit the use of district water during an emergency caused by drought, or other threatened or existing water shortage, for specific uses that the district finds to be nonessential. Existing law prohibits the use of potable water for the irrigation of nonfunctional turf located on commercial, industrial, and institutional properties, other than a cemetery, and on properties of homeowners' associations, common interest developments, and community service organizations or similar entities, as specified. Existing law requires a person or entity to be subject to civil liability or penalties by the State Water Resources Control Board, as prescribed, or to civil liability and penalties imposed by an urban water supplier, pursuant to a locally adopted ordinance or policy. Existing law authorizes a public water system, city, county, or city and county to enforce the provisions relating to the prohibition, as specified. This bill would require a person or entity to be subject to civil liability or penalties imposed by the Monterey Peninsula Water Management District pursuant to a locally adopted ordinance or policy. Status: 06/09/2026 - From committee with author's amendments. Read second time and amended. Re-referred to Com. on P. & C.P.

Location: 05/18/2026 - Assembly Privacy and Consumer Protection

Summary: The California Constitution provides that people have the right of access to information concerning the conduct of the people's business. Various provisions of existing law, including the California Public Records Act, the Legislative Open Records Act, the Bagley-Keene Open Meeting Act, and the Ralph M. Brown Act, provide, with some exceptions, for public access to government records and meetings of government bodies. Among those acts, the California Public Records Act defines "person" to include any natural person, corporation, partnership, limited liability company, firm, or association. This bill would specify that, for purposes of the California Public Records Act, the Bagley-Keene Open Meeting Act, the Ralph M. Brown Act, the Legislative Open Records Act, the Administrative Procedure Act, the California Coastal Act of 1976, and the California Environmental Quality Act (CEQA), "person," "interested person," "participant," "member of the public," as applicable, and any other similar terms under each act referring to those who may engage with governmental agencies, do not include artificial intelligence, as defined, systems, autonomous agents, or robots, whether physical or digital. Introduced: 02/19/2026

Status: 05/18/2026 - Referred to Com. on L. GOV.

Location: 05/18/2026 - Assembly Local Government

Summary: Existing law, the Ralph M. Brown Act, requires, with specified exceptions, that all meetings of a legislative body, as defined, of a local agency be open and public and that all persons be permitted to attend and participate. Existing law defines "meetings" for these purposes to mean any congregation of a majority of the members of a legislative body at the same time and location, as specified, to hear, discuss, deliberate, or take action on any item that is within the subject matter jurisdiction of the legislative body. This bill would define "majority" for purposes of the act to mean the number of members of the legislative body equaling more than half of the total number of seats on the legislative body. The bill would specify that if a seat on the legislative body is vacant, that seat is to still be counted as a seat on the legislative body. This bill contains other related provisions and other existing laws. (Based on 02/19/2026 text)

Location: 06/09/2026 - Assembly Appropriations

Summary: The Administrative Procedure Act sets forth requirements for the adoption, publication, review, and implementation of regulations by state agencies, and for review of those regulatory actions by the Office of Administrative Law. Existing law requires the office to review regulations on the bases of necessity, authority, clarity, consistency, reference, and nonduplication and requires the office to either approve or disapprove the regulation within 30 working days. If the office disapproves a regulation, existing law requires the office to return it to the adopting agency and include the reasons for disapproval, as specified. This bill would require the office to report a disapproval and the reasons for disapproval to the Legislature within 60 days of returning a regulation to the adopting agency, as specified. Location: 05/14/2026 - Senate DEAD

Summary: Existing law establishes the Safe Drinking Water State Revolving Fund, and moneys in the fund are continuously appropriated to the State Water Resources Control Board for the provision of grants and revolving fund loans to provide for the design and construction of projects for public water systems that will enable suppliers to meet safe drinking water standards. Existing law provides that moneys in the fund and its special accounts may be expended for additional purposes provided in the federal Safe Drinking Water Act. This bill would provide that moneys in the fund and its special accounts may be considered eligible and expended for projects that address perfluoroalkyl and polyfluoroalkyl substances in drinking water. By expanding the purposes for which a continuously appropriated fund may be expended, the bill would make an appropriation. (Based on 04/27/2026 text)

MEMORANDUM

TO: Board of Directors
FROM: Stacy Taylor, Water Policy Manager
DATE: June 24, 2026
SUBJECT: Orange County Advocacy Update

RECOMMENDATION

Receive and file the Orange County Advocacy Update.

STRATEGIC PLAN

Goal #7: Actively participate in regional and statewide water issues.

PRIOR BOARD ACTION/DISCUSSION

This item is provided monthly at a Mesa Water District (Mesa Water®) Board of Directors (Board) meeting.

DISCUSSION

Mesa Water's governmental relations program includes monitoring local and regional political issues and policy-setting authorities (e.g., County of Orange, Orange County Local Agency Formation Commission). Attached is the Orange County Advocacy Report. At the Board's June 24, 2026 meeting, Mesa Water staff will provide a verbal report on any actionable, relevant and/or timely issues.

FINANCIAL IMPACT

In Fiscal Year 2026, \$450,000 is budgeted for Water Policy Support Services; \$349,920 has been spent to date.

ATTACHMENTS

Attachment A: Orange County Advocacy Report (including 2026 Primary Election Recap)

THE COUNTY OF ORANGE REPORT (MAY 19 – JUNE 16, 2026)

Prepared for Mesa Water District by Venture Strategic

COUNTY OF ORANGE UPDATES

Governance, Legal, & Accountability

Supervisors Divided on Contracts with Senior Services Providers

The Board of Supervisors was divided on renewing approximately \$23 million in annual contracts with senior services providers (including Meals on Wheels Orange County and Age Well Senior Services) that had prior legal disputes with the county. The items initially failed on a 2-1 vote with one abstention at the May 19 meeting; Supervisor Katrina Foley called for a revote. On June 11, the Board ultimately extended the contracts.

Orange County Proposes \$10.5 Billion Budget

The county proposed a \$10.5 billion budget for fiscal year 2026-27. The Board of Supervisors held a hearing on June 9; outgoing CEO Michelle Aguirre warned of a “dangerous budget future” due to structural deficits, rising costs, and limited revenue growth. Adoption is scheduled for June 23.

Supervisors Discuss Allocation of \$3.7 Million Recovered in Andrew Do Scandal

The Board discussed directing \$3.7 million recovered from the Andrew Do corruption case back to former District 1 constituents for community programs. Most supervisors supported the idea, with formal action expected later.

OC Grand Jury Questions Supervisors’ Discretionary Dollars

The Orange County Grand Jury questioned why supervisors need millions in discretionary funds, raising concerns about transparency and potential misuse.

Public Safety

Deaths, Crashes, and Arrests Prompt E-Bike Concerns

Orange County continued to grapple with rising e-bike-related deaths, crashes, and arrests; the District Attorney’s Office expanded enforcement efforts.

Final DA Harassment Lawsuit Settles for \$100,000

The last remaining lawsuit related to former prosecutor Gary LoGalbo, alleging harassment and retaliation in the District Attorney’s Office, settled for \$100,000.

Health, Social Services, & Immigration

OC Homeless Population Shrinks

The 2026 Point-in-Time Count showed Orange County's homeless population dropped 13.7% to 6,321 people (from 7,322 in 2024). For the first time, more people were counted in shelters (3,256) than unsheltered (3,065). Officials could not fully explain the reduction and noted ongoing challenges with shelter-to-housing transitions.

Federal Grant Policies Leave Domestic Violence Programs in Limbo

Shifting federal grant rules have created uncertainty and funding gaps for domestic violence programs in Orange County.

OC Officials Decline to Renew Black Infant Health Program Funding

County officials decided not to pursue renewal of funding for a program aimed at improving Black infant health outcomes.

Infrastructure & Environment

Garden Grove Chemical Tank Emergency (County Response)

A pressurized tank containing methyl methacrylate at GKN Aerospace in Garden Grove overheated, prompting a state of emergency declaration by Governor Newsom, evacuation orders for up to 50,000 residents, and federal assistance. The tank was stabilized by late May with no explosion or major leak; a \$3 million fund was created to help impacted residents, and officials faced criticism over communication and industrial regulations. Garden Grove and Stanton demanded accountability.

Oversight Criticized in Garden Grove Chemical Threat

An OC Register editorial criticized oversight in the lead-up to the Garden Grove chemical tank emergency, questioning whether regulators and the company had adequate maintenance and emergency preparedness, especially given GKN Aerospace's prior 2021 environmental violations.

Veterans Cemetery at Gypsum Canyon Advances

The state VA approved the Orange County veterans cemetery project; a new study found it should cost less than previously estimated.

Political

Board of Supervisors – District 2

Incumbent Vicente Sarmiento advanced with ~63%.

**Board of Supervisors – District 4**

Tim Shaw and Connor Traut advanced to the November runoff.

Board of Supervisors – District 5

Incumbent Katrina Foley and Diane Dixon are headed to a tight November runoff.

Tax Assessor

Incumbent Claude Parrish advanced with ~74% over challenger Janet Keo Conklin.

Clerk-Recorder

Incumbent Hugh Nguyen advanced with ~72% over challenger Maria Holly Barraza.

Auditor-Controller

Incumbent Andrew N. Hamilton advanced unopposed.

Treasurer-Tax Collector

Incumbent Shari Freidenrich led strongly over challenger Dana Schultz.

Orange County Board of Education

Area 5: Incumbent Lisa Sparks led strongly over challenger Jason Sams and advanced.

Orange County Superintendent of Schools

Incumbent Stefan Bean advanced essentially unopposed.

Superior Court Judge Office No. 13

Robert Mestman led with ~53–55% over Ann Cho.

Superior Court Judge Office No. 41

Incumbent Ami S. Sagel led with ~67% over Charles E. Pell.

COSTA MESA AND NEWPORT BEACH UPDATES**Costa Mesa Skatepark Expansion Breaks Ground**

Construction began on the Volcom Skatepark expansion, with completion expected by spring 2027.

Erewhon Market Coming to Costa Mesa

Upscale grocer Erewhon announced plans to open a location in Costa Mesa.

OTHER CITY UPDATES

Fullerton City Budget Delayed

Fullerton delayed its city budget presentation pending the results of a forensic audit into a \$10 million budget discrepancy.

Irvine City Manager to Step Down

Irvine's city manager announced plans to retire.

Laguna Beach Considers Business and Hotel Tax Increases

Laguna Beach explored business and hotel tax increases to address budget needs.

Orange Sales Tax Measure

The Orange City Council voted 5-1 on June 3 to place a one-cent sales tax increase (lasting 13 years) on the November ballot to address ongoing budget shortfalls. Officials warned of potential municipal bankruptcy or severe service cuts if the measure fails.

SPECIAL DISTRICT UPDATES

No major updates.

MESA WATER CUSTOMER UPDATES

No major updates.

POLITICAL AND STATE UPDATES

Becerra and Hilton Advance to Runoff in Governor's Race

Xavier Becerra and Steve Hilton emerged as the top two finishers in the June 2 primary and will face off in the November general election for California governor.

Homekey Audit Exposes California's Homelessness Crisis

A state audit of the Homekey program highlighted governance failures contributing to California's ongoing homelessness challenges.

New California Bill Aims to Help Those Impacted by Garden Grove Chemical Emergency

Legislation was introduced to provide additional support and reimbursement for residents and businesses affected by the chemical tank incident.

Orange County 2026 Primary Election Recap

Mesa Water District Service Area

Statewide Direct Primary — June 2, 2026

Preliminary results as of the Orange County Registrar update, June 15, 2026.

PRELIMINARY RESULTS: These are unofficial totals and will change as remaining provisional and other ballots are counted. Leads, margins, and the order of finish (including which candidates advance) may still shift. The Registrar certifies results on June 26, and the Secretary of State by July 10.

Congressional, State Senate, and State Assembly figures are districtwide totals (all counties combined).

★ Won outright (>50%) **Bold** = advances to Nov. 3 runoff (top two)

OPEN SEAT flags are noted beneath the relevant contests.

Key Takeaways

- **Supervisor District 5 is the marquee local race.** District 5, which includes Costa Mesa and Newport Beach, is headed to a November runoff in which incumbent Katrina Foley (D) narrowly leads challenger Diane Dixon (R), 46.99% to 46.80%, a margin of 333 votes. The outcome will help determine the partisan balance of the Board of Supervisors.
- **Countywide offices: clean incumbent sweep.** Parrish, Hamilton, Nguyen, Freidenrich, Bean, and Sparks all won outright or ran unopposed.
- **Legislative seats serving the district are held by incumbents.** In the service area's state and federal races, the incumbents lead: Dave Min (D) in CD-47 and Tony Strickland (R) in SD-36, both of whom finished first. AD-72, the open Assembly seat covering Costa Mesa and Newport Beach (vacated by Diane Dixon's supervisor run), is the one to watch.
- **AD-72 is close and competitive.** In the open Assembly District 72, Chris Kluwe (D, 43.8%) leads Gracey Van Der Mark (R, 37.7%), with the two trailing Republicans' combined vote exceeding Kluwe's. If the Republican vote consolidates, the seat could lean Republican in November.

Caveat: Late-counted vote-by-mail ballots in Orange County have historically skewed Democratic, which could shift the closest margins, including Supervisor District 5 and AD-72, as counting continues.

Board of Supervisors

District 5

Orange County cities: Aliso Viejo, Costa Mesa, Dana Point, much of Irvine, Laguna Beach, Laguna Hills, Laguna Niguel, Laguna Woods, Newport Beach, San Clemente, San Juan Capistrano, and south county unincorporated areas
